## **Contents**

| About the Author Acknowledgments |   | x<br>xii |
|----------------------------------|---|----------|
|                                  |   |          |
| 2                                | A Brief History of the Discovery of Genes   | 5        |
| 3                                | Genes are Made of DNA   | 11       |
| 4                                | The Structure of DNA  | 23       |
| 5                                | Chromosomes and DNA Replication   | 31       |
| 6                                | The Genetic Code and Protein Synthesis  | 35       |
| 7                                | Splicing Genes  | 47       |
| 8                                | Damaged and Incorrect DNA can (Sometimes) be Repaired   | 51       |
| 9                                | Mutations can Cause Diseases  | 59       |
| 10                               | DNA Sequencing, Gene Cloning, Recombinant DNA Technology, DNA Fingerprinting and Gene Therapy | 63       |
| 11                               | Mitochondrial DNA   | 73       |
| 12                               | Ancient DNA   | 75       |
| 13                               | When and How did DNA Appear on Earth?   | 79       |
| 14                               | The Human Genome Project  | 81       |
| 15                               | Conclusion  | 83       |
| Glo                              | Glossary  |          |
| Index                            |   | 101      |
