Preface	ix
The Editors	xix
Introduction	1
Part I: Technology, Environment, and Growth	10
1. Technology and Organization in Manufacturing	14
<i>Peter M. Blau, Cecilia M. Falbe, William McKinley, Phelps K. Tracy</i>	
Automation reinforces trends begun by process technologies, such as specialization and increased ratios of supervisory and staff personnel.	
2. Computers and Management Structure: Some Empirical Findings Reexamined	33
<i>Daniel Robey</i>	
Depending on the task environmental conditions, computerized systems are sufficiently flexible to facilitate either centralized or decentralized structures.	
3. Growth and Decline Processes in Organizations	43
<i>John Freeman, Michael T. Hannan</i>	
In a study of school districts, the administrative component is greater in relation to the production component in periods of decline than in periods of growth.	

4. The External Environment: Effects of Change on Environmental Dynamism and Complexity 59
Mary F. Mericle
 Allocation of resources to boundary activities is related to environmental complexity but not environmental change in a decision-making simulation.
5. The Scarcity-Munificence Component of Organizational Environments and the Commission of Illegal Acts 65
Barry M. Staw, Eugene Sz wajkowski
 Data on companies cited for unfair market practices and restraint of trade show that environmental scarcity is related to the occurrence of illegal organization acts.
- Part II: Organizational Characteristics and Roles 75**
6. On Being Sane in Insane Places 79
David L. Rosenhan
 Pseudopatients entering a mental hospital on the basis of a faked symptom are not detected by staff members, including nurses and doctors.
7. Multinational Corporations and International Professional Associations 94
William M. Evan
 The recent rapid growth of multinational organizations raises questions about linkages with nation states and other components of international systems.
8. Dimensions of Management System and Performance in Continuous-Process Organizations 113
Robert T. Keller
 Organic management systems with less emphasis on rules than mechanistic systems have higher profitability and subjective performance ratings.
9. Determinants of Supervisory Behavior: A Role-Set Analysis 126
Jeffrey Pfeffer, Gerald R. Salancik
 Supervisors in the housing division of a large university conclude that expectations of bosses influence work-related behaviors of supervisors and expectations of subordinates influence social behavior.
10. Organizational Role Conflict: Its Antecedents and Consequences 136
Robert H. Miles, William D. Perreault, Jr.
 Five conflict orientation groups are isolated among professional-level employees in nine organizations, implying that conflict management cannot assume a single generalized role conflict variable.

11. Some Variables Affecting a Constituent's Evaluations of and Behavior Toward a Boundary Role Occupant 157
James A. Wall, Jr., J. Stacy Adams
 In a laboratory experiment the evaluations of salesmen by members of their own organizations are based on obedience to the evaluators' directives rather than the market's receptiveness to the product.
- Part III: Effectiveness and Performance** 172
12. Organizational Effectiveness and the Institutional Environment 175
Paul M. Hirsch
 The typical pharmaceutical manufacturing firm is more profitable than the typical phonograph record company because of its greater control of pricing and distribution, patent and copyright laws, and external opinion leaders.
13. School District Organization and Student Achievement 193
Charles E. Bidwell, John D. Kasarda
 Staff qualifications foster student achievement, but unfavorable pupil-teacher ratios and administrative intensity depress median levels of achievement.
14. Effectiveness of an Attendance Control Policy in Reducing Chronic Absenteeism 211
John F. Baum
 A field experiment in automobile factories demonstrates that implementation of attendance control reduces absenteeism among poor attenders.
15. Work Attitudes as Predictors of Attendance on a Specific Day 219
Frank J. Smith
 The attendance of salaried employees during a severe snow storm is clearly related to job-satisfaction levels.
16. Measuring the Financial Impact of Employee Attitudes 224
Philip H. Mirvis, Edward E. Lawler III
 Estimates of the monetary effect of attitudes on a firm's finances can be made on the basis of attitude correlations with absenteeism, turnover, and shortages.
- Part IV: Motivation** 234
17. The Transmission of Control Through Organizational Hierarchy 240
William G. Ouchi
 Output control can be accurately transmitted through three levels of hierarchy while behavior control exhibits little consistency across these levels.

18. Effects of Contingent and Noncontingent Reward on the Relationship Between Satisfaction and Task Performance 257
David J. Cherrington, H. Joseph Reitz, William E. Scott, Jr.
 In this laboratory experiment, job satisfaction is related to productivity when performance is rewarded but not when rewards are lacking.
19. Equity and Intrinsic Motivation: The Role of Choice 265
Robert Folger, David Rosenfield, Robert P. Hays, Jr.
 A laboratory experiment finds that with low choice high pay leads to greater productivity or intrinsic motivation; with high choice, the relationship is reversed.
20. What Workers Want: Factor Analyses of Important Ratings of Job Facets 275
Robert P. Quinn, William Cobb, Jr.
 Factor analysis of ratings of the importance of various job aspects reveals five factors: comfort, challenge, financial rewards, relation with co-workers, and resources.
21. Autonomy and Participation at Work 284
Bertil Gardell
 Worker demands for participation in representative democratic processes increase with greater personal job autonomy.
- Part V: Communication 299**
22. Organization Structure and Communications 302
Jerald Hage, Michael Aiken, Cora B. Marrett
 As organizations become more differentiated, horizontal communication, both formal and informal, increases more than vertical communication.
23. Communication in Administrative Bureaucracies 316
Samuel B. Bacharach, Michael Aiken
 In local governmental bureaucracies, such organizational variables as size and shape explain variance in frequency of subordinate communication better than variance in department head communication.
24. The Intentional Distortion of Information in Organizational Communication: A Laboratory and Field Investigation 328
Charles A. O'Reilly III
 The interpersonal variable of sender-receiver trust mediates the impact of organizational variables on communication.
25. Organizational Communication Network Analysis: The Liaison Communication Role 345
Donald F. Schwartz, Eugene Jacobson
 In a sociometric investigation of a college's professional staff, liaison persons are identified as individuals with reciprocal contacts with members of two other groups.

Part VI: Leadership and Decision Making		359
26.	<p>Managerial Achievement: The Personal Side of Behavioral Theory <i>Jay Hall, Susan M. Donnell</i></p> <p style="padding-left: 40px;">In terms of self-reports and subordinate appraisals, high achieving managers are more likely to follow humanistic management philosophies than are low achieving managers.</p>	366
27.	<p>On the Validity of the Vroom-Yetton Model <i>Victor H. Vroom, Arthur G. Jago</i></p> <p style="padding-left: 40px;">Managers' descriptions of problem-solving situations are compared with the processes specified in the Vroom-Yetton contingency model; successful solutions occur when the rules of the model are followed.</p>	384
28.	<p>Organizational Decision Making as a Political Process: The Case of a University Budget <i>Jeffrey Pfeffer, Gerald R. Salancik</i></p> <p style="padding-left: 40px;">After controlling for work load and number of faculty, measures of departmental power are related to the proportion of the budget received.</p>	397
Part VII: Work and Health		414
29.	<p>Conflict, Ambiguity, and Overload: Three Elements in Job Stress <i>Robert L. Kahn</i></p> <p style="padding-left: 40px;">The development of research on role conflict is traced through six studies, which concentrate on various aspects of conflict.</p>	418
30.	<p>Occupational Stress and Health Among Factory Workers <i>James S. House, Anthony J. McMichael, James A. Wells, Berton H. Kaplan, Lawrence R. Landerman</i></p> <p style="padding-left: 40px;">Perceived occupational stress is related to self-reports of ill health among workers and to medical conditions for a subset of men who received medical examinations.</p>	429
31.	<p>Person-Role Fit <i>John R. P. French, Jr.</i></p> <p style="padding-left: 40px;">The goodness of fit between person and role is related to job satisfaction and job strain; social support can buffer the relationship between stress and strain.</p>	444
32.	<p>Physiologic Changes in Men Whose Jobs Were Abolished <i>Sidney Cobb</i></p> <p style="padding-left: 40px;">Meaningful changes in norepinephrine excretion, serum creatinine, serum uric acid, and serum cholesterol are associated with the stress of job termination.</p>	451

Part VIII: Conflict and Change		465
33.	The Effects of Organizational Level on Perceptions of Role-Conflict Resolution Strategy <i>H. John Bernardin, Kenneth M. Alvares</i> In ratings of leadership effectiveness of first-line supervisors employing various conflict resolution strategies, superiors find a forcing strategy more effective and subordinates prefer confrontation.	471
34.	The Impact of Initial Bargaining Position and Alternative Modes of Third-Party Intervention in Resolving Bargaining Impasses <i>William J. Bigoness</i> Subjects bargain most successfully under high-conflict conditions in the absence of outside intervention, but third party intervention facilitates bargaining settlements when subjects face low conflict.	478
35.	Reactions to Procedural Models for Adjudicative Conflict Resolution <i>E. Allan Lind, Bonnie E. Erickson, Nehemia Friedland, Michael Dickenberger</i> College students in the United States, Great Britain, France, and West Germany evaluate different adjudicative models in resolving conflict and agree in their preference for adversary over inquisitorial models.	489
36.	OD Techniques and Their Results in Twenty-Three Organizations: The Michigan ICL Study <i>David G. Bowers</i> Survey feedback is associated with more organizational improvement than such developmental treatments as interpersonal process consultation, task process consultation, and laboratory training.	506
37.	The Comparative Impacts of Sociotechnical System, Job-Redesign, and Survey-Feedback Interventions <i>William A. Pasmore</i> In combination with survey feedback, job redesign has positive effects on worker attitudes but it is more crucial for improvements in productivity.	523
38.	Participative Decision Making: An Experimental Study in a Hospital <i>J. E. Bragg, I. Robert Andrews</i> After introducing participative decision making into the laundry unit of a hospital, attitudes improve, absence rates decline, and productivity increases.	531
	Conclusion	537
	Name Index	555
