Contents

1 **Continuous Dynamical Systems** 1
- 1.1 Dynamics: A Brief History 2
- 1.2 Dynamical Systems 7
- 1.3 Flows 12
- 1.4 Evolution 13
- 1.5 Fixed Points of a System 14
- 1.6 Linear Stability Analysis 14
- 1.7 Analysis of One-Dimensional Flows 21
- 1.8 Conservative and Dissipative Dynamical Systems 26
- 1.9 Some Definitions 30
- 1.10 Exercises 32

References 34

2 **Linear Systems** 37
- 2.1 Linear Systems 37
- 2.2 Eigenvalue–Eigenvector Method 39
- 2.3 Fundamental Matrix 51
  - 2.3.1 General Solution of Linear Systems 53
  - 2.3.2 Fundamental Matrix Method 55
  - 2.3.3 Matrix Exponential Function 56
- 2.4 Solution Procedure of Linear Systems 62
- 2.5 Nonhomogeneous Linear Systems 72
- 2.6 Exercises 75

References 82

3 **Phase Plane Analysis** 83
- 3.1 Plane Autonomous Systems 83
- 3.2 Phase Plane Analysis 84
- 3.3 Local Stability of Two-Dimensional Linear Systems 97
- 3.4 Linearization and Its Limitations 99
  - 3.4.1 Limitations of Linearization 100

3.5 Nonlinear Simple Pendulum . . . 102
3.6 Linear Oscillators . . . 107
3.7 Exercises . . . 123
References . . . 127

4 Stability Theory . . . 129
4.1 Stability of Linear Systems . . . 129
4.2 Methods for Stability Analysis . . . 131
4.3 Stability of Linearized Systems . . . 140
4.4 Topological Equivalence and Conjugacy . . . 143
4.5 Linear Subspaces . . . 144
4.6 Hyperbolicity and Its Persistence . . . 148
4.6.1 Persistence of Hyperbolic Fixed Points . . . 152
4.7 Basin of Attraction and Basin Boundary . . . 154
4.8 Exercises . . . 156
References . . . 158

5 Oscillations . . . 159
5.1 Oscillatory Solutions . . . 159
5.2 Theorems on Linear Oscillatory Systems . . . 161
5.3 Nonlinear Oscillatory Systems . . . 166
5.4 Periodic Solutions . . . 169
5.4.1 Gradient Systems . . . 169
5.4.2 Poincaré Theorem . . . 172
5.4.3 Bendixson's Negative Criterion . . . 173
5.4.4 Dulac's Criterion . . . 175
5.5 Limit Cycles . . . 177
5.5.1 Poincaré–Bendixson Theorem . . . 177
5.5.2 Liénard System . . . 180
5.5.3 van der Pol Oscillator . . . 182
5.6 Applications . . . 193
5.6.1 Glycolysis . . . 193
5.6.2 Predator-Prey Model . . . 194
5.7 Exercises . . . 197
References . . . 201

6 Theory of Bifurcations . . . 203
6.1 Bifurcations . . . 203
6.2 Bifurcations in One-Dimensional Systems . . . 204
6.2.1 Saddle-Node Bifurcation . . . 204
6.2.2 Pitchfork Bifurcation . . . 206
6.2.3 Transcritical Bifurcation . . . 208
6.3 Bifurcations in One-Dimensional Systems: A General Theory . . . 209
6.3.1 Saddle-Node Bifurcation . . . 209

6.4 Imperfect Bifurcation . . . 215
6.5 Bifurcations in Two-Dimensional Systems . . . 216
6.5.1 Saddle-Node Bifurcation . . . 217
6.5.2 Transcritical Bifurcation . . . 220
6.5.3 Pitchfork Bifurcation . . . 221
6.5.4 Hopf Bifurcation . . . 222
6.5.5 Homoclinic and Heteroclinic Bifurcations . . . 227
6.6 Lorenz System and Its Properties . . . 229
6.6.1 Properties of Lorenz System . . . 235
6.7 Applications . . . 241
6.7.1 Interacting Species Model . . . 241
6.7.2 Convection of Couple-Stress Fluid Layer . . . 245
6.8 Exercises . . . 252
References . . . 254

7 **Hamiltonian Systems** . . . 255
7.1 Generalized Coordinates . . . 256
7.1.1 Configuration and Phase Spaces . . . 257
7.2 Classification of Systems . . . 258
7.2.1 Degrees of Freedom . . . 259
7.3 Basic Problem with the Constraints . . . 260
7.3.1 Lagrange Equation of Motion of First Kind . . . 261
7.3.2 Lagrange Equation of Motion of Second Kind . . . 263
7.4 Hamilton Principle . . . 277
7.5 Noether Theorem . . . 278
7.6 Legendre Dual Transformations . . . 280
7.7 Hamilton Equations of Motion . . . 281
7.7.1 Differences Between Lagrangian and Hamiltonian of a Dynamical System . . . 287
7.8 Hamiltonian Flows . . . 288
7.8.1 Integrable and Non-Integrable Systems . . . 290
7.8.2 Critical Points of Hamiltonian Systems . . . 298
7.8.3 Hamiltonian and Gradient Systems . . . 302
7.9 Symplectic Transformations . . . 304
7.9.1 Symplectic Forms . . . 305
7.9.2 Symplectic Transformation . . . 305
7.9.3 Derivation of Hamilton's Equations from Symplectic Form . . . 305
7.10 Poisson Brackets . . . 307
7.11 Hamilton–Jacobi Equation . . . 309
7.12 Exercises . . . 313
References . . . 315

8 **Symmetry Analysis** . . . 317
8.1 Symmetry . . . 318
8.2 Symmetry Analysis of Dynamical Systems . . . 322
8.3 Group of Transformations . . . 323
8.3.1 Symmetry Group of Transformations . . . 327
8.3.2 Infinitesimal Transformations . . . 328
8.3.3 Infinitesimal Generator . . . 329
8.3.4 Extended Infinitesimal Operator . . . 330
8.3.5 Invariance Principle . . . 331
8.4 Canonical Parameters . . . 334
8.4.1 Some Theorems, Lemmas, and Definitions . . . 334
8.5 Lie Group Theoretic Method for First-Order ODEs . . . 342
8.6 Multiparameters Groups . . . 350
8.6.1 Lie Algebra . . . 350
8.6.2 Subalgebra and Ideal . . . 354
8.6.3 Solvable Lie Algebra . . . 355
8.7 Group Method for Second-Order ODEs . . . 357
8.8 Method of Differential Invariant . . . 358
8.8.1 Invariant Solution . . . 368
8.9 Group Method for PDEs . . . 371
8.10 Symmetry Analysis for Boundary Value Problems . . . 386
8.11 Noether Theorems and Symmetry Groups . . . 390
8.12 Symmetry Analysis of Kortweg-de Vries (KdV) Equation . . . 395
8.13 Exercises . . . 405
References . . . 407

9 **Discrete Dynamical Systems** . . . 409
9.1 Maps and Flows . . . 409
9.2 Composition of Maps . . . 410
9.3 Orbits . . . 411
9.4 Phase Portrait . . . 411
9.5 Fixed Points . . . 412
9.6 Stable and Unstable Fixed Points . . . 413
9.7 Basin of Attraction and Basin Boundary . . . 414
9.8 Linear Stability Analysis . . . 415
9.9 Cobweb Diagram . . . 417
9.10 Periodic Points . . . 420
9.11 Periodic Cycles . . . 421
9.12 Stability of Periodic Point and Periodic Cycle . . . 423
9.13 Eventually Fixed Point, Periodic Point, Periodic Orbit . . . 427
9.14 Superstable Fixed Point and Superstable Periodic Point . . . 428
9.15 Hyperbolic Points . . . 429

9.16 Non-Hyperbolic Points . . . 430
9.17 The Schwarzian Derivative . . . 431
9.18 Exercises . . . 435
References . . . 438

10 Some Maps . . . 441
10.1 Tent Map . . . 441
10.1.1 Periodic Orbits of the Tent Map . . . 444
10.2 Logistic Map . . . 446
10.2.1 Some Properties of the Logistic Map . . . 447
10.2.2 Iterative Solutions of the Logistic Equation . . . 452
10.3 Dynamics of Quadratic and Cubic Maps . . . 454
10.3.1 The Quadratic Map . . . 455
10.3.2 The Cubic Map . . . 457
10.4 Symbolic Maps . . . 459
10.5 Shift Map . . . 461
10.6 Euler Shift Map . . . 462
10.7 Decimal Shift Map . . . 464
10.8 Gaussian Map . . . 465
10.9 Hénon Map . . . 466
10.9.1 Skinny Baker Map . . . 468
10.10 Bifurcations in Discrete Systems . . . 469
10.11 Exercises . . . 476
References . . . 478

11 Conjugacy of Maps . . . 481
11.1 Conjugacy . . . 481
11.1.1 Topological Semi-conjugacy . . . 481
11.1.2 Homeomorphism . . . 482
11.1.3 Topological Conjugacy . . . 482
11.2 Properties of Conjugacy/Semi-conjugacy Relations . . . 483
11.3 Conjugacy Between Tent and Logistic Maps . . . 489
11.4 Exercises . . . 494
References . . . 495

12 Chaos . . . 497
12.1 Mathematical Theory of Chaos . . . 498
12.2 Dynamics of the Logistic Map . . . 508
12.3 Symbolic Dynamics . . . 516
12.3.1 The Sawtooth Map . . . 518
12.4 Quantifying Chaos . . . 521
12.4.1 Universal Sequence . . . 521
12.4.2 Feigenbaum Number . . . 521
12.4.3 Renormalization Group Theory and Superstable Cycle . . . 524
12.4.4 Lyapunov Exponent . . . 531

12.4.5 Invariant Measure 537
12.4.6 Sharkovskii Order 543
12.4.7 Period 3 Implies Chaos 545
12.5 Chaotic Maps 548
12.5.1 Poincaré Map 548
12.5.2 Circle Map 551
12.5.3 Smale Horseshoe Map 557
12.6 Routes of Chaos 560
12.7 Universality in Chaos 569
12.8 Exercises 570
References 573

13 Fractals 575
13.1 Fractals 576
13.2 Self-similarity and Scaling 578
13.3 Self-similar Fractals 583
13.4 Constructions of Self-similar Fractals 585
13.5 Dimensions of Fractals 598
13.6 Strange Attractor 608
13.7 Strange Repeller 613
13.8 Exercises 616
