<i>Preface</i>	ix
<i>Acknowledgements</i>	xi
<i>List of abbreviations</i>	xiii
<i>List of contributors</i>	xv
1. Minimalist parsing	1
<i>Robert C. Berwick and Edward P. Stabler</i>	
1.1 A perspective on language and parsing	1
1.2 This volume	5
1.3 Minimalist-inspired formalisms	7
1.4 Conclusion	15
2. Towards a Minimalist Machine	16
<i>Sandiway Fong and Jason Ginsburg</i>	
2.1 Introduction	16
2.2 Free or feature-driven movement	16
2.3 Computational cyclicity	19
2.4 Architecture overview	22
2.5 Fundamental operations	22
2.6 The decision procedure P	25
2.7 Non-determinism revisited	35
2.8 Computational cyclicity revisited	36
2.9 Further remarks and conclusions	37
3. Combining linguistic theories in a Minimalist Machine	39
<i>Jason Ginsburg and Sandiway Fong</i>	
3.1 Introduction	39
3.2 Multiple Agree (Chomsky 2001)	40
3.3 Expletives (Chomsky 2001)	43
3.4 Thematization/Extraction (Th/Ex) (Chomsky 2001; Sobin 2014)	44
3.5 <i>That</i> -trace effects and subject vs. object <i>wh</i> -movement (Pesetsky and Torrego 2001)	52
3.6 Relative Clauses (Pesetsky and Torrego 2001; Gallego 2006)	61
3.7 Conclusion	68
4. Parsing with Minimalist Grammars and prosodic trees	69
<i>Kristine M. Yu</i>	
4.1 Introduction	69
4.1.1 Previous work on prosodically informed syntactic parsers	71
4.1.2 The syntax–prosody interface	73
4.2 Samoan syntax, spellout, prosody, and interfaces: background	82
4.2.1 Samoan syntax and spellout	83

4.2.2	Samoan prosodic constituency	86
4.2.3	The Samoan syntax-prosody interface	92
4.3	Samoan syntax, spellout, prosody, and interfaces: implementation	96
4.3.1	Generation of candidate prosodic parses with an <i>xfst</i> transducer	97
4.3.2	Syntactic/post-syntactic grammar fragment: MG lexicon and derivation	99
4.3.3	Simultaneous (post-)syntactic parsing and MATCHPHRASE computation	102
4.3.4	Final phonological transduction after MG parse: STRONGSTART	107
4.4	Discussion and conclusion	108
5.	Parsing ellipsis efficiently	110
	<i>Gregory M. Koble</i>	
5.1	Introduction	110
5.2	Ellipsis in minimalist grammars	111
5.2.1	Minimalist grammars	112
5.2.2	Derivational structure	113
5.2.3	Ellipsis	114
5.2.4	Hypothetical derivations	115
5.2.5	Ellipsis operations	116
5.2.6	Interpreting ellipsis	117
5.2.7	An example	118
5.3	The complexity of ellipsis resolution	119
5.3.1	Parsing in the presence of ellipsis	119
5.3.2	Resolving ellipsis	120
5.3.3	Updating the discourse context	121
5.3.4	Eliding maximal projections	122
5.3.5	Bounding ellipsis	122
5.3.6	Stopping silence	123
5.4	Conclusion	123
6.	Left-corner parsing of minimalist grammars	125
	<i>Tim Hunter</i>	
6.1	Human processing of long-distance dependencies	126
6.1.1	Empirical background	126
6.1.2	Retrieval decisions as ambiguity resolution	128
6.2	The top-down MG parser	129
6.3	Towards a left-corner MG parser	133
6.3.1	CFG left-corner parsing	133
6.3.2	Basic cases	135
6.3.3	Multiple movements	143
6.4	Dealing with remnant movement	147
6.4.1	An outline of the challenge	147
6.4.2	Outline of a candidate solution	150
6.5	Empirical connections based on what we have so far	156
6.5.1	Active gap-filling	156
6.5.2	Island sensitivity	156
6.6	Conclusion	157
7.	Grammatical predictors for fMRI time-courses	159
	<i>Jixing Li and John Hale</i>	
7.1	Introduction	159

7.2 Parameters in neuro-computational models of sentence processing	160
7.2.1 Grammar	161
7.2.2 Parsing strategy	164
7.2.3 Complexity metrics	164
7.2.4 Summary	165
7.3 Other factors influencing sentence processing	165
7.3.1 Word-to-word associations	165
7.3.2 Lexical-semantic coherence	166
7.4 Correlating fMRI time-courses with various metrics during natural story listening	166
7.4.1 Complexity metrics	166
7.4.2 Data acquisition	168
7.4.3 Data analysis	169
7.4.4 Results	170
7.5 Towards a functional anatomy of sentence comprehension	172
