
Table of Contents

Preface.....	xiii
--------------	------

Part I. Python and Finance

1. Why Python for Finance.....	3
The Python Programming Language	3
A Brief History of Python	5
The Python Ecosystem	6
The Python User Spectrum	7
The Scientific Stack	8
Technology in Finance	9
Technology Spending	9
Technology as Enabler	10
Technology and Talent as Barriers to Entry	11
Ever-Increasing Speeds, Frequencies, and Data Volumes	11
The Rise of Real-Time Analytics	13
Python for Finance	14
Finance and Python Syntax	14
Efficiency and Productivity Through Python	18
From Prototyping to Production	23
Data-Driven and AI-First Finance	24
Data-Driven Finance	24
AI-First Finance	28
Conclusion	31
Further Resources	31

2. Python Infrastructure.....	33
conda as a Package Manager	35
Installing Miniconda	35
Basic Operations with conda	37
conda as a Virtual Environment Manager	41
Using Docker Containers	45
Docker Images and Containers	45
Building an Ubuntu and Python Docker Image	46
Using Cloud Instances	50
RSA Public and Private Keys	51
Jupyter Notebook Configuration File	52
Installation Script for Python and Jupyter Notebook	53
Script to Orchestrate the Droplet Setup	55
Conclusion	56
Further Resources	57

Part II. Mastering the Basics

3. Data Types and Structures.....	61
Basic Data Types	62
Integers	62
Floats	63
Booleans	66
Strings	69
Excursion: Printing and String Replacements	71
Excursion: Regular Expressions	74
Basic Data Structures	75
Tuples	75
Lists	76
Excursion: Control Structures	78
Excursion: Functional Programming	80
Dicts	81
Sets	82
Conclusion	84
Further Resources	84
4. Numerical Computing with NumPy.....	85
Arrays of Data	86
Arrays with Python Lists	86
The Python array Class	88
Regular NumPy Arrays	90

The Basics	90
Multiple Dimensions	94
Metainformation	97
Reshaping and Resizing	98
Boolean Arrays	101
Speed Comparison	103
Structured NumPy Arrays	105
Vectorization of Code	106
Basic Vectorization	107
Memory Layout	110
Conclusion	112
Further Resources	112
5. Data Analysis with pandas.....	113
The DataFrame Class	114
First Steps with the DataFrame Class	114
Second Steps with the DataFrame Class	119
Basic Analytics	123
Basic Visualization	126
The Series Class	128
GroupBy Operations	130
Complex Selection	132
Concatenation, Joining, and Merging	135
Concatenation	136
Joining	137
Merging	139
Performance Aspects	141
Conclusion	143
Further Reading	143
6. Object-Oriented Programming.....	145
A Look at Python Objects	149
int	149
list	150
ndarray	151
DataFrame	152
Basics of Python Classes	154
Python Data Model	159
The Vector Class	163
Conclusion	164
Further Resources	164

Part III. Financial Data Science

7. Data Visualization.....	167
Static 2D Plotting	168
One-Dimensional Data Sets	169
Two-Dimensional Data Sets	176
Other Plot Styles	183
Static 3D Plotting	191
Interactive 2D Plotting	195
Basic Plots	195
Financial Plots	199
Conclusion	203
Further Resources	204
8. Financial Time Series.....	205
Financial Data	206
Data Import	206
Summary Statistics	210
Changes over Time	212
Resampling	215
Rolling Statistics	217
An Overview	218
A Technical Analysis Example	220
Correlation Analysis	222
The Data	222
Logarithmic Returns	224
OLS Regression	226
Correlation	227
High-Frequency Data	228
Conclusion	230
Further Resources	230
9. Input/Output Operations.....	231
Basic I/O with Python	232
Writing Objects to Disk	232
Reading and Writing Text Files	236
Working with SQL Databases	239
Writing and Reading NumPy Arrays	242
I/O with pandas	245
Working with SQL Databases	246
From SQL to pandas	247
Working with CSV Files	250

Working with Excel Files	252
I/O with PyTables	253
Working with Tables	254
Working with Compressed Tables	261
Working with Arrays	263
Out-of-Memory Computations	265
I/O with TsTables	268
Sample Data	268
Data Storage	270
Data Retrieval	271
Conclusion	273
Further Resources	274
10. Performance Python.....	275
Loops	276
Python	277
NumPy	278
Numba	279
Cython	280
Algorithms	282
Prime Numbers	282
Fibonacci Numbers	286
The Number Pi	290
Binomial Trees	294
Python	294
NumPy	296
Numba	297
Cython	298
Monte Carlo Simulation	299
Python	300
NumPy	302
Numba	303
Cython	303
Multiprocessing	304
Recursive pandas Algorithm	305
Python	306
Numba	308
Cython	308
Conclusion	309
Further Resources	310

11. Mathematical Tools.....	311
Approximation	312
Regression	313
Interpolation	324
Convex Optimization	328
Global Optimization	329
Local Optimization	331
Constrained Optimization	332
Integration	334
Numerical Integration	336
Integration by Simulation	337
Symbolic Computation	337
Basics	338
Equations	340
Integration and Differentiation	340
Differentiation	341
Conclusion	343
Further Resources	343
12. Stochastics.....	345
Random Numbers	346
Simulation	352
Random Variables	353
Stochastic Processes	356
Variance Reduction	372
Valuation	375
European Options	376
American Options	380
Risk Measures	383
Value-at-Risk	383
Credit Valuation Adjustments	388
Python Script	392
Conclusion	394
Further Resources	395
13. Statistics.....	397
Normality Tests	398
Benchmark Case	399
Real-World Data	409
Portfolio Optimization	415
The Data	416
The Basic Theory	417

Optimal Portfolios	421
Efficient Frontier	424
Capital Market Line	425
Bayesian Statistics	429
Bayes' Formula	429
Bayesian Regression	430
Two Financial Instruments	435
Updating Estimates over Time	439
Machine Learning	444
Unsupervised Learning	444
Supervised Learning	448
Conclusion	462
Further Resources	463

Part IV. Algorithmic Trading

14. The FXCM Trading Platform.....	467
Getting Started	469
Retrieving Data	469
Retrieving Tick Data	470
Retrieving Candles Data	472
Working with the API	474
Retrieving Historical Data	475
Retrieving Streaming Data	477
Placing Orders	478
Account Information	480
Conclusion	480
Further Resources	481
15. Trading Strategies.....	483
Simple Moving Averages	484
Data Import	485
Trading Strategy	485
Vectorized Backtesting	487
Optimization	489
Random Walk Hypothesis	491
Linear OLS Regression	494
The Data	495
Regression	497
Clustering	499
Frequency Approach	501

Classification	504
Two Binary Features	504
Five Binary Features	506
Five Digitized Features	508
Sequential Train-Test Split	509
Randomized Train-Test Split	511
Deep Neural Networks	512
DNNs with scikit-learn	512
DNNs with TensorFlow	515
Conclusion	519
Further Resources	519
16. Automated Trading.....	521
Capital Management	522
The Kelly Criterion in a Binomial Setting	522
The Kelly Criterion for Stocks and Indices	527
ML-Based Trading Strategy	532
Vectorized Backtesting	533
Optimal Leverage	537
Risk Analysis	539
Persisting the Model Object	543
Online Algorithm	544
Infrastructure and Deployment	546
Logging and Monitoring	547
Conclusion	550
Python Scripts	550
Automated Trading Strategy	550
Strategy Monitoring	553
Further Resources	554

Part V. Derivatives Analytics

17. Valuation Framework.....	557
Fundamental Theorem of Asset Pricing	558
A Simple Example	558
The General Results	559
Risk-Neutral Discounting	560
Modeling and Handling Dates	561
Constant Short Rate	563
Market Environments	565
Conclusion	568

Further Resources	569
18. Simulation of Financial Models.....	571
Random Number Generation	572
Generic Simulation Class	574
Geometric Brownian Motion	577
The Simulation Class	578
A Use Case	580
Jump Diffusion	582
The Simulation Class	583
A Use Case	585
Square-Root Diffusion	587
The Simulation Class	588
A Use Case	590
Conclusion	591
Further Resources	592
19. Derivatives Valuation.....	595
Generic Valuation Class	596
European Exercise	600
The Valuation Class	600
A Use Case	602
American Exercise	607
Least-Squares Monte Carlo	608
The Valuation Class	609
A Use Case	611
Conclusion	614
Further Resources	616
20. Portfolio Valuation.....	617
Derivatives Positions	618
The Class	619
A Use Case	620
Derivatives Portfolios	622
The Class	622
A Use Case	626
Conclusion	634
Further Resources	635
21. Market-Based Valuation.....	637
Options Data	638
Model Calibration	641

Relevant Market Data	641
Option Modeling	643
Calibration Procedure	646
Portfolio Valuation	651
Modeling Option Positions	652
The Options Portfolio	653
Python Code	654
Conclusion	656
Further Resources	657
A. Dates and Times.....	659
B. BSM Option Class.....	673
Index.....	679
