

Contents

1	Introduction — 1
1.1	About this book — 1
1.2	What happened so far? — 2
1.3	Summary — 4
1.4	Acknowledgments — 6
2	Machine models of transfinite computability — 9
2.1	Introduction — 9
2.1.1	Simulation of machine models — 11
2.1.2	Halting problems — 13
2.2	Infinitary analogues of register machines — 13
2.2.1	wITRM-computations — 18
2.3	Infinite time α -register machines — 20
2.3.1	ITRMs with one register — 25
2.3.2	Coding transitive ϵ -structures — 30
2.3.3	Testing well-foundedness — 31
2.3.4	Evaluating truth predicates and other properties of structures — 38
2.3.5	Ordinal register machines — 42
2.4	Infinitary analogues of Turing machines — 44
2.5	Infinite time Turing machines — 45
2.5.1	Stack representation for tape models — 48
2.5.2	Computability notions for tape models — 49
2.5.3	Clockable ordinals — 56
2.5.4	α -ITTM and α -ITRMs — 61
2.5.5	Weak ITTMs — 62
2.5.6	Ordinal Turing machines — 66
2.5.7	Absoluteness of computations — 67
2.6	Beyond computability: the jump operator — 68
2.7	Further models — 69
2.7.1	Deterministic ordinal automata — 69
2.7.2	Infinite time Blum–Shub–Smale machines — 71
2.7.3	Further models — 73
2.8	Exercises — 74
3	Computability strength — 77
3.1	Preliminaries — 77
3.1.1	Hierarchies of sets and formulas — 77
3.1.2	Basics on the constructible hierarchy — 79
3.1.3	Admissibility — 83

3.1.4	Admissibility of constructible levels — 88
3.1.5	Computations and the constructible hierarchy — 92
3.2	The computability strength of ordinal register machines and α -register machines — 92
3.2.1	Lower bounds for ORMs — 94
3.2.2	ORMs without parameters — 101
3.3	The computational strength of α -register machines — 102
3.4	α -wITRMs and α -ITRMs — 105
3.4.1	Lower bounds — 114
3.5	α -TMs and OTMs — 118
3.6	α -ITTM and the Σ_2 -machine — 120
3.6.1	Upper bounds — 125
3.6.2	The Σ_2 -machine — 128
3.6.3	α -ITTM-computability and the theory machine — 130
3.6.4	Further consequences — 142
3.6.5	Further results on α -ITTM — 145
3.6.6	Without parameters — 146
3.7	Accidental and eventual writability — 148
3.7.1	Accidental and eventual writability for ITRMs — 148
3.7.2	Accidental and eventual writability for OTMs — 149
3.8	Summary — 152
3.9	Exercises — 153
4	Recognizability — 157
4.1	Preliminaries — 157
4.1.1	Extended truth predicates — 158
4.2	Lost melodies — 159
4.2.1	α -Machines — 165
4.2.2	Weak ITRMs — 165
4.3	Recognizability for infinite time register machines — 172
4.3.1	Gaps — 173
4.3.2	Aristophanean pairs — 176
4.3.3	Recognizability of the halting numbers — 178
4.3.4	A machine-free characterization of ITRM-recognizability — 180
4.4	Recognizability for ordinal Turing machines — 181
4.4.1	The recognizable closure for OTMs — 185
4.5	Variants of recognizability — 190
4.6	Summary — 192
4.7	Exercises — 193
5	Randomness — 195
5.1	Introduction — 195

- 5.2 Preliminaries on forcing and sets of real numbers — 195
- 5.3 Infinitary analogues of Sack's theorem — 203
- 5.3.1 Sacks' theorem for wITRMs and ITRMs — 204
- 5.3.2 Sacks' theorem for ITTMs — 205
- 5.3.3 Analogues for OTMs — 207
- 5.4 Randomness and recognizability — 210
- 5.5 Some results on ITRM-genericity — 212
- 5.6 OTMs and genericity — 216
- 5.7 Further results — 216
- 5.7.1 ITTMs and randomness — 217

- 6 Degree theory — 219**
- 6.1 Preliminaries — 219
- 6.2 Degree theory for ITTMs — 219
- 6.2.1 Eventually writable degrees — 224
- 6.3 Degree theory for OTMs and ORMs — 225
- 6.4 Degree theory for ITRMs — 230
- 6.4.1 Degrees of recognizables — 233
- 6.5 Some results on the degree theory of other models — 236
- 6.6 Degrees of recognizability — 236

- 7 Complexity — 239**
- 7.1 Introduction — 239
- 7.2 Complexity theory for ITTMs — 241
- 7.2.1 ITTM-complexity with dependency on the input — 244
- 7.2.2 Space complexity for ITTMs — 245
- 7.3 Complexity theory for OTMs — 247
- 7.3.1 NP-completeness for OTMs — 248
- 7.3.2 Structural properties of NP^∞ — 252
- 7.3.3 Strong space bounds and regularity — 256

- 8 Applications and interactions — 257**
- 8.1 Introduction — 257
- 8.2 Ordinal Turing machines and the constructible hierarchy — 257
- 8.3 Infinitary computations and descriptive set theory — 258
- 8.4 Infinite time computability and Borel reducibility — 261
- 8.4.1 ITTM-reducibility and Borel reducibility — 262
- 8.5 Infinite time computable model theory — 264
- 8.6 Generalized effective reducibility — 265
- 8.6.1 An application: versions of the axiom of choice — 272
- 8.7 Further prospects — 275

9 Philosophical aspects — 277

- 9.1 Infinitary constructions in mathematics — 277
- 9.2 Idealized agents in the philosophy of mathematics — 281
- 9.2.1 Idealized agents in G. Takeuti's foundational position — 282
- 9.2.2 Idealized agents and Philipp Kitcher's mathematical empiricism — 283
- 9.2.3 Idealized agents in Ramsey's foundations of mathematics — 283
- 9.2.4 Remarks — 284
- 9.3 Infinitary machines as formal models for idealized agents — 285
- 9.3.1 The idealized agent of set theory — 286
- 9.3.2 Transfinite working time — 287
- 9.3.3 Elementary steps — 289
- 9.3.4 Idealized agent machines and ordinal Turing machines — 290
- 9.3.5 Criteria for a defensible Church–Turing thesis for the transfinite — 291
- 9.4 Infinitary Agency as modeled by OTMs — 295
- 9.4.1 Transfinite creative subjects? — 299
- 9.5 Infinite time Turing machines and the revision theory of truth — 302
- 9.5.1 The revision theory of truth — 303
- 9.5.2 Connecting revision theory of truth and ITTMs — 308
- 9.5.3 Applying the connection — 309

Bibliography — 313

Index — 323
