

Contents

1	Multiplicative Forms on Algebras and the Group Determinant	1
1.1	Introduction	1
1.2	Sums of Squares and Norm Forms on Algebras.....	2
1.2.1	Diophantine Equations and the Composition of Quadratic Forms.....	4
1.2.2	The Relation to the Theory of Algebras.....	7
1.3	Group Matrices and the Group Determinant	11
1.3.1	Group Characters Before Frobenius.....	11
1.3.2	The Results on Characters Which Appear in [106] and [107].....	12
1.3.3	Group Determinant Factors	13
1.3.4	Group Matrices.....	13
1.3.5	Right Division in Groups and Group Matrices of Small Groups	18
1.3.6	Symmetrical Forms of the Group Matrix	21
1.3.7	The Group Determinant.....	22
1.4	The Original Motivation for the Examination of the Group Determinant	24
1.5	Frobenius' Definition of Group Characters.....	26
1.6	Group Characters and the Group Determinant	28
1.7	Frobenius' Basic Results and Their Proofs	29
1.7.1	Schur's Approach to Representation Theory.....	31
1.8	k -Characters and the Construction of Irreducible Factors	41
1.8.1	The Connection with the Cayley-Hamilton Theorem and Symmetric Functions	43
1.9	Historical Remarks.....	46
1.9.1	Early Group Determinant Work After Frobenius	46
1.10	The Initial Results on the Information in k -Characters	48
1.11	Summary of Further Developments	51

2	Further Group Matrices and Group Determinants	55
2.1	Introduction	55
2.2	Arbitrary Group Matrices.....	58
2.2.1	A Connection with Invariant Theory	64
2.3	Representation of Group Matrices in Block Form	65
2.3.1	Group Matrices Built from Arbitrary Subgroups	65
2.3.2	Group Matrices of Direct Products	66
2.3.3	Groups with a Normal Subgroup	68
2.3.4	Split Extensions	68
2.3.5	Groups Which Have an Exact Factorization as a Product of Two Subgroups	71
2.3.6	The Group Matrix Using Conjugacy Class Ordering	75
2.3.7	A Digression: The Octonion Loop	76
2.4	Methods to Factorize the Group Determinant	77
2.4.1	Explicit Diagonalization of a Group Matrix	77
2.4.2	The Partial Diagonalization with Respect to a Given Subgroup	78
2.4.3	Induction and Restriction of Representations.....	80
2.4.4	Methods from General Determinant Theory	82
2.4.5	The Schur Complement	83
2.4.6	More Examples	86
2.5	Virtual Representations via Supermatrices	90
2.5.1	Superalgebras and Supermatrices	91
2.5.2	Group Matrices Corresponding to Virtual Representations.....	95
2.5.3	The Hopf Algebra Operations	97
2.6	Group Matrices and the Burnside Ring	100
2.7	Projective Representations and Group Matrices.....	101
2.7.1	The Connection with the Group Determinant.....	103
2.8	Group Matrices and Group Determinants in the Modular Case.....	106
2.8.1	Dickson's Construction of the Group Matrix as a Block Matrix.....	106
3	Norm Forms and Group Determinant Factors	111
3.1	Introduction	111
3.2	Norm-Type Forms on Algebras	114
3.2.1	Multiplicative Properties of Norm Forms on Algebras	116
3.2.2	Multilinearization	118
3.3	Results on Multiplicative Norm Forms on Algebras	122
3.3.1	The Cubic Form and the Jordan Algebra.....	122
3.3.2	Arbitrary Multiplicative Forms on Algebras	125
3.4	The Relationship to the Work of the School of A. Bergmann	134
3.5	The Connection with the "Average" Invariants of Roitman.....	136

4	S-Rings, Gelfand Pairs and Association Schemes	137
4.1	Introduction	137
4.2	Centralizer Rings of Permutation Groups	140
4.3	S-Rings	143
4.3.1	Permutation Groups with Loop Transversals	145
4.3.2	Commutativity of the Centralizer Ring	146
4.4	Hecke Algebras	148
4.5	Association Schemes	148
4.5.1	Character Tables of Association Schemes	152
4.5.2	Duality in Association Schemes	154
4.6	Fusion of Character Tables	158
4.6.1	The Magic Rectangle Condition	159
4.6.2	Induction and Frobenius Reciprocity for Association Schemes	160
4.6.3	Some Other Appearances of Association Schemes	162
4.7	Quasigroup Characters	163
4.7.1	The Multiplication Group of a Quasigroup	164
4.7.2	Class Functions on Quasigroups	167
4.7.3	The Information in the Character Table of a Loop or Quasigroup	169
4.7.4	The Information in the Character Table of a Loop	170
4.7.5	The Information in the Character Table of a Quasigroup	171
4.7.6	Rank 2 Quasigroups	172
4.7.7	Induction and Restriction for Quasigroup Characters and Frobenius Reciprocity	173
4.7.8	A Generalization of Artin's Theorem for Group Characters	174
4.7.9	Methods of Calculation	174
5	The 2-Characters of a Group and the Weak Cayley Table	177
5.1	Introduction	177
5.2	The Information in the 1- and 2-Characters of a Group	179
5.2.1	The Information Contained in the Ordinary Character Table	179
5.2.2	The Weak Cayley Table of a Group	181
5.2.3	The 2-Character Table	185
5.2.4	Properties Determined by the Weak Cayley Table	188
5.2.5	Groups with the Same WCT	190
5.3	Weak Cayley Isomorphisms and Weak Cayley Table Groups	194
5.3.1	Finite Groups with Trivial Weak Cayley Groups	194
5.3.2	Groups with Non-Trivial $\mathcal{W}(G)$	196
5.3.3	Simple Finite Groups	198
5.3.4	Infinite Groups	198

5.4	The Category of Weak Cayley Morphisms	199
5.4.1	The Category of Weak Morphisms	201
5.4.2	The Adjunction	203
5.4.3	Homotopy	205
6	The Extended k-Characters	211
6.1	Introduction	211
6.2	k -Classes and Extended k -Characters	212
6.2.1	k -Classes	213
6.2.2	Relevant Representation Theory of \mathcal{S}_n over \mathbb{C}	213
6.2.3	The Connection with Wreath Products	217
6.3	χ_λ as a Multilinearization	220
6.4	χ_λ as a Trace and an Invariant	222
6.4.1	χ_λ as an Invariant	224
6.5	k -Class Functions	225
6.5.1	Orthogonality	226
6.5.2	The Number of k -Classes and Extended k -Functions	228
7	Fourier Analysis on Groups, Random Walks and Markov Chains	231
7.1	Introduction	231
7.2	Fourier Analysis on Groups	235
7.2.1	The Fourier Transform from Factors of the Group Determinant	239
7.3	Induced Class Functions and Conditional Expectations	240
7.3.1	Probability on Association Schemes	242
7.4	Finite Fourier Transforms	243
7.4.1	The Discrete Fourier Transform on \mathbb{Z}_n	243
7.4.2	The Fast Fourier Transform: An Explanation in Terms of the Group Matrix	246
7.4.3	Fast Fourier Transforms for Arbitrary Finite Groups	248
7.5	Markov Chains and Random Walks	249
7.5.1	Historical Remarks	249
7.5.2	The Basic Definition	250
7.5.3	Random Walks on Groups	252
7.5.4	Random Walks that Become Uniform in a Finite Number of Steps	253
7.5.5	Arbitrary Random Walks on Groups	264
7.5.6	Fission of Group Classes	265
7.5.7	Homogeneous Actions of Finite Groups	267
7.5.8	An Example	268

8	<i>K</i>-Characters and <i>n</i>-Homomorphisms	271
8.1	Introduction	271
8.2	Frobenius <i>n</i> -Homomorphisms and Geometry	273
8.2.1	Frobenius <i>n</i> -Homomorphisms and Related Objects	273
8.2.2	A Generalization of the Gelfand–Kolmogorov Theorem	275
8.3	The FKG Inequality and Its Generalization	278
8.3.1	Extensions to Higher Cumulants	279
8.3.2	The Conjecture of Sahi.....	284
8.3.3	The Connection with <i>k</i> -Characters	285
9	Fusion and Supercharacters	287
9.1	Introduction	287
9.2	Fusion from Abelian Groups	289
9.2.1	The Magic Rectangle Condition.....	289
9.2.2	Basic Results on Fusion.....	291
9.2.3	Results on Groups Which Lie in \mathcal{FA}	298
9.2.4	Results on Groups Which Are Not in \mathcal{FA}	299
9.3	Groups Which Fuse from a Cyclic Group	304
9.4	Supercharacters of Upper Triangular Groups.....	306
9.4.1	Symmetric Functions in Non-commuting Variables.....	308
9.5	A Fusion Using Nonassociative Algebra	310
10	Other Situations Involving Group Matrices	313
10.1	Introduction	313
10.2	Characterization of Group Characters	315
10.2.1	The Formal Power Series Attached to a Class Function	315
10.2.2	Pseudorepresentations.....	317
10.3	Group Matrices and Group Rings	318
10.3.1	Taussky-Todd on Normal Group Matrices	318
10.3.2	Other Early Work on Group Matrices	320
10.3.3	The Integral Group Ring Case	321
10.3.4	Some Rings of Matrices which Occur as Group Rings	322
10.3.5	Infinite Groups	323
10.4	Group Matrices and Cogrowth of Groups	324
10.4.1	Cogrowth of Finite Abelian Groups.....	324
10.4.2	The Connection Between Cogrowth and the Group Matrix	326
10.5	Poincaré and the Group Determinant	328
10.6	Chern Classes	329
10.7	Tight Frames and Wavelets	332
10.7.1	Frames and Gramian Matrices	333
10.7.2	Group Frames	334
10.7.3	Projective Group Matrices and Finite Frames	335

10.8	Three-Manifolds	335
10.9	Group Matrices and Electrical Engineering	337
10.10	Higher S-Rings.....	338
A	Spherical Functions on Groups	341
A.1	Spherical Functions in the Infinite Setting	341
A.1.1	Spherical Functions, Special Functions and Gelfand Pairs	342
A.1.2	Examples of Spherical Functions.....	347
B	The Personal Characteristics of Frobenius	351
	Bibliography	355
	Index	367
	Symbol Index	375
