<b>Preface to the first edition</b>	<b>vii</b>
<b>Preface to the second edition</b>	<b>xiii</b>
<b>12 Metric spaces</b>	<b>349</b>
12.1 Definitions and examples . . . . .	349
12.2 Some point-set topology of metric spaces . . . . .	358
12.3 Relative topology . . . . .	363
12.4 Cauchy sequences and complete metric spaces . . . . .	365
12.5 Compact metric spaces . . . . .	369
<b>13 Continuous functions on metric spaces</b>	<b>376</b>
13.1 Continuous functions . . . . .	376
13.2 Continuity and product spaces . . . . .	379
13.3 Continuity and compactness . . . . .	382
13.4 Continuity and connectedness . . . . .	384
13.5 Topological spaces (Optional) . . . . .	387
<b>14 Uniform convergence</b>	<b>393</b>
14.1 Limiting values of functions . . . . .	394
14.2 Pointwise and uniform convergence . . . . .	396
14.3 Uniform convergence and continuity . . . . .	401
14.4 The metric of uniform convergence . . . . .	404
14.5 Series of functions; the Weierstrass <i>M</i> -test . . . . .	406
14.6 Uniform convergence and integration . . . . .	409
14.7 Uniform convergence and derivatives . . . . .	411
14.8 Uniform approximation by polynomials . . . . .	414
<b>15 Power series</b>	<b>423</b>
15.1 Formal power series . . . . .	423
15.2 Real analytic functions . . . . .	426

15.3	Abel's theorem . . . . .	431
15.4	Multiplication of power series . . . . .	435
15.5	The exponential and logarithm functions . . . . .	438
15.6	A digression on complex numbers . . . . .	441
15.7	Trigonometric functions . . . . .	449
<b>16</b>	<b>Fourier series</b>	<b>455</b>
16.1	Periodic functions . . . . .	456
16.2	Inner products on periodic functions . . . . .	458
16.3	Trigonometric polynomials . . . . .	462
16.4	Periodic convolutions . . . . .	464
16.5	The Fourier and Plancherel theorems . . . . .	469
<b>17</b>	<b>Several variable differential calculus</b>	<b>475</b>
17.1	Linear transformations . . . . .	475
17.2	Derivatives in several variable calculus . . . . .	482
17.3	Partial and directional derivatives . . . . .	485
17.4	The several variable calculus chain rule . . . . .	492
17.5	Double derivatives and Clairaut's theorem . . . . .	495
17.6	The contraction mapping theorem . . . . .	497
17.7	The inverse function theorem in several variable calculus . . . . .	500
17.8	The implicit function theorem . . . . .	505
<b>18</b>	<b>Lebesgue measure</b>	<b>510</b>
18.1	The goal: Lebesgue measure . . . . .	512
18.2	First attempt: Outer measure . . . . .	514
18.3	Outer measure is not additive . . . . .	522
18.4	Measurable sets . . . . .	524
18.5	Measurable functions . . . . .	531
<b>19</b>	<b>Lebesgue integration</b>	<b>535</b>
19.1	Simple functions . . . . .	535
19.2	Integration of non-negative measurable functions . . . . .	541
19.3	Integration of absolutely integrable functions . . . . .	549
19.4	Comparison with the Riemann integral . . . . .	553
19.5	Fubini's theorem . . . . .	555
	<b>Index</b>	<b>561</b>
