Table of Contents

List of Tables xi

Preface xiii

Chapter 1

Core Results of Demand Theory 1

1.1 The Triad 1
1.2 Utility Index 3
1.3 Elasticity of Substitution 3
1.4 Compensated Price Changes 4
1.5 Fundamental Equation of Value Theory 6
1.6 Partial Substitution Elasticities 12
1.7 Barten's Fundamental Matrix Equation 14

Chapter 2

Separable Utility Functions

2.1 Basic Separability Definitions 19
2.1.1 Block Additivity 19
2.1.2 Directly Additive Preferences 21
2.1.3 The Utility Tree 21
2.1.4 Pearce Separability 22
2.1.5 Indirect Additivity 23
2.2 Houthakker's Directly Additive Preferences 24
2.2.1 Basic Theorem on Additive Preferences 25
2.2.2 Stone-Geary Utility Function 29
2.2.3 Frisch's Money Flexibility 30
2.3 Barten's Almost Additive Preferences 30
2.3.1 Almost Additive Preferences Defined 31
2.3.2 Substitution Effects Under Almost Additive Preferences 32
2.3.3 Almost Additive, Block-Independent, Preferences 33

Chapter 3

The Linear Expenditure System

3.1 Preliminary: The Transition from Utility Function to Behavioral Relations 35
3.2 Principal Features of Stone's System
3.2.1 Expenditure System Defined 36
3.2.2 Review of Major Results 37

3.3 Estimation of Stone's System
3.3.1 Systems Least-Squares Approach (Stone) 41
3.3.2 Systems Least-Squares Approach (Carlevaro and Rossier) 43
3.3.3 Maximum-Likelihood Approach (Parks and Solari) 47
3.4 Variants of the LES
3.4.1 The LES Under Habit Formation (Pollak and Wales) 58
3.4.2 Triad Restrictions Only 62
3.4.2.1 Leser's Transformation 63
3.4.2.2 Estimation Procedure 66
3.4.2.3 Empirical Results 70
3.4.3 Leser's Approximation 76
3.4.4 Powell's Approximation 77

Chapter 4

Some Rotterdam School Models

4.1 Demand Equations in Differentials and Differences of Logarithms 81
4.1.1 Triad Restrictions Only 81
4.1.2 Additive-Preference Version 86
4.2 Partitioning Price Elasticities
4.2.1 General and Specific Substitution Effects 87
4.2.2 Specific Substitution Effect Related to Income Elasticities and to Homogeneity of Demand 89
4.2.3 Symmetry Restriction on Elasticities 90
4.2.4 Additivity Constraint on Elasticities 91
4.2.5 General Substitution Effects Related to Income Elasticities 92
4.2.6 Income Effects Related to Income Elasticities 92
4.3 Constant Elasticity Demand System 92
4.3.1 Constrained Aitken Estimator 93
4.3.2 Additive-Preference Version 97
4.3.3 Almost Additive, Block-Independent Preferences 97
4.3.3.1 Zero Restrictions on Elasticity Components 99
4.3.3.2 Dimensionality of the Parameter Space 101
4.3.3.3 Estimation Scheme 102

Chapter 5

An Extension in Parameter Space: Brown and Heien's *S*-Branch Utility Tree

5.1 The *S*-Branch Utility Tree 103
5.2 Demand Functions 105

5.3 Slutsky Derivatives 107
5.4 Price and Income Elasticities 107
5.5 Outline of Estimation Procedures 108

Chapter 6

Endogenizing Savings

6.1 Early Foundations—Tintner 109
6.1.1 Discrete Time Formulation 110
6.1.2 Continuous Time Formulation 111
6.2 Lluch's Extended Linear Expenditure System (ELES)
6.2.1 Continuous Time with Intertemporally Additive Utility Functional 112
6.2.2 Stone-Geary Instantaneous Utility Function 116
6.2.3 Elasticities in ELES 118
6.2.4 Estimation of ELES
6.2.4.1 Error Structure 121
6.2.4.2 Maximum-Likelihood Estimation: Time Series 123
6.2.4.3 Maximum-Likelihood Estimation: Cross Sections 124
6.2.5 Generation of Permanent Income Data: Some Options for Time Series 132
