Contents

PREFACE iii

1 STATEMENT OF THE PROBLEM 1

1.1 History of the Problem 1
1.2 The Classical Linear Model 3
1.3 The Gurtin-MacCamy Model 10
1.4 Formulation of a General Model 14
1.5 Notes 23

2 BASIC THEORY OF THE SOLUTIONS 25

2.1 Preliminaries 25
2.2 Local Existence and Continuous Dependence on Initial Age Distributions 29
2.3 The Semigroup Property and Continuability of the Solutions 42
2.4 Positivity of Solutions 46
2.5 Continuous Dependence on the Birth and Aging Functions 52
2.6 Regularity of the Solutions 55
2.7 Notes 72

3 THE NONLINEAR SEMIGROUP ASSOCIATED WITH THE SOLUTIONS 73

3.1 The Nonlinear Semigroup 73
3.2 The Infinitesimal Generator 79
3.3 The Exponential Representation 89
3.4 Compactness of the Trajectories 99
3.5 Approximation of the Solutions 113
3.6 Notes 132

4 EQUILIBRIUM SOLUTIONS AND THEIR STABILITY 135

4.1 Existence of Nontrivial Equilibrium Solutions 135
4.2 Liapunov Functions and the Invariance Principle 145
4.3 Stability and Instability in the Linear Case 162
4.4 The Method of Linearization for the Semilinear Case 192

4.5 The Method of Linearization for the Nonlinear Case 216
4.6 Notes 240

5 BIOLOGICAL POPULATION MODELS 242

5.1 Species Interaction 242
5.2 Population Genetics 248
5.3 Epidemic Populations 254
5.4 Logistic Populations 263
5.5 Notes 269
