Preface xiii

Acknowledgments xiv

## PART I OVERVIEW 1

### Chapter 1 The Frontier of Intractability 3

- 1.1 PPAD: Finding a Needle You *Know* Is in the Haystack 5
- 1.2 Quasi-Polynomial Time and the Birthday Paradox 12
- 1.3 Approximate Nash Equilibrium 17

### Chapter 2 Preliminaries 19

- Notation 19
- 2.1 Nash Equilibrium and Relaxations 19
- 2.2 PPAD and END-OF-A-LINE 20
- 2.3 Exponential Time Hypotheses 22
- 2.4 PCP Theorems 22
- 2.5 Learning Theory 24
- 2.6 Information Theory 25
- 2.7 Useful Lemmata 27

## PART II COMMUNICATION COMPLEXITY 31

### Chapter 3 Communication Complexity of Approximate Nash Equilibrium 33

- Our Results 34
- 3.1 Uncoupled Dynamics 35
- 3.2 Techniques 36
- 3.3 Additional Related Literature 38
- 3.4 Proof Overview 39

3.5 Proofs 44  
3.6 An Open Problem: Correlated Equilibria in 2-Player Games 60

**Chapter 4 Brouwer's Fixed Point 61**

4.1 BROUWER with  $\ell_\infty$  61  
4.2 Euclidean BROUWER 68

**PART III PPAD 77**

**Chapter 5 PPAD-Hardness of Approximation 79**

**Chapter 6 The Generalized Circuit Problem 83**

Our Results 84  
6.1 Proof Overview 85  
6.2 From Brouwer to  $\epsilon$ -GCIRCUIT 87  
6.3 GCIRCUIT with Fan-out 2 99

**Chapter 7 Many-Player Games 101**

Related Works: Tractable Special Cases 101  
7.1 Graphical, Polymatrix Games 101  
7.2 Succinct Games 107

**Chapter 8 Bayesian Nash Equilibrium 111**

**Chapter 9 Market Equilibrium 115**

9.1 Why Are Non-Monotone Markets Hard? 116  
9.2 High-Level Structure of the Proof 116  
9.3 Adaptations for Constant Factor Inapproximability 117  
9.4 Non-Monotone Markets: Proof of Inapproximability 119

**Chapter 10 CourseMatch 131**

10.1 The Course Allocation Problem 131  
10.2 A-CEEI Is PPAD-Hard 133  
10.3 A-CEEI  $\in$  PPAD 139

**PART IV QUASI-POLYNOMIAL TIME 147**

**Chapter 11 Birthday Repetition 149**

11.1 Warm-Up: Best  $\epsilon$ -Nash 150

<b>Chapter 12</b>	<b>Densest <math>k</math>-Subgraph</b>	155
	12.1 Construction (and Completeness)	159
	12.2 Soundness	160
<b>Chapter 13</b>	<b>Community Detection</b>	177
	13.1 Related Works	178
	13.2 Overview of Proofs	179
	13.3 Hardness of Counting Communities	182
	13.4 Hardness of Detecting Communities	183
<b>Chapter 14</b>	<b>VC and Littlestone's Dimensions</b>	187
	14.1 Discussion	188
	14.2 Techniques	189
	14.3 Related Work	190
	14.4 Inapproximability of the VC Dimension	191
	14.5 Inapproximability of Littlestone's Dimension	200
	14.6 Quasi-polynomial Algorithm for Littlestone's Dimension	211
<b>Chapter 15</b>	<b>Signaling</b>	213
	15.1 Techniques	214
	15.2 Near-Optimal Signaling Is Hard	215
<b>PART V APPROXIMATE NASH EQUILIBRIUM</b>		<b>221</b>
<b>Chapter 16</b>	<b>2-Player Approximate Nash Equilibrium</b>	<b>223</b>
	Additional Related Work	224
	16.1 Technical Overview	225
	16.2 END-OF-A-LINE with Local Computation	232
	16.3 Holographic Proof	236
	16.4 Polymatrix WeakNash	248
	16.5 From Polymatrix to Bimatrix	269
	References	273
	Index	291
	Author Biography	303
