Detailed Contents

List of Figures xv

1. Dynamic Consumption Theory 1

1.1 Permanent Income and Optimal Consumption 1
1.1.1 Optimal consumption dynamics 5
1.1.2 Consumption level and dynamics 7
1.1.3 Dynamics of income, consumption, and saving 9
1.1.4 Consumption, saving, and current income 11

1.2 Empirical Issues 13
1.2.1 Excess sensitivity of consumption to current income 13
1.2.2 Relative variability of income and consumption 15
1.2.3 Joint dynamics of income and saving 18

1.3 The Role of Precautionary Saving 21
1.3.1 Microeconomic foundations 22
1.3.2 Implications for the consumption function 25

1.4 Consumption and Financial Returns 29
1.4.1 Empirical implications of the CCAPM 31
1.4.2 Extension: the habit formation hypothesis 34

Appendix A1: Dynamic Programming 36

Review Exercises 41

Further Reading 43

References 44

2. Dynamic Models of Investment 47

2.1 Convex Adjustment Costs 48

2.2 Continuous-Time Optimization 51
2.2.1 Characterizing optimal investment 54
2.3 Steady-State and Adjustment Paths 60
2.4 The Value of Capital and Future Cash Flows 65
2.5 Average Value of Capital 68
2.6 A Dynamic IS–LM Model 71
2.7 Linear Adjustment Costs 76
2.8 Irreversible Investment Under Uncertainty 82
2.8.1 Stochastic calculus 82
2.8.2 Optimization under uncertainty and irreversibility 85
Appendix A2: Hamiltonian Optimization Methods 91
Review Exercises 97
Further Reading 99
References 100

3. Adjustment Costs in the Labor Market 102

3.1 Hiring and Firing Costs 104
3.1.1 Optimal hiring and firing 107
3.2 The Dynamics of Employment 110
3.3 Average Long-Run Effects 114
3.3.1 Average employment 115
3.3.2 Average profits 117
3.4 Adjustment Costs and Labor Allocation 119
3.4.1 Dynamic wage differentials 122
Appendix A3: (Two-State) Markov Processes 125
Exercises 127
Further Reading 128
References 129

4. Growth in Dynamic General Equilibrium 131

4.1 Production, Savings, and Growth 133
4.1.1 Balanced growth 135

4.1.2 Unlimited accumulation 137
4.2 Dynamic Optimization 139
4.2.1 Economic interpretation and optimal growth 140
4.2.2 Steady state and convergence 141
4.2.3 Unlimited optimal accumulation 142
4.3 Decentralized Production and Investment Decisions 145
4.3.1 Optimal growth 148
4.4 Measurement of "Progress": the Solow Residual 149
4.5 Endogenous Growth and Market Imperfections 152
4.5.1 Production and non-rival factors 153
4.5.2 Involuntary technological progress 154
4.5.3 Scientific research 157
4.5.4 Human capital 158
4.5.5 Government expenditure and growth 159
4.5.6 Monopoly power and private innovations 161
Review Exercises 164

5. Coordination and Externalities in Macroeconomics 170

5.1 Trading Externalities and Multiple Equilibria 171
5.1.1 Structure of the model 171
5.1.2 Solution and characterization 173
5.2 A Search Model of Money 180
5.2.1 The structure of the economy 181
5.2.2 Optimal strategies and equilibria 182
5.2.3 Implications 185
5.3 Search Externalities in the Labor Market 188
5.3.1 Frictional unemployment 189
5.3.2 The dynamics of unemployment 191
5.3.3 Job availability 192
5.3.4 Wage determination and the steady state 195
5.4 Dynamics 199
5.4.1 Market tightness 200
5.4.2 The steady state and dynamics 203

5.5 Externalities and efficiency 206
Appendix A5: Strategic Interactions and Multipliers 211
Review Exercises 216
