Preface xi

1 Preliminaries 1

- 1.1 Counting Outcomes 2
- 1.2 Set Algebra 8
- 1.3 Events 14
- 1.4 Functions on a Sample Space 15

2 Probability 19

- 2.1 Experiments with Symmetries 19
- 2.2 The Law of Large Numbers 21
- 2.3 Subjective Probability 24
- 2.4 Probability Axioms 27
- 2.5 Discrete Probability Spaces 30
- 2.6 Densities 31
- 2.7 Conditional Probability 33
- 2.8 Bayes' Theorem 37

3 Random Variables 43

- 3.1 Discrete Random Variables 43
- 3.2 Distribution Functions 47

3.3 Continuous Random Variables	54
3.4 Continuous Random Vectors	58
3.5 Functions of Random Variables	63
3.6 Conditional Distributions	69
3.7 Independence	77
3.8 Exchangeable Variables	85

4 Expectations **89**

4.1 Discrete Random Variables	90
4.2 Continuous Random Variables	93
4.3 Functions of Random Variables	99
4.4 Moments	104
4.5 Variance	105
4.6 Chebyshev and Related Inequalities	110
4.7 Covariance	113
4.8 Correlation	116
4.9 Generating Functions	120
4.10 Characteristic Functions	128
4.11 Multivariate Generating Functions	131

5 Limit Theorems **135**

5.1 Convergence	135
5.2 Law of Large Numbers	137
5.3 The Central Limit Theorem	139

6 Some Parametric Families **143**

6.1 Bernoulli Trials	143
6.2 The Binomial Distribution	145
6.3 Hypergeometric Distributions	150

6.4	Negative Binomial Distributions	154
6.5	The Poisson Process	160
6.6	Exponential and Related Distributions	166
6.7	Gamma and Beta Distributions	172
6.8	Normal Distributions	178
6.9	Chi-square Distributions	182
6.10	Multinomial Distributions	186
6.11	Exponential Families	188
6.12	The Cauchy Family	190

7 Sampling and Reduction of Data **195**

7.1	Random Sampling	195
7.2	Describing Samples	198
7.3	Sampling Distributions	206
7.4	Sampling Distributions of Sample Moments	208
7.5	Sampling Normal Populations	211
7.6	Sampling Distributions of Order Statistics	215
7.7	Likelihood	220
7.8	Sufficiency	228
7.9	Minimal Sufficiency	235
7.10	Information in a Sample	240
7.11	Prior to Posterior	246
7.12	Principles of Inference	250

8 Estimation **253**

8.1	Mean Squared Error	254
8.2	Efficiency	260
8.3	Using Sufficiency for Variance Reduction	265
8.4	Consistency	270

8.5 Method of Moments 272
8.6 Maximum Likelihood Estimators 274
8.7 Bayes Estimators 279
8.8 Interval Estimates 281
8.9 Estimating Normal Population Parameters 285

9 Testing Hypotheses **291**

9.1 Some Generalities 292
9.2 The Likelihood Ratio 296
9.3 Tests: Assessing Evidence 300
9.4 Tests: Decision Rules 307
9.5 Bayesian Testing 313
9.6 Normal Populations—the Variance 317
9.7 Normal Populations—the Mean 322
9.8 Simple H_0 vs. Simple H_A 329
9.9 The Neyman-Pearson Lemma 334
9.10 The Power Function 340
9.11 Power Functions of t -tests 346
9.12 Uniformly Most Powerful Tests 350

10 Analysis of Categorical Data **357**

10.1 The Bernoulli Model 357
10.2 Pearson's Chi-square for Goodness of Fit 361
10.3 Likelihood Ratio for Goodness of Fit 366
10.4 Two-way Contingency Tables 369
10.5 Independence and Homogeneity 371
10.6 Large- and Small-sample Tests 376
10.7 Measures of Association 380
10.8 McNemar's Test 381

10.9	Log-linear Models for 2×2 Tables	385
10.10	Three-way Classifications	386
11	Sequential Analysis	395
11.1	The Sequential Likelihood Ratio Test	395
11.2	Expected Sample Size	402
11.3	Power of the SLRT	404
12	Multivariate Distributions	409
12.1	Transformations	409
12.2	The Bivariate Normal Distribution	417
12.3	Correlation and Prediction	424
12.4	Multivariate Transformations	429
12.5	The General Linear Transformation	432
12.6	Multivariate Normal Distributions	435
12.7	A Decomposition Theorem	440
13	Nonparametric Tests	445
13.1	Distribution of the Order Statistic	446
13.2	The Transformation $F(X)$	449
13.3	Testing Randomness	452
13.4	The Sign Test	459
13.5	The Signed-rank Test	461
13.6	Asymptotic Relative Efficiency	465
13.7	Confidence Intervals	467
13.8	Two-sample Tests	470
13.9	Goodness of Fit	479

14 Linear Models and Analysis of Variance 489

- 14.1 The Likelihood Function 491
- 14.2 Simple Linear Regression—Estimation 493
- 14.3 Simple Linear Regression—Testing and Prediction 501
- 14.4 Testing Linearity 505
- 14.5 Multiple Regression 508
- 14.6 Nested Models 512
- 14.7 A Single Classification Model 517
- 14.8 A Random Effects Model 524
- 14.9 Two-way Classifications 527
- 14.10 Other Designs 535

15 Decision Theory 539

- 15.1 Convex Sets 539
- 15.2 Utility and Subjective Probability 542
- 15.3 Loss, Regret, and Mixed Actions 547
- 15.4 Minimax Actions 549
- 15.5 Bayes Actions 554
- 15.6 Admissibility 558
- 15.7 The Risk Function 560
- 15.8 Using the Posterior 565
- 15.9 Randomized Decision Rules 568
- 15.10 Monotone Problems and Procedures 570

Tables 575
