Foreword by Robert Aumann	<i>page xi</i>
Acknowledgment	xiii
Chapter 1. Introduction	1
1.1 The labor market for medical interns	2
1.1.1 Some institutional history	2
1.1.2 The questions to be answered	5
1.1.3 A preview of the proposed explanation	6
1.2 Individual and collusive behavior in auction markets	8
1.3 The game-theoretic approach	10
1.3.1 The organization of this book	12
1.4 Guide to the literature	13
Part I. One-to-one matching: the marriage model	15
Chapter 2. Stable matchings	17
2.1 The formal (cooperative) model	17
2.2 Stable matchings – a theoretical framework	20
2.3 Some properties of stable matchings	23
2.4 Extending the domain of the theory: some examples	39
2.5 A concise mathematical treatment when preferences are strict	41
2.5.1 When preferences need not be strict	48
2.6 Guide to the literature	50
Chapter 3. The structure of the set of stable matchings	54
3.1 The core of a game	54
3.1.1 Lattices and the algebraic structure of the set of stable matchings	59
3.2 Computational questions	60

3.2.1	An algorithm to compute every stable matching	61
3.2.2	The number of stable matchings	66
3.2.3	Finding all achievable pairs	68
3.2.4	The linear structure of the set of stable matchings	69
3.3	Guide to the literature	75
Chapter 4.	Strategic questions	78
4.1	A formal strategic model	82
4.1.1	Dominant strategies	83
4.2	The impossibility of a "strategy proof" stable mechanism	85
4.2.1	Stable matching mechanisms	87
4.3	The incentives facing the men when an M -optimal stable matching mechanism is employed	89
4.3.1	The robustness of these conclusions	94
4.4	The incentives facing the women when an M -optimal stable matching mechanism is employed	95
4.4.1	Strategic equilibrium	96
4.4.1.1	The interpretation of equilibrium	96
4.4.2	Equilibrium behavior	99
4.4.3	Good and bad strategies	104
4.5	Incomplete information about others' preferences	107
4.5.1	Revelation games	110
4.5.2	Equilibrium and stability	112
4.5.3	Dominant and dominated strategies	117
4.5.4	Discussion of the incomplete and complete information models	118
4.6	Guide to the literature	119
	Part II. Many-to-one matching: models in which firms may employ many workers	123
Chapter 5.	The college admissions model and the labor market for medical interns	125
5.1	The formal model	125
5.1.1	Preferences over matchings	127
5.2	Stability and group stability	129
5.3	The connection between the college admissions model and the marriage model	131
5.3.1	A related marriage market	131
5.3.2	Limitations to the relationship with the marriage market	133

Contents	ix
5.4 The labor market for medical interns	134
5.4.1 The NIMP algorithm	134
5.4.2 The NIMP algorithm is a stable matching mechanism	137
5.4.3 Married couples	140
5.4.4 The geographic distribution of interns	143
5.4.5 Strategic questions	145
5.5 Some further remarks on empirical matters	148
5.5.1 Regional markets for physicians and surgeons in the United Kingdom	149
5.5.1.1 Some unstable mechanisms: the experience with priority matching	150
5.5.1.2 Some modeling issues	153
5.6 Comparisons of stable matchings in the college admissions model	157
5.6.1 The main results: an example	157
5.6.2 The main results	159
5.6.2.1 When preferences over individuals are not strict	162
5.6.3 Further results for the college admissions model	163
5.7 Stable matchings and the core	166
5.8 Guide to the literature	168
Chapter 6. Discrete models with money, and more complex preferences	171
6.1 The college admissions model with "substitutable" preferences	171
6.2 A model with money and complex preferences	177
6.3 Guide to the literature	184
 Part III. Models of one-to-one matching with money as a continuous variable	 187
Chapter 7. A simple model of one seller and many buyers	189
7.1 The core of the game	190
7.1.1 Relationship to the results for the marriage model	193
7.2 Strategic questions	194
7.2.1 Bidder rings at auctions	198
7.3 Guide to the literature	201
Chapter 8. The assignment game	202
8.1 The formal model	202

8.2	The core of the assignment game	206
8.3	A multiobject auction mechanism	209
8.4	Incentives	212
8.5	The effect of new entrants	215
8.6	Guide to the literature	219
Chapter 9.	A generalization of the assignment model	222
9.1	The model	222
9.2	The core	225
9.2.1	Some technical results	230
9.2.2	The structure of the core	233
9.3	Incentives	
9.4	Guide to the literature	238
	Part IV. Epilogue	241
Chapter 10.	Open questions and research directions	245
	Bibliography	249
	Name index	259
	Subject index	263
