<i>Preface to second edition</i>	page ix
<i>Preface to first edition</i>	xiii
1 The domain of methodology	1
<i>Elements of research methodology</i>	8
Assessing the usefulness of definitions	13
2 Science and anthropology	17
<i>Science and history</i>	19
Science and controlled experiments	21
Science: a definition	21
Anthropology and problems of methodology	23
Conclusions	36
3 Operationalism in anthropological research	38
Operationalism and intersubjectivity	38
Operationalism and operationism	40
Operationalism in anthropology	43
Theory versus reality: the operational compromise	51
Summary and conclusions	53
4 Units of observation: emic and etic approaches	54
The emic approach	55
The eticists	60
Emic, etic, and the goals of anthropology	62
Intracultural variation in emic categories	64
Conclusions	65
5 Tools of research – I	67
Participant observation	67
Key-informant interviewing	71
Collection of life histories	75
Structured interviews and surveys	77
Questionnaires	81

	Ratings and rankings	82
	The semantic differential technique	87
	Projective techniques	89
	Other psychological research instruments	98
	Interactional research tools	102
6	Tools of research – II: nonverbal techniques	103
	The stream of behavior and measurement of social interaction	104
	Proxemics, kinesics, and videotape research	110
	Content analysis of folktales, myths, and other literature	113
	Physical traces: erosion and accretion	115
	Archives and other written records	116
	Technical equipment in field work	117
	Multi-instrument research	121
7	Counting and sampling	123
	Counting in ethnographic reports	124
	Problems of representativeness: sampling	127
	Patterning and sampling	138
	Summary and conclusions	139
8	Measurement, scales, and statistics	141
	Variables, measurements, and scales	142
	Murdock, social structure, and the chi-square test	147
	Tests of independence and measures of association	152
	Parametric and nonparametric statistics	160
	Statistical tests do not prove causation	162
	More complicated statistical operations	164
	The Meehl paradox: some problems in hypothesis testing	172
	Specialized competence in statistics	175
9	Art and science in field work	177
	Strategies in the art of field work	177
	Hazards and punishments of field work	184
	Sources of tension in field work	185
	Elements of community study	192
	Census taking and mapping	193
	Description and hypothesis testing	214
	Multicommunity research projects	217
	Assistants	219
	Communication among fieldworkers	221
	Interdisciplinary research	224
	Summary	227

10	Research methods, relevance, and applied anthropology	230
	The issue of relevance	230
	Some methodological issues in applied research	243
	Relevance and methodological rigor	247
11	Building anthropological theory: methods and models	251
	The theoretical frame of reference: general paradigms	251
	Deductive, inductive, and abductive research strategies	252
	The role of models	254
	Models of research design	257
	Statistical correlations and causal models	279
	Causal inferences and correlation patterns	280
	Multiple hypotheses: the strategic elimination of alternative explanations	282
	Methodology and the culture of anthropology	286
	<i>Appendixes</i>	280
A	Notes on research design	291
	Formulation of a research problem	291
	Elements of a model research plan	294
B	The Guttman Scale: a special type of ordinal measure	298
C	On using computers	304
	Types of computer operations	305
	The culture and social organization of computer use	308
	<i>Bibliography</i>	310
	<i>Index</i>	325
