Preface

PROLOGUE Methodology vs Applied Methodology 1

- 1 Model building in modern economics
- 2 Methodology as a study of model-building methods
- 3 Applied methodology as a research programme

PART I Applications of the Popper-Samuelson Demarcation

- 1 Economic understanding and understanding economics 17
 - 1 The role of models in economics
 - 2 On the foundations of economic ignorance: axiomatics
 - 3 Beyond axiomatics
 - 4 Testability for all
- 2 On the methodology of economic model building 39
 - 1 Economic theories and the aim of science
 - 2 Popper's famous demarcation criterion
 - 3 Popper's subclass relations and the comparison of theories
 - 4 Testability and Popper's dimension of a theory
- 3 Implementing the Popper-Samuelson demarcation in economics 64
 - 1 Calculating the Popper-dimension of explicit models
 - 2 Examples of the P-dimension in economic models
 - 3 The identification problem and the P-dimension
 - 4 Concluding remarks about the P-dimension

PART II Popper-Samuelson Demarcation vs the Truth Status of Models

- 4 Conventionalism and economic theory: methodological controversy in the 1960s 87
 - 1 Robinsonian conventionalism
 - 2 Pareto optimality
 - 3 Welfare implications of imperfect competition
 - 4 The conventionalist controversy
 - 5 Limitations of approximating *laissez-faire*
 - 6 Second-best theory vs approximationism
 - 7 The simplicity-generality trade-off
 - 8 Concluding remarks on Robinsonian conventionalism

Contents

5	Methodology as an exercise in economic analysis	99
	1 Conventionalist methodology	
	2 Choice in welfare economics	
	3 Conventionalist methodological criteria	
	4 Choice theory in conventionalist methodology	
	5 The failures of welfare theory	
	6 The failures of conventionalist methodology	
PART III Exploring the Limits of the Popper-Samuelson Demarcation		
6	Uninformative mathematical economic models	119
	1 A simple Walrasian general equilibrium model	
	2 Methodological requirements of explanatory models	
	3 Methodological requirements of informative models	
	4 The methodological dilemma at issue	
	5 The Super Correspondence Principle	
	6 Falsifiability to the rescue	
7	On the impossibility of testability in modern economics	129
	1 Tautology vs testability	
	2 Test criteria as conventions	
	3 The role of logic in testing	
	4 The role of models in testing theories	
	5 The falsification of theories using models	
	6 The 'bad news'	
8	Model specifications, stochasticism and convincing tests in economics	141
	1 Falsifiability lives in modern economics	
	2 Overcoming Ambiguity of Direct Model Refutations	
	3 Stochasticism and econometric models	
	4 Asymmetries in tests based on stochastic models	
	5 'Normative' vs 'positive' methodology	
EPILOGUE Methodology after Samuelson: Lessons for Methodologists		
		167
	1 The interdependence of sociology and rhetoric	
	2 History and reality	
	3 Lessons for would-be methodologists	
	Bibliography	179
	Names Index	189
	Subject Index	191
