1 The fearful spheres of Pascal and Parmenides	1
2 Everything an economist needs to know about physics but was probably afraid to ask: The history of the energy concept	11
<i>Energy before “energy”</i> 12	
<i>Live force and dead force</i> 16	
<i>The motive force of fire</i> 23	
<i>The Laplacian Dream</i> 26	
<i>Some mathematics of conservation principles</i> 30	
<i>The “discovery” of the conservation of energy</i> 35	
<i>What was discovered?</i> 50	
<i>The energetics movement</i> 53	
<i>Entropy: More heat than light</i> 59	
<i>The awakening from the Laplacian Dream</i> 66	
<i>The theory of relativity</i> 77	
<i>Quantum mechanics</i> 82	
<i>Who’s afraid of the nonconservation of energy?</i> 90	
3 Body, motion, and value	99
<i>The discovery of energy conservation réchauffé</i> 101	
<i>Measurement, mammon, momentum, and man</i> 108	
<i>Darwinian evolution as metaphor</i> 117	
<i>Lineamentrics from Stevin to Whewell</i> 119	
<i>Energy as metaphoric synthesis</i> 127	
<i>Physics off the gold standard</i> 132	
4 Science and substance theories of value in political economy to 1870	139
<i>The metaphor of value</i> 140	
<i>Aristotle discovers the economy</i> 144	
<i>Two kinds of mercantilism</i> 147	

- Physiocracy: More wheat than Zeit* 154    *Smith and Say: Cartesian crossroads* 163    *Ricardian vices* 171  
*Karl Marx and the swan song of substance theories of value* 174    *The watershed* 185    *Entr'acte* 191
- 5 Neoclassical economic theory: An irresistible field of force meets an immovable object 193  
*Classical political economy: Paradoxes of motion* 197  
*Precursors without energy: Canard, Bentham, Cournot* 202    *Hermann Gossen and the transition to neoclassical economics* 210    *The marginalist revolution of the 1870s* 217    *The canonical neoclassical model* 222    *Some consequences of a field theory of value* 231    *The sciences were never at war?* 241  
*Walras, Jevons, Menger* 254    *Marshall: More discreet than right* 262    *Neoclassical economics as a species of energetics* 265    *The syndetic stage?* 270    *The imperatives of proto-energetics* 271
- 6 The corruption of the field metaphor, and the retrogression to substance theories of value: Neoclassical production theory 276  
*A dybbuk named production* 280    *Putting square pegs in round holes: Flirting with the conservation of matter* 286  
*Getting more and more out of less and less: The neoclassical production metaphors* 293    *The spurious symmetry of neoclassical theories of production and consumption* 310  
*The myth of the engineering production function* 327  
*Abandoning the field* 332    *Every man his own capital theorist* 334    *Has there been any progress in the theory of value in the 20th century?* 350
- 7 The ironies of physics envy 354  
*Is economics a science?* 356    *Rediscovering the field: Integrability and revealed preference* 358    *The integrability problem and the misunderstood conservation principles* 369    *The age of technique* 372    *Paul Samuelson, scientist* 378    *Why did neoclassical economics cease to seriously emulate modern physical theory?* 386    *Reprise: The underworld of social physics* 394
- 8 Universal history is the story of different intonations given to a handful of metaphors 396

Appendix	The mathematics of the Lagrangian and Hamiltonian formalisms	402
