Acknowledgements	ix
Introduction	xi
SECTION 1 DEPRECIATION	
Sequential Models in Probabilistic Depreciation <i>Yuji Ijiri and Robert S. Kaplan</i>	3
Probabilistic Depreciation with a Varying Salvage Value <i>Ronald A. Friberg</i>	19
SECTION 2 AUDITING	
A Model for Integrating Sampling Objectives in Auditing <i>Yuji Ijiri and Robert S. Kaplan</i>	41
Statistical vs Judgement Sampling: An Empirical Study of Auditing the Accounts Receivable of a Small Retail Store <i>Hamdi F. Aly and Jack I. Duboff</i>	59
Additional references	75
SECTION 3 CORPORATE INCOME	
Income Determination Under Uncertainty: An Application of Markov Chains <i>John K. Shank</i>	81
Some Time Series Properties of Accounting Income <i>Ray Ball and Ross Watts</i>	109
SECTION 4 WORKING CAPITAL	
A Risk-Return Analysis of a Firm's Working Capital Position <i>James C. Van Horne</i>	141

## SECTION 5 CAPITAL BUDGETING

The Takeover in the Context of a Capital Budgeting Framework <i>Adrian Buckley</i>	163
---	-----

Additional References	180
-----------------------	-----

## SECTION 6 ESTIMATION

Problems of Estimation in Accounting <i>John P. Dickinson</i>	189
--	-----

## SECTION 7 BUSINESS FAILURE

A Quantitative Measure of the Risk Factor in Investment Decisions <i>T.M. Hammonds and D.I. Padberg</i>	207
--	-----

Ruin Considerations and Debt Issuance <i>Harold Bierman, Jr, and L. Joseph Thomas</i>	221
--	-----

### List of figures

1.1	Small sample distribution plot	24
1.2	Assessing a cumulative probability distribution	25
1.3	Assessing an approximate discrete distribution from a continuous cumulative distribution	26
1.4	Standardised beta distribution	27
1.5	Salvage value as a function of time	29
1.6	Families of curves	30
1.7	Beta curve area chart	34
2.1	Positive and negative confirmations as a percentage of the total	67
5.1	Indifference curves representing company's risk–return trade-off	164
5.2	Probability distribution of possible outcomes for acquisition	166
5.3	Possible portfolios represented in terms of NPV and standard deviation	167
6.1	Linear cost functions associated with two products or processes	197

7.1	Expected attrition rates in the dairy production and citrus packing industries	209
7.2	Expected attrition rates in the poultry processing and retail food chain industries	210
7.3	Expected yearly attrition of large dairy farms	213

#### List of tables

1.1	Sequential depreciation calculations over time	20
1.2	Conditional probability distributions of salvage value	22
1.3	Sequential depreciation calculations over time with a varying salvage value	23
2.1	Dollar ranges and number of accounts receivable in the Peoria firm	62
2.2	Size of statistical samples in auditing the accounts receivable of the Peoria firm	65
2.3	A summary of respondents' judgement sample selection of accounts to be confirmed	66
2.4	Testing the statistical significance of the size differences between judgement and statistical sampling in confirming the accounts receivable of the Peoria firm	68
2.5	Total estimated accounts receivable by respondents' judgement samples	70
2.6	Statistical sampling by stratum. Total estimated accounts receivable	71
2.7	Test of the significance of the differences between sample means of judgement and statistical samples for five strata	72
3.1	Estimated transition matrix	86
3.2	Cost differential matrix	92
3.3	The matrix $(I-DQ)^{-1}$	95
3.4	Test firm data for illustrating the stochastic model	97
3.5	A comparison of earnings calculations	98

3.6	Estimated in-process product costs	99
3.7	Time series of income averaged over 451 <i>Compustat</i> firms	115
3.8	Runs in signs of income changes	116
3.9	Distribution of serial correlation coefficients, net income changes	118
3.10	Distribution of serial correlation coefficients, net income changes	119
3.11	Ratio of MSSD to estimated variance (standardised)	122
3.12	Sub-models ranked first for each variable on the basis of minimum sum of overall ranks over $N$ firms	124
3.13	Sub-models ranked first in each class for each variable on the basis of minimum sum of ranks within each class	125
3.14	Sub-models ranked first for each simulated process on the basis of minimum sum of overall ranks for $N$ simulated firms	126
3.15	Sub-models ranked first in each class for each simulated process on the basis of minimum sum of ranks within each class	126
3.16	Rank order correlation coefficients between the rankings of the four variables and the rankings of four simulated processes based on minimum sum of overall ranks	127
4.1	Possible liquid-asset balances without additional financing	144
4.2	Liquid-asset balance with new financing of \$400,000	149
4.3	Schedule of alternatives for reducing risk of running out of cash	151
4.4	Probabilities of running out of cash for various alternatives	153
5.1	Incremental earnings per share gains resulting from acquisition by P Ltd of Q Ltd and R Ltd discounted to present value	175
6.1	Price data for different outlets and different times	191
6.2	Derivation of jack-knife estimates	195
6.3	Cost data for two products/processes	199
7.1	Distribution parameters for selected industries	209
7.2	Investment data for selected industries	215
