

Table of Contents

	Preface	
	Introduction	1
Chapter 1	The General Theoretical Framework	5
	1. The Three Levels of Competition	5
	2. Barriers to Entry and Externalities	8
	3. Entry Detering Strategies	13
	4. Measuring Entry Barriers	15
	5. Multidimensionality of Entry	17
	6. Policy Implications of the Concept	18
Chapter 2	Absolute Cost Advantages and Barriers to Entry	21
	1. Superior Efficiency	21
	2. Patent Rights as Cost Advantages	22
	3. Cost Advantages due to Ownership of Scarce Resources	26
	4. Conclusion	30
Chapter 3	Economies of Scale without Intertemporal Links	31
Chapter 4	Economies of Scale with Intertemporal Links	49
Chapter 5	Product Differentiation: Goodwill I: The Basic Model	71
	1. The Extrapolation Principle	72
	a) An Utopia with efficient resource allocation	74
	b) Monitoring of employees and job market signalling	76
	c) The Vertical Integration Problem	80
	d) Goodwill as a source of information about product quality	83
	e) A note on some recent developments in game theory	86
	2. A Model of Goodwill	86
	a) The Consumer	87
	b) Market Equilibrium	92
	c) Long Run Equilibrium and Entry Conditions	94
	d) Barriers to Entry and Goodwill in the Model	99
	3. The Meaning of Rational Expectations and the Extrapolation Principle	100
Chapter 6	Product Differentiation: Goodwill II: Informational Activities	105
	1. Efforts to Provide Quality Information (Signalling)	105
	2. Bias Against Newcomers	117
	3. Product Testing	120
	4. Economies of Scale due to Goodwill	123
	5. Conclusion	124

Chapter 7	Capital Requirements and Barriers to Entry	125
	1. Risk without Moral Hazard	125
	2. Asymmetric Information as a Distortion of Entry in the Presence of Risk	129
	a) How to Define Efficiency when Subjective Probabilities are Variable	130
	b) A Model of Risk Spreading with Moral Hazard (Asymmetric Information)	131
	c) Project Size and Distortion	135
	3. Implications for Capital Requirements as Entry Barriers	137
	a) The Distortions Discussed are of the Externality Type	137
	b) Bias of Financial Intermediaries	139
	c) Capital Requirements and Risk: The Leasing Example	141
	d) Correlated Risk	142
	e) Risk and Strategic Entry Deterrence	143
Chapter 8	Barriers to Entry in Progressive Industries I: Strictly Sequential Innovations	145
	1. The Three Level Framework as a Basis to Study the Relation of Entry Barriers and Technical Progress	145
	2. A Simple Model with Strictly Sequential Innovation Structure. The Case of a Strictly Stationary Environment	148
	3. The Influence of Market Size and Market Growth	151
	4. The Influence of the Degree of Progressiveness and of the Price Elasticity of Demand	165
	Appendix	170
Chapter 9	Barriers to Entry in Progressive Industries II: Competing Innovations	183
	1. The Equilibrium and the Optimum Number of Competing Innovations for a Given Timing of Innovations	183
	2. The Timing of Competing Innovations	186
	3. The Equilibrium: Comparative Static Analysis	195
	4. The Optimum	199
	5. Evaluation	201
	6. Some Policy Implications	208
	a) The Patent Issue	208
	b) Predatory Pricing	208
	c) Price Competition between Consecutive Innovations	210
Chapter 10	Conclusion	213
	References	215
