Contents

1 Introduction

1.1 Geometric and dynamical tools 2
1.2 The distribution of common perpendiculars 6
1.3 Counting in weighted graphs of groups 11
1.4 Selected arithmetic applications 15
1.5 General notation 19

Part I Geometry and Dynamics in Negative Curvature

2 Negatively Curved Geometry

2.1 Background on CAT(−1) spaces 23
2.2 Generalised geodesic lines 29
2.3 The unit tangent bundle 31
2.4 Normal bundles and dynamical neighbourhoods 36
2.5 Creating common perpendiculars 40
2.6 Metric and simplicial trees, and graphs of groups 41
Discrete-time geodesic flow on trees 43
Cross-ratios of ends of trees 44
Bass–Serre's graphs of groups 44

3 Potentials, Critical Exponents, and Gibbs Cocycles

3.1 Background on (uniformly local) Hölder continuity 49
3.2 Potentials 65
3.3 Poincaré series and critical exponents 70
3.4 Gibbs cocycles 74
3.5 Systems of conductances on trees and generalised electrical networks 79

4 Patterson–Sullivan and Bowen–Margulis Measures with Potential on CAT(−1) Spaces
4.1 Patterson densities 83
4.2 Gibbs measures 87
The Gibbs property of Gibbs measures 88
The Hopf–Tsuji–Sullivan–Roblin theorem 89
On the finiteness of Gibbs measures 90
Bowen–Margulis measure computations in locally symmetric spaces 92
On the cohomological invariance of Gibbs measures 95
4.3 Patterson densities for simplicial trees 97
4.4 Gibbs measures for metric and simplicial trees 100

5 Symbolic Dynamics of Geodesic Flows on Trees
5.1 Two-sided topological Markov shifts 111
5.2 Coding discrete-time geodesic flows on simplicial trees 112
5.3 Coding continuous-time geodesic flows on metric trees 125
5.4 The variational principle for metric and simplicial trees 132

6 Random Walks on Weighted Graphs of Groups
6.1 Laplacian operators on weighted graphs of groups 141
6.2 Patterson densities as harmonic measures for simplicial trees . . . 147

7 Skinning Measures with Potential on CAT(−1) Spaces
7.1 Skinning measures 155
7.2 Equivariant families of convex subsets and their skinning measures 165

8 Explicit Measure Computations for Simplicial Trees and Graphs of Groups
8.1 Computations of Bowen–Margulis measures for simplicial trees 170
8.2 Computations of skinning measures for simplicial trees 175

9 Rate of Mixing for the Geodesic Flow
9.1 Rate of mixing for Riemannian manifolds 181
9.2 Rate of mixing for simplicial trees 182
9.3 Rate of mixing for metric trees 194

Part II Geometric Equidistribution and Counting

10 Equidistribution of Equidistant Level Sets to Gibbs Measures
10.1 A general equidistribution result 207

10.2 Rate of equidistribution of equidistant level sets for manifolds 213
10.3 Equidistribution of equidistant level sets on simplicial graphs and random walks on graphs of groups 215
10.4 Rate of equidistribution for metric and simplicial trees 220

11 Equidistribution of Common Perpendicular Arcs
11.1 Part I of the proof of Theorem 11.1: The common part 228
11.2 Part II of the proof of Theorem 11.1: The metric tree case 230
11.3 Part III of the proof of Theorem 11.1: The manifold case 234
11.4 Equidistribution of common perpendiculars in simplicial trees . . . 242

12 Equidistribution and Counting of Common Perpendiculars in Quotient Spaces
12.1 Multiplicities and counting functions in Riemannian orbifolds . . . 254
12.2 Common perpendiculars in Riemannian orbifolds 256
12.3 Error terms for equidistribution and counting for Riemannian orbifolds 260
12.4 Equidistribution and counting for quotient simplicial and metric trees 264
12.5 Counting for simplicial graphs of groups 271
12.6 Error terms for equidistribution and counting for metric and simplicial graphs of groups 278

13 Geometric Applications
13.1 Orbit counting in conjugacy classes for groups acting on trees 287
13.2 Equidistribution and counting of closed orbits on metric and simplicial graphs (of groups) 291

Part III Arithmetic Applications

14 Fields with Discrete Valuations
14.1 Local fields and valuations 299
14.2 Global function fields 301

15 Bruhat–Tits Trees and Modular Groups
15.1 Bruhat–Tits trees 307
15.2 Modular graphs of groups 311
15.3 Computations of measures for Bruhat–Tits trees 313
15.4 Exponential decay of correlation and error terms for arithmetic quotients of Bruhat–Tits trees 318
15.5 Geometrically finite lattices with infinite Bowen–Margulis measure 325

16 Equidistribution and Counting of Rational Points in Completed Function Fields
16.1 Counting and equidistribution of non-Archimedean Farey fractions 329
16.2 Mertens's formula in function fields 338

17 Equidistribution and Counting of Quadratic Irrational Points in Non-Archimedean Local Fields
17.1 Counting and equidistribution of loxodromic fixed points 342
17.2 Counting and equidistribution of quadratic irrationals in positive characteristic 346
17.3 Counting and equidistribution of quadratic irrationals in $\mathbb{Q}_p$ . . . 354

18 Equidistribution and Counting of Cross-ratios
18.1 Counting and equidistribution of cross-ratios of loxodromic fixed points 362
18.2 Counting and equidistribution of cross-ratios of quadratic irrationals 368

19 Equidistribution and Counting of Integral Representations by Quadratic Norm Forms 371

Appendix by J. Buzzi: A Weak Gibbs Measure is the Unique Equilibrium
A.1 Introduction 377
A.2 Proof of the main result, Theorem A.4 381

List of Symbols 387

Bibliography 395
