|  |    |
|--|----|
| Chapter 1. Introduction and Main Result                  | 1  |
| 1.1. The Ginzburg-Rallis model                           | 1  |
| 1.2. Main results  | 3  |
| 1.3. Organization of the paper and remarks on the proofs | 4  |
| 1.4. Acknowledgements                                    | 6  |
| Chapter 2. Preliminaries                                 | 7  |
| 2.1. Notation and conventions                            | 7  |
| 2.2. Measures  | 8  |
| 2.3. $(G, M)$ -families                                  | 9  |
| 2.4. Weighted orbital integrals                          | 9  |
| 2.5. Shalika Germs                                       | 10 |
| Chapter 3. Quasi-Characters                              | 13 |
| 3.1. Neighborhoods of Semisimple Elements                | 13 |
| 3.2. Quasi-characters of $G(F)$                          | 14 |
| 3.3. Quasi-characters of $\mathfrak{g}(F)$               | 14 |
| 3.4. Localization  | 14 |
| Chapter 4. Strongly Cuspidal Functions                   | 17 |
| 4.1. Definition and basic properties                     | 17 |
| 4.2. The Lie algebra case                                | 18 |
| 4.3. Localization  | 18 |
| Chapter 5. Statement of the Trace Formula                | 21 |
| 5.1. The ingredients of the integral formula             | 21 |
| 5.2. The Main Theorem                                    | 23 |
| 5.3. The Lie Algebra Case                                | 25 |
| Chapter 6. Proof of Theorem 1.3                          | 27 |
| 6.1. Definition of multiplicity                          | 27 |
| 6.2. Proof of Theorem 1.3                                | 29 |
| Chapter 7. Localization                                  | 31 |
| 7.1. A Trivial Case                                      | 31 |
| 7.2. Localization of $I_N(f)$                            | 31 |
| 7.3. Localization of $I(f)$                              | 35 |
| Chapter 8. Integral Transfer                             | 37 |
| 8.1. The Problem   | 37 |
| 8.2. Premier Transform                                   | 38 |

|              |  |    |
|--------------|--|----|
| 8.3.         | Description of affine space $\Xi + \Sigma$                                 | 38 |
| 8.4.         | Orbit in $\Xi + \Lambda^0$   | 39 |
| 8.5.         | Local Sections   | 44 |
| 8.6.         | Calculation of $I_\kappa(f)$   | 44 |
| Chapter 9.   | Calculation of the limit $\lim_{N \rightarrow \infty} I_{x,\omega,N}(f)$   | 47 |
| 9.1.         | Convergence of a premier expression  | 47 |
| 9.2.         | Combinatorial Definition   | 49 |
| 9.3.         | Change the truncated function  | 50 |
| 9.4.         | Proof of 9.3(5)  | 53 |
| 9.5.         | Proof of 9.3(6)  | 54 |
| 9.6.         | The split case   | 58 |
| 9.7.         | Principal proposition  | 61 |
| Chapter 10.  | Proof of Theorem 5.4 and Theorem 5.7                                       | 63 |
| 10.1.        | Calculation of $\lim_{N \rightarrow \infty} I_N(f)$ : the Lie algebra case | 63 |
| 10.2.        | A Premier Result   | 64 |
| 10.3.        | Proof of Theorem 5.4 and Theorem 5.7                                       | 66 |
| 10.4.        | The proof of $I(f''_b) = J(f''_b)$   | 68 |
| Appendix A.  | The Proof of Lemma 9.1 and Lemma 9.11                                      | 71 |
| A.1.         | The Proof of Lemma 9.1   | 71 |
| A.2.         | The proof of Lemma 9.11  | 74 |
| A.3.         | A final remark   | 79 |
| Appendix B.  | The Reduced Model  | 81 |
| B.1.         | The general setup  | 81 |
| B.2.         | The trilinear model  | 82 |
| B.3.         | The generalized trilinear $GL_2$ models                                    | 83 |
| B.4.         | The middle model   | 84 |
| B.5.         | The type II models   | 85 |
| Bibliography |  | 89 |
