<b>Preface</b>	<b>xi</b>
<b>I Symmetric groups and symmetric functions</b>	<b>1</b>
<b>1 Representations of finite groups and semisimple algebras</b>	<b>3</b>
1.1 Finite groups and their representations . . . . .	3
1.2 Characters and constructions on representations . . . . .	13
1.3 The non-commutative Fourier transform . . . . .	18
1.4 Semisimple algebras and modules . . . . .	27
1.5 The double commutant theory . . . . .	40
<b>2 Symmetric functions and the Frobenius–Schur isomorphism</b>	<b>49</b>
2.1 Conjugacy classes of the symmetric groups . . . . .	50
2.2 The five bases of the algebra of symmetric functions . . . . .	54
2.3 The structure of graded self-adjoint Hopf algebra . . . . .	69
2.4 The Frobenius–Schur isomorphism . . . . .	78
2.5 The Schur–Weyl duality . . . . .	87
<b>3 Combinatorics of partitions and tableaux</b>	<b>99</b>
3.1 Pieri rules and Murnaghan–Nakayama formula . . . . .	99
3.2 The Robinson–Schensted–Knuth algorithm . . . . .	108
3.3 Construction of the irreducible representations . . . . .	131
3.4 The hook-length formula . . . . .	140
<b>II Hecke algebras and their representations</b>	<b>147</b>
<b>4 Hecke algebras and the Brauer–Cartan theory</b>	<b>149</b>
4.1 Coxeter presentation of symmetric groups . . . . .	151
4.2 Representation theory of algebras . . . . .	161
4.3 Brauer–Cartan deformation theory . . . . .	173
4.4 Structure of generic and specialized Hecke algebras . . . . .	183
4.5 Polynomial construction of the $q$ -Specht modules . . . . .	207
<b>5 Characters and dualities for Hecke algebras</b>	<b>217</b>
5.1 Quantum groups and their Hopf algebra structure . . . . .	218
5.2 Representation theory of the quantum groups . . . . .	230
5.3 Jimbo–Schur–Weyl duality . . . . .	252

5.4	Iwahori–Hecke duality . . . . .	263
5.5	Hall–Littlewood polynomials and characters of Hecke algebras . . . . .	272
<b>6</b>	<b>Representations of the Hecke algebras specialized at <math>q = 0</math></b>	<b>287</b>
6.1	Non-commutative symmetric functions . . . . .	289
6.2	Quasi-symmetric functions . . . . .	299
6.3	The Hecke–Frobenius–Schur isomorphisms . . . . .	306
<b>III</b>	<b>Observables of partitions</b>	<b>325</b>
<b>7</b>	<b>The Ivanov–Kerov algebra of observables</b>	<b>327</b>
7.1	The algebra of partial permutations . . . . .	328
7.2	Coordinates of Young diagrams and their moments . . . . .	339
7.3	Change of basis in the algebra of observables . . . . .	347
7.4	Observables and topology of Young diagrams . . . . .	354
<b>8</b>	<b>The Jucys–Murphy elements</b>	<b>375</b>
8.1	The Gelfand–Tsetlin subalgebra of the symmetric group algebra . . . . .	375
8.2	Jucys–Murphy elements acting on the Gelfand–Tsetlin basis . . . . .	387
8.3	Observables as symmetric functions of the contents . . . . .	396
<b>9</b>	<b>Symmetric groups and free probability</b>	<b>401</b>
9.1	Introduction to free probability . . . . .	402
9.2	Free cumulants of Young diagrams . . . . .	418
9.3	Transition measures and Jucys–Murphy elements . . . . .	426
9.4	The algebra of admissible set partitions . . . . .	431
<b>10</b>	<b>The Stanley–Féray formula and Kerov polynomials</b>	<b>451</b>
10.1	New observables of Young diagrams . . . . .	451
10.2	The Stanley–Féray formula for characters of symmetric groups . . . . .	464
10.3	Combinatorics of the Kerov polynomials . . . . .	479
<b>IV</b>	<b>Models of random Young diagrams</b>	<b>499</b>
<b>11</b>	<b>Representations of the infinite symmetric group</b>	<b>501</b>
11.1	Harmonic analysis on the Young graph and extremal characters . . . . .	502
11.2	The bi-infinite symmetric group and the Olshanski semigroup . . . . .	511
11.3	Classification of the admissible representations . . . . .	527
11.4	Spherical representations and the GNS construction . . . . .	538
<b>12</b>	<b>Asymptotics of central measures</b>	<b>547</b>
12.1	Free quasi-symmetric functions . . . . .	548
12.2	Combinatorics of central measures . . . . .	562
12.3	Gaussian behavior of the observables . . . . .	576

<b>13 Asymptotics of Plancherel and Schur–Weyl measures</b>	<b>595</b>
13.1 The Plancherel and Schur–Weyl models . . . . .	596
13.2 Limit shapes of large random Young diagrams . . . . .	602
13.3 Kerov’s central limit theorem for characters . . . . .	614
<b>Appendix</b>	<b>629</b>
<b>Appendix A Representation theory of semisimple Lie algebras</b>	<b>631</b>
A.1 Nilpotent, solvable and semisimple algebras . . . . .	631
A.2 Root system of a semisimple complex algebra . . . . .	635
A.3 The highest weight theory . . . . .	641
