Foreword: Cognitive Foundations for Improving Mathematical Learning <i>Ann Dowker</i>	xiii
Preface	xxi
1. Introduction: Cognitive Foundations for Improving Mathematical Learning	1
<i>David C. Geary, Daniel B. Berch, and Kathleen Mann Koepke</i>	
Introduction	1
Brief History of Mathematics Intervention Studies	2
Methodological Issues in Intervention Research	3
Design Factors	3
Fidelity of Implementation	5
Diminishing Intervention Impacts Across Time (Fadeout)	5
Transfer	7
What Are the Cognitive Foundations for Improving Mathematics Learning?	8
Domain-General Components	10
Domain-General Interventions	14
Domain-Specific Components	15
Domain-Specific Interventions	16
Domain-Relevant Interventions	18
Parental Influences on Child Cognition and Mathematical Learning	22
A Brief History of Research on Parental Influences	23
Research on Children's Home Numeracy Environment	24
Methodological Issues	25
Conclusion	25
References	26
2. The Effects of SES, Grade-Repeating, and IQ in a Game-Based Approximate Math Intervention	37
<i>Josh Langfus, Alejandro Maiche, Dinorah De León, Dahiana Fitipalde, Álvaro Mailhos, and Justin Halberda</i>	
Introduction	37
The Uruguayan Context	38

Background for the Current Study	42
Socioeconomic Status in Education	42
Classroom Geometric and Arithmetic Abilities	42
Approximate Number Abilities	43
The Present Intervention Study	45
Teachers' Responses to the Software	46
Design of the Current Study	47
Methods	48
Results	52
Conclusions and Future Directions	62
References	65
 3. Role of Play and Games in Building Children's Foundational Numerical Knowledge	 69
<i>Geetha B. Ramani, Emily N. Daubert, and Nicole R. Scalise</i>	
Introduction	69
Understanding of Numerical Magnitudes	70
Integrated Theory of Numerical Development	70
Numerical Magnitude Understanding in Early Childhood	75
Play and Games in Mathematics Development	76
Improving Children's Numerical Magnitude Knowledge	
Through Games and Play	77
Preschool Programs Using Games and Play	83
Conclusions and Future Directions	84
References	85
 4. Understanding the Link Between the Approximate Number System and Math Abilities	 91
<i>Melissa E. Libertus</i>	
Introduction	91
Training Studies	92
Training Studies Using "The Number Race"	92
Nonsymbolic vs. Symbolic Training	95
Training Specific Aspects of Nonsymbolic Number Processing	96
Mechanisms Behind Long-Term ANS Training Improvements	99
Conclusions and Future Directions	102
References	103
 5. Mathematical Development in the Early Home Environment	 107
<i>Susan C. Levine, Dominic J. Gibson, and Talia Berkowitz</i>	
Introduction	107
Parent Math Language and Associated Outcomes	108
Number Talk	108
Spatial Talk	117

Summary: Math Talk	119
Gesture: An Additional Support for Children's Math Learning	120
Counting Gestures	121
Cardinal Number Gestures	122
Gesture and Arithmetic	124
Summary: Gesture	125
Parental Math Attitudes and Beliefs: Intergenerational Findings	126
Intergenerational Effects of Math Anxiety	127
Other Negative Attitudes Toward Math	128
Summary: Parental Math Attitudes and Beliefs	130
Conclusions and Future Directions	130
Acknowledgments	133
References	133
6. From Cognition to Curriculum to Scale	143
<i>Julie Sarama and Douglas H. Clements</i>	
Introduction	143
The Curriculum Research Framework (CRF)	144
The CRF and Early Mathematics	145
The CRF Enacted	145
Category I: A Priori Foundations	145
Category II: Learning Model and Learning Trajectory	147
Category III: Evaluation	162
Conclusions and Future Directions	166
References	167
7. Development of Mathematical Language in Preschool and Its Role in Learning Numeracy Skills	175
<i>David J. Purpura, Amy R. Napoli, and Yemimah King</i>	
Introduction	175
Connections Between Early Mathematics Development and General Language	175
Difficulties in Both Domains	176
Early Connections Between Mathematics and Literacy Skills	176
Language Interventions and Mathematics Skills	178
What is Content-Specific Mathematical Language?	178
Correlational and Experimental Evidence on the Relations Between Mathematical Language and Mathematics Performance	179
Interventions to Improve Mathematical Language	182
Unanswered Questions	185
Mathematical Language and Numeracy Instruction	185
Spatial Language	186
Mathematical Language Measures	187
Developing Methods for Mathematical Language Instruction	187
Conclusions and Future Directions	188
References	188

8. Early Numeracy Skills Learning and Learning Difficulties—Evidence-based Assessment and Interventions	195
<i>Pirjo Aunio</i>	
Introduction	195
Early Numeracy Skills are Important for Future Identifying Children at Risk for Mathematical Learning Difficulties	196
Early Numeracy Interventions for Low-Performing Children	197
Studies With ThinkMath Intervention Programs	201
Conclusions and Future Directions	205
References	208
9. Improving the Mathematical Knowledge of At-Risk Preschool Children: Two Approaches to Intensifying Early Math Intervention	215
<i>Alice Klein, Prentice Starkey, and Lydia DeFlorio</i>	
The SES-Related Gap in Children's Early Mathematical Knowledge	215
Potential for Early Curricular Intervention to Reduce the Math Gap	217
The <i>Pre-K Mathematics</i> Intervention	218
Effectiveness of the <i>Pre-K Mathematics</i> Intervention	220
First Approach: Tutorial Interventions in Mathematics and Attention	221
Study Design and Participants	223
The Math Intervention: Pre-K Mathematics Tutorial	225
The Attention Intervention	226
Measures and Assessment Procedures	227
Findings	228
Summary of Findings From Tutorial Intervention Study	230
Second Approach: Intensification by Providing 2 Years of Tier 1 Math Intervention	230
Study Design and Participants	231
The Math Intervention: Pre-Pre-K Mathematics and Pre-K Mathematics	232
Measures and Assessment Procedures	234
Findings	235
Summary of Findings	236
Effectiveness of the First Intervention Approach	236
Effectiveness of the Second Intervention Approach	237
Comparison of the Two Intervention Approaches for Very Low-Performing Children	237

Conclusions and Future Directions	238
Conclusion 1. Most Low-Performing Children Respond to Intensified Support in Mathematics	238
Conclusion 2. A Residual Subgroup of Low-Performing Children Showed Low Response to Intensified Math Support; Research is Needed to Understand Why	239
Conclusion 3. Public Preschool Programs Should Provide High-Quality, Intensive Math Support, But New Policies and Resources Are Needed	239
Acknowledgments	240
References	240
10. The Use of Analogies in Mathematics Instruction: Affordances and Challenges	247
<i>Xenia Vamvakoussi</i>	
Analogy and Analogical Reasoning in Mathematics	247
Where Does the Analogy “Numbers are Points on the Line” Come From?	251
Tapping Into Students’ Understanding of the Dense Ordering of Rational Numbers	252
Could the Number Line Support Students’ Understanding of Density?	254
Does the Number Line Have an Effect on Students’ Reasoning About Density?	255
Is Density More Accessible to Students in a Geometrical Rather Than in an Arithmetical Context?	257
Using the “Numbers are Points” Analogy and the “Rubber Line” Bridging Analogy	261
Conclusions and Future Directions	264
References	265
11. The Role of Visual Representations in Mathematical Word Problems	269
<i>Asha K. Jitendra and John Woodward</i>	
Students’ Natural Use of Visual Representations in Mathematics	270
Embedding Visual Representations in Text	276
Teaching Students to Create or Complete Diagrams as They Solve Problems	278
Integrating Visual Representations With Text	281
Schema-Based Instruction (SBI): Integrated Instruction in Word Problems and Visual Representations	284
Conclusions and Future Directions	289
References	290

12. The Role of Cognitive Processes in Treating Mathematics Learning Difficulties	295
<i>Lynn S. Fuchs, Douglas Fuchs, Amelia S. Malone, Pamela M. Seethaler, and Caitlin Craddock</i>	
Embedding Cognitive Training Within Explicit Skills Intervention to Facilitate Transfer to Academic Performance	297
Study Context	297
Conceptual Model for Linking Language Comprehension and Our Approach to Explicit Skills Word-Problem Intervention	299
Study Overview	302
Preliminary Results	303
Some Tentative Conclusions	306
Allocating Varying Forms of Explicit Skills Intervention to Subgroups of Learners With Different Cognitive Profiles	306
Study Context	307
Does Supported Self-Explaining Compensate for Limitations in Cognitive Processes?	309
Study Overview	312
Results	314
Implications for Practice	316
Summary and Future Directions	316
References	317
13. Explanations and Implications of Diminishing Intervention Impacts Across Time	321
<i>Drew Bailey</i>	
Introduction	321
Patterns of Effects Across Time and Theories of Children's Mathematical Development	322
Possible Explanations of Fadeout	323
Implications for the Study of Children's Mathematical Development	337
How can Researchers of Mathematical Cognition Help Produce Long-Lasting Effects?	339
Conclusions and Future Directions	343
Acknowledgments	343
References	344
Index	347
