
CONTENTS

PREFACE	vii
INTRODUCTION	1
The general problem	1
Theorizing	2
Portfolio theory and capital market theory	3
History	3
Plan of the book	4

PORTFOLIO THEORY**1**

CERTAINTY	7
Borrowing and lending	7
Selecting a consumption pattern	8
Wealth	9
Selecting an income pattern	10
Accepting or rejecting an investment	10
Choosing among alternative investments	13
Divisible investments	13
Certainty versus uncertainty	15
Short run versus long run	16
Terminology	17

2

PORTFOLIOS	18
The problem	18
Stating predictions—an intuitive approach	20
Stating predictions—a “scientific” approach	21
The equality of the two approaches	24
Subjectivity and objectivity	25
Risk and uncertainty	25
Investors’ preferences	26
Choosing a portfolio	30
The three phases	31
Portfolio analysis	32

3

SECURITIES	34
Securities and portfolios	34
The rate of return on a portfolio	35
Stating predictions about individual securities	36
Interrelationships	37
Correlation	37
Covariance	41
Expected return	42
Standard deviation of return	42

4

EFFICIENT PORTFOLIOS	45
Combining securities	45
The E_p, σ_p region	52
The E_p, V_p region	53
The objective	55
Finding the set of efficient portfolios	58
The basic problem	59
Constraints	62
The standard problem	64
Borrowing and lending	66
The optimal combination of risky securities	69

PART **II**.

**CAPITAL MARKET
THEORY**

5

AGREEMENT	77
Basic assumptions	77
Financial securities and capital assets	78
The market portfolio	81
The capital market line	83
The security market line	86
Volatility	91
Systematic risk	96
Efficient portfolios and systematic risk	97
Adjustment	98
Implications	101

6

DISAGREEMENT	104
The problem	104
Capital market lines	105
Equilibrium prices	107
Securities	107
Security market lines	109
Limitations on portfolios	110
The remains	112

**APPLICATIONS
AND EXTENSIONS**
7

INDEX MODELS	117
The problem	117
A single-index model	118
Multi-index models	122
Responsiveness as a measure of risk	128
Portfolio analysis using responsiveness as a measure of risk	131
Index models and capital market theory	139

8

THE RECORD	141
Past versus future	141
Statistics and predictions	142
The market portfolio	143
The effectiveness of diversification	146
Market and industry factors	150
Measuring performance	152
Mutual-fund performance	160
The shapes of distributions	175
Using the past to predict the future	179

9

UTILITY	187
Expected utility	187
Risk aversion	193
Quadratic utility functions	196

10

STATE-PREFERENCE THEORY	202
States	203
Preferences	203
Securities	205
The riskless portfolio	211
The market portfolio	213

The market line	214
Market similarity	215

SUPPLEMENT
THE MATHEMATICAL
FOUNDATION

A

ESSENTIAL INGREDIENTS	223
Minimization	223
Derivatives	226
Simultaneous equations	231
Parametric solutions	237
Lagrange multipliers	239

B

SOLVING A BASIC PROBLEM	244
The solution	244
Additional constraints	249
The separation theorem	251
Uniqueness	255

C

SOLVING A STANDARD PROBLEM	257
The Kuhn-Tucker conditions	257
Finding a specific solution	260
Finding the next solution	262
The critical-line algorithm	268
Degeneracy	270
Other methods	273

D

SECURITY PRICES	274
Making the market portfolio an optimal combination of risky securities	274
Expected return, risk, and security prices	282
Security prices and the capital market line	283
Borrowing and lending	286
Present versus future consumption	288
Equilibrium with disagreement	291

E	
PORTFOLIO ANALYSIS WITH SIMPLIFIED MODELS	294
Portfolio analysis with index models	294
Portfolio analysis based on responsiveness	300
BIBLIOGRAPHY	303
INDEX	313
