Preface	xxi
About the editors	xxiii
Section 1 Titanium alloy properties, fabrication approaches and alloy design for biomedical use	1
1.1 Titanium for medical and dental applications— An introduction	3
<i>F.H. (Sam) Froes</i>	
1.1.1 Background	3
1.1.2 Body implants	5
1.1.3 Dental implants	10
1.1.4 Titanium surgical instruments	11
1.1.5 Titanium in wheel chairs, etc.	13
1.1.6 Specifications for titanium in medical and dental applications	13
1.1.7 Other titanium-based materials	13
1.1.8 Post script	19
1.1.9 This book	19
References	20
1.2 Titanium background, alloying behavior and advanced fabrication techniques—An overview	23
<i>F.H. (Sam) Froes, M. Qian</i>	
1.2.1 Titanium alloys and their importance	23
1.2.2 Metallurgy of the titanium system	26
1.2.3 Advanced fabrication techniques for titanium components	27
1.2.4 Conclusions	35
Acknowledgments	35
References	35
1.3 The molecular orbital approach and its application to biomedical titanium alloy design	39
<i>M. Morinaga</i>	
1.3.1 Introduction	39
1.3.2 Theory of alloy design	39

1.3.3	Molecular orbital calculation and alloying parameters of titanium alloys	45
1.3.4	Correlation of alloying parameters with alloy properties	48
1.3.5	Alloy design of titanium alloys	55
1.3.6	Conclusion	62
	Acknowledgments	62
	References	62
1.4	Titanium and titanium alloys: Materials, review of processes for orthopedics and a focus on a proprietary approach to producing cannulated bars for screws and nails for trauma	65
	<i>F. Ory, J.L. Fraysse</i>	
1.4.1	General processes for titanium alloys: From ore to bar material	65
1.4.2	Families of titanium and titanium alloys for orthopedics	66
1.4.3	Proprietary approach to producing cannulated bars for screws and nails for trauma	75
1.4.4	Summary	91
	References	91
Section 2	Surface biofunctionalization of titanium and titanium alloys for biomedical applications	93
2.1	Transition of surface modification of titanium for medical and dental use	95
	<i>T. Hanawa</i>	
2.1.1	Clinical demands and purpose of surface modification	95
2.1.2	Surface of titanium	100
2.1.3	Surface modification techniques	104
2.1.4	Transient of surface modification	109
2.1.5	Application to regenerative medicine	110
2.1.6	Future of surface modification	110
	References	111
2.2	Modern techniques of surface geometry modification for the implants based on titanium and its alloys used for improvement of the biomedical characteristics	115
	<i>E.G. Zemtsova, A.Y. Arbenin, R.Z. Valiev, V.M. Smirnov</i>	
2.2.1	Introduction	115
2.2.2	Classical methods of the surface geometry modification of titanium implants	122
2.2.3	Prospective methods of geometry implant surface changes to create a two-level hierarchy of topography	134

2.2.4	The practical application of the coating with a two-level hierarchy of the surface relief in implantology	139
2.2.5	Conclusion	139
	Acknowledgments	140
	References	140
2.3	Nanobioceramic thin films: Surface modifications and cellular responses on titanium implants	147
	<i>A.H. Choi, S. Akyol, A. Bendavid, B. Ben-Nissan</i>	
2.3.1	Introduction	147
2.3.2	Adhesion of thin films and coatings	149
2.3.3	Anodic oxidation (anodizing) of titanium surfaces	151
2.3.4	Surface coatings on titanium	153
2.3.5	Stresses in thin films and coatings	157
2.3.6	Stress and adhesion measurement techniques	158
2.3.7	Cellular responses and biological activities	164
2.3.8	Concluding remarks	167
	References	168
2.4	Ti-Nb-Zr system and its surface biofunctionalization for biomedical applications	175
	<i>M. Dinu, S. Franchi, V. Pruna, C.M. Cotrut, V. Secchi, M. Santi, I. Titorencu, C. Battocchio, G. Iucci, A. Vladescu</i>	
2.4.1	Introduction	175
2.4.2	Classification of titanium alloys	176
2.4.3	Fabrication of titanium alloys	177
2.4.4	Titanium alloy types used in medicine	178
2.4.5	Elastic modulus of Ti-Nb-Zr system	180
2.4.6	Corrosion resistance of the Ti-Nb-Zr system	181
2.4.7	In vitro biological properties of the Ti-Nb-Zr system	182
2.4.8	Methods for improving the bioactivity of the Ti-Nb-Zr system	187
	Acknowledgments	192
	References	192

Section 3 Additive manufacturing of titanium and titanium alloys for implant applications

201

3.1 Design of titanium implants for additive manufacturing

M. Leary

3.1.1	Introduction	203
3.1.2	Additive manufacture	204
3.1.3	Manufacturability	206
3.1.4	Cellular structures and lattice design	211

3.1.5 Data management	212
3.1.6 Geometry conformance	215
3.1.7 Topology optimization	216
3.1.8 Just-in-time implant philosophy	217
Acknowledgments	218
References	218
3.2 Anatomics 3D-printed titanium implants from head to heel	225
<i>R.G. Thompson</i>	
3.2.1 Anatomics—Company overview	225
3.2.2 3D-printed titanium implants—Selected case studies	226
3.2.3 Conclusion	235
References	236
3.3 Ti-6Al-4V orthopedic implants made by selective electron beam melting	239
<i>H.P. Tang, P. Zhao, C.S. Xiang, N. Liu, L. Jia</i>	
3.3.1 Introduction	239
3.3.2 Feedstock material and the SEBM manufacturing process	240
3.3.3 Microstructural characteristics and mechanical properties of SEBM-fabricated Ti-6Al-4V	241
3.3.4 Case study 1: SEBM-fabricated ELI Ti-6Al-4V ankle implants	243
3.3.5 Case study 2: SEBM-fabricated ELI Ti-6Al-4V cervical vertebral fusion cages	243
3.3.6 Case study 3: SEBM-fabricated ELI Ti-6Al-4V sacral vertebral fusion cages	244
3.3.7 Other Ti-6Al-4V bone implants manufactured by Xi'an Sailong Metal Materials Co. Ltd.	246
3.3.8 Conclusion and outlook	248
Acknowledgments	248
References	248
3.4 3D-printed titanium alloys for orthopedic applications	251
<i>A. Kumar, R.D.K. Misra</i>	
3.4.1 Introduction	251
3.4.2 Metallic biomaterials	252
3.4.3 Titanium alloys	253
3.4.4 Toxicological effect of titanium alloys	254
3.4.5 3D printing of titanium alloy scaffolds	255
3.4.6 Biocompatibility of titanium alloys	256
3.4.7 Vascularization of 3D scaffolds with designed porous architecture	262
3.4.8 Antibacterial effect of titanium alloys	264
3.4.9 Conclusions	265
References	267

3.5 Ti-6Al-4V lattice structures fabricated by electron beam melting for biomedical applications	277
<i>S. Zhao, W.T. Hou, Q.S. Xu, S.J. Li, Y.L. Hao, R. Yang</i>	
3.5.1 Introduction	277
3.5.2 Design of Ti-6Al-4V cellular structures	278
3.5.3 Fabrication of Ti-6Al-4V cellular structures	278
3.5.4 Surface characteristics and microstructure of Ti-6Al-4V cellular structures	280
3.5.5 Mechanical properties of Ti-6Al-4V cellular structures	280
3.5.6 Biocompatibility of Ti-6Al-4V cellular structures	291
3.5.7 Conclusion and future research trends	295
Acknowledgments	297
References	297
3.6 Additive manufacturing of cp-Ti, Ti-6Al-4V and Ti2448	303
<i>T.B. Sercombe, L.-C. Zhang, S. Li, Y. Hao</i>	
3.6.1 Introduction	303
3.6.2 Additive manufacturing	306
3.6.3 Additive manufacturing of Ti2448	310
3.6.4 Biocompatibility of AM porous Ti	319
3.6.5 Summary	320
References	321
Further reading	324
3.7 Additive manufacturing of titanium and titanium alloys for biomedical applications	325
<i>J.D. Avila, S. Bose, A. Bandyopadhyay</i>	
3.7.1 Introduction	325
3.7.2 Additive manufacturing processes	327
3.7.3 Challenges and future trends	338
Acknowledgments	339
References	340
Section 4 Titanium for implant applications	345
4.1 Titanium spinal-fixation implants	347
<i>M. Niinomi</i>	
4.1.1 Introduction	347
4.1.2 Requirements for spinal-fixation rods	348
4.1.3 Advantages of Ti alloys with low rigidity for spinal-fixation implants	350
4.1.4 Improvement of the strength of low rigidity Ti alloys while keeping low rigidity	351

4.1.5	Ti alloys with changeable Young's moduli for spinal-fixation implants	359
4.1.6	Applications in cage and wire for spinal-fixation implants	361
4.1.7	Summary	366
	References	367
4.2	Biocompatible beta-Ti alloys with enhanced strength due to increased oxygen content	371
	<i>J. Stráský, M. Janeček, P. Harcuba, D. Preisler, M. Landa</i>	
4.2.1	Introduction	371
4.2.2	Effect of oxygen content on phase stability and elastic modulus in biomedical β -Ti alloys	375
4.2.3	Effect of oxygen on strength	380
4.2.4	The case study: The Ti-Nb-Zr-ta-O alloy for load-bearing implant manufacturing	384
4.2.5	The applicability of biomedical β -Ti alloys with increased oxygen content in orthopedics	386
	Acknowledgments	387
	References	388
4.3	Nanostructured commercially pure titanium for development of miniaturized biomedical implants	393
	<i>R.Z. Valiev, I. Sabirov, E.G. Zemtsova, E.V. Parfenov, L. Dluhoš, T.C. Lowe</i>	
4.3.1	Introduction	393
4.3.2	Material and methods	394
4.3.3	Design of miniaturized implants	395
4.3.4	Nano-Ti studies and implant characterization	396
4.3.5	Surface modification of nano Ti implants	403
4.3.6	Conclusions	411
	Acknowledgments	412
	References	412
4.4	Mechanical performance and cell response of pure titanium with ultrafine-grained structure produced by severe plastic deformation	419
	<i>Y. Estrin, R. Lapovok, A.E. Medvedev, C. Kasper, E. Ivanova, T.C. Lowe</i>	
4.4.1	Introduction	419
4.4.2	Manufacturing of ultrafine-grained and nanostructured commercially pure Ti by SPD	420
4.4.3	Mechanical performance of SPD-modified CP Ti with a focus on fatigue strength	424
4.4.4	Enhancement of cell adhesion and proliferation on surfaces of SPD-processed CP titanium	426

4.4.5	Effect of surface treatment by the commonly used SLA technique on the mechanical and biological properties of CP titanium	437
4.4.6	Recommendations for Ti implant manufacturers	445
4.4.7	Conclusions	448
	Acknowledgments	448
	References	449
4.5	Microstructure and lattice defects in ultrafine grained biomedical $\alpha + \beta$ and metastable β Ti alloys	455
	<i>J. Stráský, M. Janeček, I. Semenova, J. Čížek, K. Bartha, P. Harcuba, V. Polyakova, S. Gatina</i>	
4.5.1	Introduction	455
4.5.2	Strain accumulation, grain refinement, and Hall-Petch strengthening	456
4.5.3	Dislocations and vacancies/point defects in biomedical Ti alloys prepared by severe plastic deformation	462
4.5.4	Mechanical properties of UFG biomedical Ti alloys	466
4.5.5	Microstructural stability and phase transformations in UFG biomedical Ti alloys	468
4.5.6	Applicability of UFG Ti and Ti alloys as orthopedic implants	471
	Acknowledgments	472
	References	472
4.6	Aluminum- and vanadium-free titanium alloys for application in medical engineering	477
	<i>C. Siemers, M. Bäker, F. Brunke, D. Wolter, H. Sibum</i>	
4.6.1	Introduction and state of the art	477
4.6.2	Simulation and experimental procedures	479
4.6.3	Choice of alloying elements and alloy compositions	481
4.6.4	Interaction between the alloying elements and titanium	483
4.6.5	Results of the experimental investigations and discussion	484
4.6.6	Conclusions and future work	489
	Acknowledgments	490
	References	490
	Further reading	492
Section 5	Titanium implants for dental applications	493
5.1	Why titanium in dental applications?	495
	<i>H.S. Baumgarten</i>	
5.1.1	Introduction	495
5.1.2	Titanium in dental implants	495
5.1.3	Titanium in restorative dentistry	497

5.1.4	Titanium in oral and maxillofacial surgery	499
5.1.5	Titanium in orthodontics	501
5.1.6	Titanium in endodontics	502
5.1.7	Conclusion	503
	References	503
5.2	The role of titanium in implant dentistry	505
	<i>P. Gubbi, T. Wojtisek</i>	
5.2.1	Historical background of dental implants	505
5.2.2	Influence of characteristics of dental implant surface on its osseointegration	519
	Acknowledgments	526
	References	526
5.3	Titanium MIM for manufacturing of medical implants and devices	531
	<i>T. Ebel</i>	
5.3.1	The technology of metal injection molding	531
5.3.2	Challenges of titanium MIM	536
5.3.3	Current success and research of titanium MIM	539
5.3.4	Case studies of medical components made by titanium MIM	546
5.3.5	Summary and outlook	548
	References	549
Section 6 Nitinol and Ni-free superelastic titanium alloys in medical and dental applications		553
6.1	The metallurgy of Nitinol as it pertains to medical devices	555
	<i>T. Duerig</i>	
6.1.1	The metallurgy of Nitinol	555
6.1.2	Mechanical properties and their value to medical devices	563
6.1.3	Direction forward	568
	References	569
6.2	The effect of Nitinol on medical device innovation	571
	<i>D.B. Spenciner, J.J. Scutti</i>	
6.2.1	Introduction	571
6.2.2	Methods	572
6.2.3	Results	574
6.2.4	Discussion	580
	References	581
6.3	Advanced TiNi shape memory alloy stents fabricated by a powder metallurgy route	583
	<i>K. Kondoh, J. Umeda, R. Soba, Y. Tanabe</i>	
6.3.1	Introduction	583
6.3.2	Preparation of TiNi SMAs by the powder metallurgy process	585

6.3.3	Microstructures and mechanical properties of PM TiNi SMAs	586
6.3.4	Fundamental properties of PM TiNi SMA stents	588
6.3.5	Conclusion and outlook	589
	Acknowledgments	590
	References	590
6.4	Ni-free superelastic titanium alloys for medical and dental applications	591
	<i>A. Ramezannejad, W. Xu, M. Qian</i>	
6.4.1	Introduction	591
6.4.2	Metallurgical aspects of superelasticity	592
6.4.3	Stress-induced transformation	592
6.4.4	Alloy design (superelasticity) and the origin of superelasticity in NiTi	594
6.4.5	Potential health hazards of Ni-Ti alloys	596
6.4.6	Recent Ni-free superelastic alloys	596
6.4.7	Role of alloying elements (Ni-free)	599
6.4.8	Strain accommodation	602
6.4.9	Crystallographic texture	604
6.4.10	Current applications	607
6.4.11	Concluding remarks	608
	Acknowledgments	608
	References	608
