

# Contents

<i>Preface</i> .....	v
<i>Contributors</i> .....	xi
PART I INTRODUCTION	
1 Diabetic Nephropathy: An Overview .....	3
<i>Manpreet K. Sagoo and Luigi Gnudi</i>	
PART II EXPERIMENTAL MODELS TO STUDY DIABETIC NEPHROPATHY	
2 Modeling Podocyte Biology Using <i>Drosophila</i> Nephrocytes .....	11
<i>Paul S. Hartley and Richard J. Coward</i>	
3 A Technique for Studying Glomerular Filtration Integrity in the Zebrafish Pronephros .....	25
<i>Maria Kolatsi-Joannou and Daniel Osborn</i>	
4 Modeling Human Diabetic Kidney Disease by Combining Hyperglycemia and Hypertension in a Transgenic Rodent Model .....	41
<i>Carolynn Cairns and Bryan Conway</i>	
5 Isolating and Culturing Mouse Podocyte Cells to Study Diabetic Nephropathy .....	53
<i>Elisavet Vasilopoulou</i>	
PART III TECHNIQUES TO IMAGE THE DIABETIC KIDNEY	
6 Histological Examination of the Diabetic Kidney .....	63
<i>Camillo Carrara, Mauro Abbate, Sara Conti, Daniela Rottoli, Paola Rizzo, and Gianfranco Marchetti</i>	
7 Sample Preparation and Stereological Methods for the Study of Glomerular Ultrastructure Using Electron Microscopy .....	89
<i>Kathryn E. White</i>	
8 Tissue Clearing and Deep Imaging of the Kidney Using Confocal and Two-Photon Microscopy .....	103
<i>Daniyal J. Jafree, David A. Long, Peter J. Scambler, and Dale Moulding</i>	
PART IV ASSESSING THE FUNCTION AND PATHOPHYSIOLOGICAL PROPERTIES OF THE DIABETIC KIDNEY	
9 Transcutaneous Measurement of Glomerular Filtration Rate in Rodents .....	129
<i>Cristina Daniele, Daniela Nardozi, Angelo Torelli, Arif ul Maula Khan, and Norbert Gretz</i>	

10	An In Vitro Method to Analyze Glucose Uptake in Podocytes <i>Abigail C. Lay and Richard J. Coward</i>	139
11	Glomerular Endothelial Cells: Assessment of Barrier Properties In Vitro. <i>Raina D. Ramnath and Simon C. Satchell</i>	145
12	Methods to Detect Endoplasmic Reticulum Stress and Apoptosis in Diabetic Nephropathy. <i>Khurrum Shahzad, Sanchita Ghosh, Akash Mathew, and Berend Isermann</i>	153
13	Isolating Urinary Extracellular Vesicles as Biomarkers for Diabetic Disease. <i>Karina Barreiro, Tobias B. Huber, and Harry Holtzner</i>	175
14	Examining Cell-Cell Interactions in the Kidney Using AFM Single-Cell Force Spectroscopy. <i>Eleftherios Siamantouras, Claire E. Hills, Kuo-Kang Liu, and Paul E. Squires</i>	189
PART V TRANSCRIPTOME, METABOLIC, AND PROTEOMIC PROFILING OF THE DIABETIC KIDNEY		
15	Genetic Strategies to Understand Human Diabetic Nephropathy: Wet-Lab Approaches <i>Laura J. Smyth, Katie Kerr, Seamus Duffy, Jill Kilner, and Amy Jayne McKnight</i>	205
16	Genetic Strategies to Understand Human Diabetic Nephropathy: In Silico Strategies for Molecular Data—Association Studies <i>Marisa Canadas-Garre, Laura J. Smyth, Kerry Anderson, Katie Kerr, and Amy Jayne McKnight</i>	241
17	Assessment of Urinary MicroRNAs by Quantitative Polymerase Chain Reaction in Diabetic Nephropathy Patients <i>Lucy Jade Newbury, Alexa Wonnacott, Kate Simpson, Timothy Bowen, and Donald Fraser</i>	277
18	Metabolomic and Proteomic Techniques for Establishing Biomarkers and Improving Our Understanding of Pathophysiology in Diabetic Nephropathy <i>Justyna Siwy, Linda Abonen, Pedro Magalhães, Maria Frantzi, and Peter Rassing</i>	287
PART VI NEW APPROACHES: GENE EDITING AND STEM CELLS TO STUDY DIABETIC KIDNEY DISEASE		
19	Formation of Mature Nephrons by Implantation of Human Pluripotent Stem Cell-Derived Progenitors into Mice <i>Ioannis Bantounas, Edina Silajdžić, Adrian S. Woolf, and Susan J. Kimber</i>	309

20	Generating Mutant Renal Cell Lines Using CRISPR Technologies.....	323
	<i>Nuria Perretta-Tejedor, Grace Freke, Marian Seda, David A. Long, and Dagan Jenkins</i>	
	<i>Index</i> .....	<i>341</i>
