Contents

Introduction 1
Construction and properties 3
Natural Brownian motion and the stochastic heat equation 3
Processes on general and random time-like graphs 3
Open questions and appendix 4

Part 1. Construction and properties 5

Chapter 1. Geometry of time-like graphs 7
1.1. Basic definitions 7
1.2. TLG* family 9
1.3. Consistent representation of a TLG*-tower, spines and (re)construction 13
1.4. Interval TLG*'s 16
1.5. Topology on TLG's 18
1.6. TLG* as a topological lattice 20
1.7. Cell collapse transformation and the stingy algorithm 22
1.8. TLG's with infinitely many vertices 28

Chapter 2. Processes indexed by time-like graphs 31
2.1. Spine-Markovian property 32
2.2. Consistent distributions on paths 34
2.3. Construction from a consistent family 35
2.4. Processes on TLG's with infinite number of vertices 44

Chapter 3. Markov properties of processes indexed by TLG's 49
3.1. Cell-Markov properties 49
3.2. Graph-Markovian and time-Markovian property 51
3.3. Processes on TLG's for Markov family $\mathcal{M}$ 51
3.4. Homogeneous Markov family $\mathcal{M}_{\mathcal{P}}$ 57
3.5. Three simple examples 61

Chapter 4. Filtrations, martingales and stopping times 63
4.1. Expanding the filtrations 63
4.2. Markov martingales 67
4.3. Optional sampling theorem for martingales indexed by directed sets 71
4.4. TLG - valued stopping times 73
4.5. A simple coupling and branching process 75

Part 2. Natural Brownian motion and the stochastic heat equation 77

Chapter 5. Maximums of Gaussian processes 81

5.1. Sequence of Brownian bridges 81
5.2. Sequence of normal variables 83
5.3. Some concentration and convergence results 84

Chapter 6. Random walk and stochastic heat equation reviewed 87
6.1. Modification of the Local Limit Theorem 87
6.2. Approximations of the classical heat equation solution 90
6.3. Euler method for the stochastic heat equation 97
6.4. Convergence of interpolation of the Euler method 105
6.5. Euler method with initial value condition and no external noise 108

Chapter 7. Limit of the natural Brownian motion on a rhombus grid 111
7.1. Natural Brownian motion on a rhombus grid 111
7.2. Network of Brownian bridges 115
7.3. The main result 115

Part 3. Processes on general and random time-like graphs 119

Chapter 8. Non-simple TLG's 121
8.1. New definitions 121
8.2. Embedding TLG's into simple TLG's 122
8.3. TLG** family 124

Chapter 9. Processes on non-simple TLG's 129
9.1. Processes on TLG** 129
9.2. Properties of constructed processes 133
9.3. Properties for Markov family $\mathcal{M}$ 136
9.4. Processes on time-like trees 137

Chapter 10. Galton-Watson time-like trees and the Branching Markov processes 141
10.1. TLG's with an infinite number of vertices 141
10.2. Galton – Watson time-like tree 142
10.3. Processes on TLG**'s with infinite number of vertices 143
10.4. Natural $\mathcal{P}$-Markov process 144
10.5. Branching $\mathcal{P}$-Markov process 144

Open questions and appendix 149

Chapter 11. Open questions 151
11.1. Construction of process on all TLG's 151
11.2. Reconstruction of TLG's based on the process 152
11.3. Strong Markov property, parametrization, evolution over time,... 154

Appendix A. Independence and processes 155
A.1. Conditional independence and expectations 155
A.2. Construction of a conditional sequence 155
A.3. Markov and Brownian bridges 156
A.4. Markov random fields 159
A.5. White noise 160
A.6. The stochastic heat equation 161

A.7. Crump - Mode - Jagers trees 163
A.8. Branching Markov processes and branching Brownian motion 164
