

Contents

<i>Chapter 1</i>	<i>Introduction to Modeling and Decision Analysis</i>	<i>1</i>
	The Modeling Approach to Decision Making	3
	Characteristics and Benefits of Modeling	3
	Mathematical Models	5
	Categories of Mathematical Models	6
	The Problem-Solving Process	8
	Good Decisions vs. Good Outcomes	10
<i>Chapter 2</i>	<i>Introduction to Optimization and Linear Programming</i>	<i>16</i>
	Applications of Mathematical Optimization	16
	Characteristics of Optimization Problems	17
	Expressing Optimization Problems Mathematically	18
	Mathematical Programming Techniques	19
	An Example LP Problem	20
	Formulating LP Models	20
	Summary of the LP Model for the Example Problem	22
	The General Form of an LP Model	23
	Solving LP Problems: An Intuitive Approach	23
	Solving LP Problems: A Graphical Approach	24
	Special Conditions in LP Models	33
<i>Chapter 3</i>	<i>Modeling and Solving LP Problems in a Spreadsheet</i>	<i>43</i>
	Spreadsheet Solvers	43
	Solving LP Problems in a Spreadsheet	44
	The Steps in Implementing an LP Model in a Spreadsheet	45
	A Spreadsheet Model for the Blue Ridge Hot Tubs Problem	46
	How Solver Views the Model	49
	Using Solver	51
	Goals and Guidelines for Spreadsheet Design	58
	Make vs. Buy Decisions	59
	An Investment Problem	65
	An Employee Scheduling Problem	69
	A Transportation Problem	77
	A Blending Problem	84
	A Production and Inventory Planning Problem	91
	A Multi-Period Cash Flow Problem	97
<i>Chapter 4</i>	<i>Sensitivity Analysis and the Simplex Method</i>	<i>128</i>
	The Purpose of Sensitivity Analysis	128
	Approaches to Sensitivity Analysis	129
	An Example Problem	129
	The Answer Report	130
	The Sensitivity Report	132

The Limits Report	143
The Simplex Method (Optional)	144
<i>Chapter 5 Network Modeling</i>	<i>159</i>
The Transshipment Problem	159
The Shortest Path Problem	167
The Equipment Replacement Problem	172
Transportation/Assignment Problems	175
Generalized Network Flow Problems	176
Maximal Flow Problems	182
Minimal Spanning Tree Problems	186
<i>Chapter 6 Integer Linear Programming</i>	<i>206</i>
Integrality Conditions	206
Relaxation	207
Solving the Relaxed Problem	208
Bounds	210
Rounding	211
Stopping Rules	213
Solving ILP Problems Using Solver	214
Other ILP Problems	217
Binary Variables	218
A Capital Budgeting Problem	219
Binary Variables and Logical Conditions	224
The Fixed-Charge Problem	225
Minimum Order/Purchase Size	232
Quantity Discounts	233
A Contract Award Problem	234
The Branch-and-Bound Algorithm (Optional)	241
<i>Chapter 7 Goal Programming and Multiple Objective Optimization</i>	<i>264</i>
Goal Programming	264
A Goal Programming Example	265
Comments About Goal Programming	274
Multiple Objective Optimization	276
An MOLP Example	276
Comments on MOLP	287
<i>Chapter 8 Nonlinear Programming</i>	<i>300</i>
The Nature of NLP Problems	300
Solution Strategies for NLP Problems	302
Local vs. Global Solutions	303
Economic Order Quantity Models	305
Location Problems	311
Nonlinear Network Flow Problem	317
Project Selection Problems	322
Optimizing Existing Financial Spreadsheet Models	328
The Portfolio Selection Problem	333
Sensitivity Analysis	342
Solver Options for Solving NLPs	345
<i>Chapter 9 Regression Analysis</i>	<i>361</i>
An Example	361
Regression Models	363
Simple Linear Regression Analysis	365
Defining “Best Fit”	365
Solving the Problem Using Solver	366

	Solving the Problem Using the Regression Tool	369
	Evaluating the Fit	370
	The R^2 Statistic	373
	Making Predictions	375
	Statistical Tests for Population Parameters	379
	Introduction to Multiple Regression	383
	A Multiple Regression Example	384
	Selecting the Model	386
	Making Predictions	392
	Binary Independent Variables	393
	Statistical Tests for the Population Parameters	394
	Polynomial Regression	394
<i>Chapter 10</i>	<i>Discriminant Analysis</i>	<i>409</i>
	The Two-Group DA Problem	410
	The k -Group DA Problem	420
<i>Chapter 11</i>	<i>Time Series Analysis</i>	<i>435</i>
	Time Series Methods	436
	Measuring Accuracy	436
	Extrapolation Models	436
	Moving Averages	438
	Weighted Moving Averages	441
	Exponential Smoothing	443
	Trend Models	447
	Holt's Method	448
	Modeling Time Series Trends Using Regression	452
	Linear Trend Model	452
	Quadratic Trend Model	455
	Seasonality	458
	Adjusting Trend Predictions with Seasonal Indices	458
	Winter's Method	461
	Seasonal Regression Models	467
	Combining Forecasts	470
<i>Chapter 12</i>	<i>Simulation</i>	<i>484</i>
	Random Variables and Risk	484
	Why Analyze Risk?	485
	Methods of Risk Analysis	485
	A Corporate Health Insurance Example	488
	Random Number Generators	490
	Preparing the Model for Simulation	496
	Replicating the Model	499
	Data Analysis	503
	The Uncertainty of Sampling	507
	The Benefits of Simulation	510
	Additional Uses of Simulation	511
	An Inventory Control Example	511
	An Overbooking Example	520
<i>Chapter 13</i>	<i>Simulation Using @Risk</i>	<i>542</i>
	Random Variables and Risk	542
	Why Analyze Risk?	543
	Methods of Risk Analysis	544
	Corporate Health Insurance Example	546
	Spreadsheet Simulation Using @Risk	548
	Random Number Generators	549

Preparing the Model for Simulation	552
Running the Simulation	555
Data Analysis	557
Incorporating Graphs and Statistics into a Spreadsheet	561
The Uncertainty of Sampling	563
The Benefits of Simulation	566
Additional Uses of Simulation	566
An Inventory Control Example	566
An Overbooking Example	573

Chapter 14 Queuing Theory 594

The Purpose of Queuing Models	594
Queuing System Configurations	595
Characteristics of Queuing Systems	596
Kendall Notation	600
Queuing Models	601
The M/M/s Model	601
The M/M/s Model with Finite Queue Length	605
The M/M/s Model with Finite Population	608
The M/G/1 Model	612
The M/D/1 Model	615
Simulating Queues	616
The Steady-State Assumption	617

Chapter 15 Project Management 624

An Example	625
Creating the Project Network	625
CPM: An Overview	628
The Forward Pass	629
The Backward Pass	631
Determining the Critical Path	633
Project Management Using Spreadsheets	635
Determining Earliest and Latest Start Times Using LP	638
Project Crashing	645
Certainty vs. Uncertainty	654
PERT: An Overview	654
Simulating Project Networks	657

Chapter 16 Decision Analysis 674

Good Decisions vs. Good Outcomes	671
Characteristics of Decision Problems	671
An Example	672
The Payoff Matrix	672
Decision Rules	675
Nonprobabilistic Methods	675
Probabilistic Methods	680
The Expected Value of Perfect Information	682
Decision Trees	685
Using TreePlan	687
Multistage Decision Problems	697
Analyzing Risk in a Decision Tree	700
Using Sample Information in Decision Making	702
Computing Conditional Probabilities	705
Utility Theory	708
Multicriteria Decision Making	715
The Multicriteria Scoring Model	716
The Analytic Hierarchy Process	717
