Contents

Preface 1

1. Fluctuations in Major Economic Variables 7

1.1. Periodic Patterns and Stylized Facts 8

1.2. The Measurement of the Business Cycle 12

1.2.1. Economic Indicators 13

1.2.1.1. Harvard Barometer 13

1.2.1.2. NBER Indicators 14

1.2.1.3. Indicators in Germany 21

1.2.1.4. Diagnosis and Prognosis by Means of Indicators 25

1.2.2. Capacity Utilization 26

1.2.2.1. Concepts Based on Single Factors of Production 29

1.2.2.2. Concepts Based on Production Functions 33

1.2.2.3. Wharton School Index and Surveys 38

2. Shock-Dependent Business Cycle Theories 41

2.1. Discrete-Time Shock-Dependent Models 42

2.1.1. Linear Models of the Cycle 42

2.1.1.1. The Basic Samuelson Model 42

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.1.1.2. Hicks' Linear Accelerator 49
2.1.1.3. The Influence of Inventories 53
2.1.1.4. Monetary Aspects of the Cycle 56
2.1.2. Non-Linear Multiplier-Accelerator Models 59
2.1.2.1. Ceiling and Floor in the Hicks Model 60
2.1.2.2. The Influence of Ratchet Effects 63
2.2. Continuous-Time Shock-Dependent Models 69
2.3. The Kalecki Model and Mixed Difference-Differential Equations 71
2.4. The Relevance of Shock-Dependent Business Cycle Theories 76

3. Business Cycle Theory and Exogenous Shocks 77
3.1. The Political Business Cycle 78
3.1.1. Governmental Behavior as the Cause of Business Cycles 80
3.1.2. Implications of the Political Business Cycle 84
3.2. The Theory of Stochastic Business Cycles 86
3.2.1. Business Cycle Models with Stochastic Exogenous Influences 87
3.2.2. A Stochastic Business Cycle Model 90
3.3. The Rational Expectations Approach to Business Cycles 94
3.3.1. Expectations and Rationality in Economic Theory 95
3.3.2. The New Classical Macroeconomics 100
3.3.3. Rational Expectations Business Cycle Models 104

4. Shock-Independent Business Cycle Theories 114
4.1. A Linear Shock-Independent Growth Cycle Model 115
4.2. Goodwin's Quasi-Non-Linear Accelerator 118
4.3. Non-Linear Theories of the Cycle 122
4.3.1. Kaldor's Non-Linear Investment and Savings Functions 122
4.3.2. The Poincaré-Bendixson Theorem and the Existence of Limit Cycles 129
4.3.2.1. Chang/Smyth's Reformulation of the Kaldor Model 132
4.3.2.2. The Non-Linear Phillips Curve and the Cycle 136
4.3.2.3. Non-Walrasian Macroeconomics and the Business Cycle 143
4.3.3. Predator-Prey Interpretations of the Business Cycle 151
4.3.4. The Liénard-van der Pol Equation 156
4.3.4.1. The Uniqueness of Limit Cycles 156

4.3.4.2. The Kaldor Model as a Liénard Equation 158
4.3.5. The Hopf Bifurcation in Business Cycle Theory 161
4.3.5.1. The Hopf Bifurcation in the Continuous-Time Case 162
4.3.5.2. The Hopf Bifurcation in the Discrete-Time Case 170

5. Complex Motion in Business Cycle Models 174
5.1. Non-Linearities and Chaotic Movements 175
5.1.1. Chaos in Discrete-Time Models 177
5.1.2. Chaos and Business Cycles 184
5.1.3. Chaos in Higher-Dimensional Systems 188
5.1.4. Numerical Techniques and the Empirical Evidence of Chaos 194
5.2. Catastrophe Theory and Business Cycle Theory 202
5.2.1. Basic Ideas of Catastrophe Theory 202
5.2.2. The Kaldor Model in the Light of Catastrophe Theory 209
5.3. Structural Instability and Business Cycle Theory - Conclusions 215
