

Contents

Part I Advanced Analysis and Forecasting Methods

A Direct Method for the Langevin-Analysis of Multidimensional Stochastic Processes with Strong Correlated Measurement Noise	3
Teresa Scholz, Frank Raischel, Pedro G. Lind, Matthias Wächter, Vitor V. Lopes, and Bernd Lehle	
Threshold Autoregressive Models for Directional Time Series	13
Mahayaudin M. Mansor, Max E. Glonek, David A. Green, and Andrew V. Metcalfe	
Simultaneous Statistical Inference in Dynamic Factor Models	27
Thorsten Dickhaus and Markus Pauly	
The Relationship Between the Beveridge–Nelson Decomposition and Exponential Smoothing	47
V́ctor Ǵmez	
Permutation Entropy and Order Patterns in Long Time Series	61
Christoph Bandt	
Generative Exponential Smoothing and Generative ARMA Models to Forecast Time-Variant Rates or Probabilities	75
Edgar Kalkowski and Bernhard Sick	
First-Passage Time Properties of Correlated Time Series with Scale-Invariant Behavior and with Crossovers in the Scaling	89
Pedro Carpena, Ana V. Coronado, Concepción Carretero-Campos, Pedro Bernaola-Galv́n, and Plamen Ch. Ivanov	

Part II Theoretical and Applied Econometrics

The Environmental Impact of Economic Activity on the Planet.....	105
José Aureliano Martín Segura, César Pérez López, and José Luis Navarro Espigares	
Stock Indices in Emerging and Consolidated Economies from a Fractal Perspective	113
María Antonia Navascués, Maria Victoria Sebastián, and Miguel Latorre	
Value at Risk with Filtered Historical Simulation	123
Mária Bohdalová and Michal Greguš	
A SVEC Model to Forecast and Perform Structural Analysis (Shocks) for the Mexican Economy, 1985Q1 –2014Q4	135
Eduardo Loría and Emmanuel Salas	
Intraday Data vs Daily Data to Forecast Volatility in Financial Markets	147
António A.F. Santos	
Predictive and Descriptive Qualities of Different Classes of Models for Parallel Economic Development of Selected EU-Countries	161
Jozef Komorník and Magdaléna Komorníková	
Search and Evaluation of Stock Ranking Rules Using Internet Activity Time Series and Multiobjective Genetic Programming.....	175
Martin Jakubéci and Michal Greguš	
Integer-Valued APARCH Processes	189
Maria da Conceição Costa, Manuel G. Scotto, and Isabel Pereira	
Part III Applications in Time Series Analysis and Forecasting	
Emergency-Related, Social Network Time Series: Description and Analysis	205
Horia-Nicolai Teodorescu	
Competitive Models for the Spanish Short-Term Electricity Demand Forecasting	217
J. Carlos García-Díaz and Óscar Trull	
Age-Specific Death Rates Smoothed by the Gompertz–Makeham Function and Their Application in Projections by Lee–Carter Model	233
Ondřej Šimpach and Petra Dotlačilová	
An Application of Time Series Analysis in Judging the Working State of Ground-Based Microwave Radiometers and Data Calibration ...	247
Zhenhui Wang, Qing Li, Jiansong Huang, and Yanli Chu	

Identifying the Best Performing Time Series Analytics for Sea Level Research	261
Phil. J. Watson	
Modellation and Forecast of Traffic Series by a Stochastic Process	279
Desiree Romero, Nuria Rico, and M. Isabel Garcia-Arenas	
Spatio-Temporal Modeling for fMRI Data	293
Wenjie Chen, Haipeng Shen, and Young K. Truong	
Part IV Machine Learning Techniques in Time Series Analysis and Prediction	
Communicating Artificial Neural Networks with Physical-Based Flow Model for Complex Coastal Systems	315
Bernard B. Hsieh	
Forecasting Daily Water Demand Using Fuzzy Cognitive Maps	329
Jose L. Salmeron, Wojciech Froelich, and Elpiniki I. Papageorgiou	
Forecasting Short-Term Demand for Electronic Assemblies by Using Soft-Rules	341
Tamás Jónás, József Dombi, Zsuzsanna Eszter Tóth, and Pál Dömötör	
Electrical Load Forecasting: A Parallel Seasonal Approach	355
Oussama Ahmia and Nadir Farah	
A Compounded Multi-resolution-Artificial Neural Network Method for the Prediction of Time Series with Complex Dynamics	367
Livio Fenga
