

Contents

Chapter 1	Introduction	1
1.1.	The Search Process	2
1.2.	The Nonexperimental Model-building Restriction	3
1.3.	Objectives of the Book	4
1.4.	Organization of the Book	5
1.5.	Econometric Thought	6
1.6.	References	6
 PART ONE SAMPLING THEORY AND BAYESIAN APPROACHES TO INFERENCE		 9
Chapter 2	The Classical Inference Approach for the General Linear Model	11
2.1.	Classical Inference for the Traditional Linear Statistical Model	11
2.1.1.	The Least Squares Rule	13
2.1.1a.	Sampling Properties of the Least Squares Estimator	14
2.1.1b.	An Estimator of σ^2	15
2.1.2.	The Maximum Likelihood Rule	16
2.1.2a.	Sampling Properties	17
2.1.2b.	Cramér-Rao Inequality	19
2.1.3.	Interval Estimation and Hypothesis Testing	20
2.1.3a.	Interval Estimation	21
2.1.3b.	Hypothesis Testing	22
2.1.4.	The Orthonormal Model	24
2.2.	Nonscalar Identity Error Covariance Matrix	25
2.2.1.	Error Related Sets of Equations	28
2.3.	Goodness of Fit Measures	29
2.3.1.	A Single Equation with Nonscalar Covariance Matrix	31
2.4.	Summary	33
2.5.	Exercises	35
2.5.1.	Sampling Experiment One	35
2.5.1a.	Individual Exercises	36
2.5.1b.	Group Exercises	37
2.5.2.	Sampling Experiment Two	38
2.5.2a.	Individual Exercises	38
2.5.2b.	Group Exercises	39
2.6.	References	39

Chapter 3	Statistical Decision Theory and Biased Estimation	41
3.1.	Statistical Decision Theory	42
3.1.1.	Basic Concepts	43
3.1.2.	The Choice of a Decision Rule	44
3.1.3.	The Measure Space	46
	3.1.3a. Squared Error Loss	46
	3.1.3b. Generalized Mean Squared Error	47
3.1.4.	Some Examples	48
3.2.	Estimators that Combine Sample and Nonsample Information	51
3.2.1.	Exact Nonsample Information	52
	3.2.1a. Performance Under Squared Error Loss	54
	3.2.1b. Performance Under the General Mean Squared Error Criterion	55
	3.2.1c. General Linear Hypotheses	57
3.2.2.	Stochastic Nonsample Information	57
	3.2.2a. The Estimator	58
	3.2.2b. Sampling Comparisons	59
	3.2.2c. Stochastic Linear Hypotheses	61
3.2.3.	Inequality-Restricted Nonsample Information	62
	3.2.3a. The Inequality-Restricted Estimator	62
	3.2.3b. A Framework for Evaluating the Sampling Properties	64
	3.2.3c. The Mean and Risk of the Inequality-Restricted Estimator	66
	3.2.3d. Hypothesis Testing	69
3.3.	Pretest Estimators	72
3.3.1.	The Conventional Pretest Estimator	72
	3.3.1a. Sampling Performance	74
	3.3.1b. Mean Squared Error Norm	76
	3.3.1c. The Optimal Level of Significance	77
3.3.2.	Inequality Pretest Estimator	78
	3.3.2a. Mean of the Inequality Pretest Estimator	78
	3.3.2b. Risk of the Inequality Pretest Estimator	80
	3.3.2c. Pretest Estimator Comparisons	81
	3.3.2d. Summary Remarks	81
3.4.	Stein Rules	82
3.4.1.	The James and Stein Rule	82
3.4.2.	A Reformulated Rule	84
3.4.3.	A Positive Stein Rule	85
3.4.4.	A Stein-like Pretest Estimator	86
3.4.5.	Stein-like Inequality Estimators	87
3.4.6.	Some Remarks	89
3.5.	Summary	90
3.6.	Exercises	92
3.7.	References	94

Chapter 4	The Bayesian Approach to Inference	97
4.1.	Bayesian Inference and Bayes' Theorem	97
4.2.	Analysis with a Noninformative Prior	101
4.2.1.	Specification of the Noninformative Prior	101
4.2.2.	Posterior Density Functions from a Noninformative Prior	103
4.3.	Analysis with Informative Priors	105
4.3.1.	Specification of a Natural Conjugate Prior	106
4.3.2.	Posterior Density Functions from a Natural Conjugate Prior	108
4.3.3.	Recursive Updating Formulae	110
4.3.4.	The g -Prior Distribution	110
4.3.5.	An Independent t -Gamma Prior	111
4.3.6.	Assessment of Informative Priors	112
4.4.	Point Estimation	113
4.4.1.	Sampling Theory Properties of Bayesian Estimators	114
4.4.2.	Point Estimates for Reciprocals and Ratios of Regression Coefficients	116
4.4.3.	Bayesian Interpretations of Some Sampling Theory Estimators	117
4.4.3a.	Ridge Regression	117
4.4.3b.	Bayesian Pretest Estimators and the Stein Rule	117
4.4.4.	Some Concluding Remarks on Point Estimation	121
4.5.	Prediction	122
4.6.	Interval Estimation	123
4.6.1.	Hypothesis Testing Using HPD Intervals	125
4.7.	Posterior Odds and Hypothesis Testing	125
4.7.1.	Posterior Odds from Natural Conjugate Priors	128
4.7.2.	Posterior Odds from Other Prior Densities	131
4.8.	Summary	132
4.9.	Exercises	133
4.10.	References	136

**PART TWO INFERENCE IN
GENERAL STATISTICAL
MODELS AND TIME SERIES 141**

Chapter 5	Some Asymptotic Theory and Other General Results for the Linear Statistical Model	143
5.1.	Consistency of Least Squares	144
5.1.1.	The Convergence of $X'X/T$	145
5.1.2.	The Order of Magnitude of a Sequence	145

5.1.3.	Convergence in Probability and Almost Sure Convergence	147
5.1.4.	Order in Probability	148
5.1.5.	Consistency	149
5.1.6.	Convergence in Quadratic Mean	151
5.2.	Finite Sample Properties of Least Squares with Nonnormal Errors	152
5.3.	The Asymptotic Distribution of the Least Squares Estimator	153
5.3.1.	Convergence in Distribution	153
5.3.2.	Central Limit Theorems	156
5.3.3.	The Least Squares Estimator and Related Statistics	157
5.3.4.	Nonlinear Functions of the Least Squares Estimator	159
5.3.5.	Asymptotically Uncooperative Regressors	161
5.3.6.	Other Approximation Methods and Some Terminology	163
5.4.	Stochastic Regressors	163
5.4.1.	Independent Stochastic Regressors	164
5.4.2.	Partially Independent Stochastic Regressors	166
5.4.3.	General Stochastic Regressor Models and Instrumental Variable Estimation	167
5.5.	Estimation with an Unknown Disturbance Covariance Matrix	169
5.5.1.	Least Squares Estimation	170
5.5.2.	Least Squares, BLUS, and Recursive Residuals	171
5.5.2a.	BLUS Residuals	172
5.5.2b.	Recursive Residuals	173
5.5.3.	Estimated Generalized Least Squares	174
5.5.3a.	Properties of Estimated Generalized Least Squares Estimators	175
5.6.	Maximum Likelihood Estimation	177
5.6.1.	Properties of Maximum Likelihood Estimators	177
5.6.2.	Linear Models with Unknown Disturbance Covariance Matrix	180
5.7.	The Wald, Likelihood Ratio, and Lagrange Multiplier Tests	182
5.7.1.	Testing a Set of Linear Restrictions on β	184
5.8.	Summary of Some Asymptotic Theory Results	187
5.9.	Exercises	190
5.10.	References	191
Chapter 6	Nonlinear Statistical Models	195
6.1.	Introduction	195
6.2.	Estimation	196
6.2.1.	Least Squares Estimation	196
6.2.1a.	Consistency	198

6.2.1b.	The Asymptotic Distribution of \mathbf{b}	199
6.2.1c.	Comments on the Assumptions for Consistency and Asymptotic Normality	200
6.2.1d.	Approximating the Functional Form	201
6.2.2.	Maximum Likelihood Estimation	201
6.3.	Computation of Parameter Estimates	203
6.4.	Estimation Under Constraints	205
6.4.1.	Equality Constraints	205
6.4.2.	Inequality Constraints	207
6.5.	Confidence Regions	209
6.5.1.	Confidence Intervals	209
6.5.2.	Joint Confidence Regions	211
6.6.	Testing Hypotheses	213
6.6.1.	Tests for Location	214
6.6.2.	Testing General Nonlinear Hypotheses	215
6.6.2a.	Wald Test	215
6.6.2b.	Lagrange Multiplier Test	216
6.6.2c.	Likelihood Ratio Test	216
6.6.3.	Some Comments on Testing Hypotheses	217
6.7.	Summary	217
6.8.	Exercises	219
6.8.1.	Individual Exercises	219
6.8.2.	Joint or Class Exercises	219
6.9.	References	221
Chapter 7	Time Series	224
7.1.	Introduction	224
7.2.	Stochastic Processes	224
7.2.1.	Autoregressive Processes	227
7.2.2.	Moving Average Processes	229
7.2.3.	ARMA and ARIMA Processes	232
7.2.4.	Seasonal ARIMA Processes	233
7.2.5.	Nonlinear and Nonstationary Processes	233
7.3.	Forecasting ARIMA Processes	234
7.4.	Estimation of ARMA Processes	237
7.5.	Specification of ARIMA Processes	240
7.5.1.	The Box-Jenkins Approach	240
7.5.2.	AR Order Selection	241
7.5.2a.	Sequential Testing	242
7.5.2b.	FPE	243
7.5.2c.	AIC	244
7.5.2d.	SC	245
7.5.2e.	CAT	246
7.5.2f.	Consistent Order Estimation	246
7.5.2g.	Asymptotically Efficient Order Selection	247
7.6.	Frequency Domain Analysis	247
7.6.1.	The Spectrum of a Stochastic Process	248

7.6.2.	Estimation of the Spectrum	255
7.6.3.	Some Literature on Spectral Analysis	257
7.7.	Data Transformations and Adjustments	257
7.7.1.	The Box-Cox Transformation	257
7.7.2.	Trend and Seasonal Component	258
7.7.2a.	Some Desirable Properties of Seasonal Adjustment Procedures	259
7.7.2b.	Seasonal and Trend Adjustment Procedures	260
7.7.2c.	Some Comments on Seasonal Adjustment	261
7.8.	Summary	262
7.9.	Exercises	263
7.9.1.	Individual Exercises	264
7.9.2.	Class Exercises	264
7.10.	References	265
 PART THREE DYNAMIC SPECIFICATIONS		 273
 Chapter 8 Autocorrelation		 275
8.1.	Existence of Autocorrelation and the Use of Least Squares	275
8.1.1.	LS Estimation Under Autocorrelation	278
8.1.1a.	Efficiency	278
8.1.1b.	Bias in Variance Estimation	281
8.2.	Estimation Under Alternative Autocorrelation Specifications	283
8.2.1.	Estimation with AR(1) Errors	284
8.2.1a.	GLS Estimation	285
8.2.1b.	EGLS Estimation	286
8.2.1c.	NLS Estimation	287
8.2.1d.	ML Estimation	289
8.2.1e.	Properties	290
8.2.1f.	Bayesian Estimation	291
8.2.2.	Estimation with AR(2) Errors	293
8.2.2a.	GLS Estimation	294
8.2.2b.	EGLS Estimation	295
8.2.2c.	NLS Estimation	296
8.2.2d.	ML Estimation	297
8.2.2e.	Properties	297
8.2.3.	Estimation with Higher-Order AR Errors	297
8.2.4.	A Particular AR(4) Process	298
8.2.5.	Estimation with MA(1) Errors	299
8.2.5a.	GLS, NLS, and ML Estimation	299
8.2.5b.	Approximations	301
8.2.5c.	Properties	302
8.2.5d.	Bayesian Estimation	304
8.2.6.	Estimation with Higher-Order MA Errors	305
8.2.6a.	NLS and ML Estimation	307
8.2.6b.	Properties	310

8.2.7.	Estimation with ARMA Errors	310
8.2.7a.	NLS and ML Estimation	311
8.2.7b.	Some Extensions	313
8.2.8.	Regression in the Frequency Domain	314
8.3.	Prediction in Models with Autocorrelated Errors	315
8.3.1.	AR Errors	316
8.3.2.	MA Errors	317
8.3.3.	Mean Square Error of Predictions	318
8.4.	Testing for the Existence and Type of Autocorrelation	319
8.4.1.	General Large-Sample Tests	319
8.4.1a.	Using Sample Autocorrelations	319
8.4.1b.	Wald, Likelihood Ratio, and Lagrange Multiplier Tests	320
8.4.1c.	Adequacy of Fit	321
8.4.1d.	Discriminating Between Dynamics and Autocorrelation	321
8.4.2.	Testing for AR(1) Errors	322
8.4.2a.	The Durbin-Watson Test	322
8.4.2b.	King's Locally Optimal Bounds Test and the Berenblut-Webb Test	324
8.4.2c.	Tests Based on a Transformation of LS Residuals	325
8.4.2d.	Testing for AR(1) Errors When X Contains a Lagged Dependent Variable	326
8.4.3.	Some Tests for Alternatives Other Than AR(1) Errors	327
8.4.3a.	Durbin's Test Based on the Periodogram of Residuals	327
8.4.3b.	Geary's Sign Change Test	327
8.4.3c.	Some Generalizations of the Durbin-Watson Statistic	328
8.4.3d.	Testing for MA(1) Errors	328
8.4.3e.	Additional Remarks	329
8.4.3f.	Testing for General AR or MA Errors When X Contains a Lagged Dependent Variable	329
8.5.	Recommendations and Some Comments on Pretesting	330
8.6.	Exercises	332
8.6.1.	General Exercises	332
8.6.2.	Individual Exercises Using Monte Carlo Data	334
8.6.3.	Group Exercises Using Monte Carlo Data	336
8.7.	References	337
Chapter 9	Finite Distributed Lags	350
9.1.	Introduction	350
9.2.	Unconstrained Lags	351
9.2.1.	Estimation when the Lag Length Is Known	351
9.2.2.	Estimation of the Lag Length	353
9.2.3.	Some Problems	355

9.3.	The Almon Distributed Lag	356
9.3.1.	A Restricted Least Squares Formulation	357
9.3.2.	Effects of Misspecifying the Polynomial Degree and/or Lag Length	359
9.3.3.	Procedures for Estimating the Polynomial Degree When the True Lag Length Is Known	360
9.3.4.	Procedures for Estimating the Lag Length and Polynomial Degree When Both Are Unknown	363
9.4.	Polynomial Spline Distributed Lags	364
9.5.	Shiller's Distributed Lag	365
9.6.	The Harmonic Lag	366
9.7.	Estimation of the Moments of the Lag Distribution	367
9.8.	Summary	368
9.9.	Exercises	369
9.9.1.	Individual Exercises	369
9.9.2.	Joint or Class Exercises	370
9.10.	References	371
 Chapter 10 Infinite Distributed Lags		 374
10.1.	Introduction	374
10.1.1.	The General Model	374
10.1.2.	Some Special Cases	376
10.2.	Model Specification	377
10.2.1.	Theory-based Model Specification	377
10.2.1a.	Adaptive Expectations	379
10.2.1b.	Partial Adjustment	380
10.2.1c.	Optimal Adjustment	380
10.2.1d.	Maximum Entropy	381
10.2.2.	Data-based Model Specification	382
10.2.2a.	The Box-Jenkins Approach for Specifying Transfer Function Models	382
10.2.2b.	Approximating the Lag Structure	384
10.2.2c.	Common Factor Analysis	385
10.2.3.	Conclusions	386
10.3.	Estimation of Rational Distributed Lag Models with ARMA Errors	387
10.3.1.	Estimation of Geometric Lag Models	388
10.3.1a.	Exact Maximum Likelihood When the Disturbances Are Not Autocorrelated	388
10.3.1b.	Approximate Maximum Likelihood When the Disturbances Are Not Autocorrelated	389
10.3.1c.	Instrumental Variable Estimation	390
10.3.1d.	Autocorrelated Disturbances	391
10.3.2.	Discounted Polynomial Lags	394

10.3.3.	General Rational Lag Models with ARMA Errors	396
10.3.3a.	Time Domain Estimation	396
10.3.3b.	Spectral Methods	397
10.3.4.	Some Comments	398
10.4.	Model Checking	399
10.5.	Alternative Distributed Lag Models	401
10.5.1.	Gamma Distributed Lags	401
10.5.2.	Exponential Lags	403
10.5.3.	Some Further Remarks	404
10.6.	Problems Related to the Interpretation of the Lag Weights	405
10.6.1.	Omitted Variables	405
10.6.2.	Aggregation Over Time	406
10.6.3.	Seasonality	406
10.7.	Summary and Conclusions	408
10.8.	Exercises	410
10.8.1.	Individual Exercises	410
10.8.2.	Joint or Class Exercises	411
10.9.	References	412

PART FOUR SOME ALTERNATIVE COVARIANCE STRUCTURES

Chapter 11	Heteroscedasticity	419
11.1.	Existence of Heteroscedasticity and the Use of LS and GLS	419
11.2.	Estimation Under Alternative Heteroscedastic Specifications	422
11.2.1.	No Restrictions on the Variance of Each y_t	422
11.2.2.	Variances Constant Within Subgroups of Observations	428
11.2.2a.	Some Properties of a Preliminary-Test Estimator	430
11.2.3.	The Standard Deviation of y_t Is a Linear Function of Exogenous Variables	431
11.2.4.	The Variance of y_t Is a Linear Function of Exogenous Variables	434
11.2.4a.	A Special Case: The Hildreth-Houck Random Coefficient Model	
11.2.5.	The Variance of y_t Is Proportional to a Power of Its Expectation	437
11.2.6.	The Log of the Variance of y_t Is a Linear Function of Exogenous Variables—Multiplicative Heteroscedasticity	439
11.2.7.	Autoregressive Conditional Heteroscedasticity	441

11.2.8.	Some Comments on Functional Form and Heteroscedasticity	444
11.3.	General Tests for Heteroscedasticity	445
11.3.1.	Breusch-Pagan Test	446
11.3.2.	Bartlett Test	447
11.3.3.	Goldfeld-Quandt Test	449
11.3.4.	Szroeter's Class of Tests	450
11.3.5.	White's Test	453
11.3.6.	Additional Nonparametric Tests	454
11.4.	Summary	454
11.5.	Exercises	456
11.5.1.	General Exercises	456
11.5.2.	Individual Exercises Using Monte Carlo Data	456
11.5.3.	Group Exercises Using Monte Carlo Data	459
11.6.	References	460
Chapter 12	Disturbance-related Sets of Regression Equations	465
12.1.	Sets of Equations with Contemporaneously Correlated Disturbances	466
12.1.1.	Estimation	467
12.1.1a.	Stein-Like Estimators	471
12.1.2.	Hypothesis Testing	472
12.1.2a.	Linear Restrictions on the Coefficient Vector	472
12.1.2b.	Testing for a Diagonal Covariance Matrix	476
12.1.3.	Goodness of Fit Measures	477
12.1.4.	Bayesian Estimation	478
12.1.5.	Extensions of the Model	480
12.2.	Sets of Equations with Unequal Numbers of Observations	480
12.3.	Sets of Equations with First-order Autoregressive Disturbances	483
12.3.1.	Estimation when R is Diagonal	485
12.3.2.	Estimation with Nondiagonal R	490
12.3.3.	Finite Sample Properties	493
12.3.4.	Hypothesis Testing	493
12.3.5.	Extensions of the AR(1) Error Model	496
12.4.	Recommendations	496
12.5.	Estimation with a Singular Disturbance Covariance Matrix	497
12.5.1.	Some Illustrations	497
12.5.2.	The Restricted Generalized Inverse Estimator	499
12.5.3.	Concluding Remarks	502

12.6. Exercises	503
12.6.1. General Exercises	503
12.6.2. Exercises Using Monte Carlo Data	504
12.6.2a. Individual Exercises	506
12.6.2b. Group or Class Exercises	508
12.7. References	508
Chapter 13 Inference in Models That Combine Time Series and Cross-sectional Data	515
13.1. Introduction	515
13.2. Models with All Coefficients Constant	518
13.3. Models with Constant Slope Coefficients and an Intercept That Varies Over Individuals	519
13.3.1. The Dummy Variable Model	519
13.3.2. The Error Components Model	521
13.3.2a. GLS Estimation	522
13.3.2b. Prediction of Random Components	524
13.3.2c. Estimation of Variance Components	525
13.3.2d. Testing the Specification	526
13.3.3. Fixed or Random Effects?	527
13.3.4. Extensions of the Model	529
13.4. Models with Constant Slope Coefficients and an Intercept That Vary Over Individuals and Time	530
13.4.1. The Dummy Variable Model	530
13.4.2. The Error Components Model	533
13.4.2a. GLS Estimation	534
13.4.2b. Predicting Random Components	535
13.4.2c. Estimation of Variance components	536
13.4.2d. Testing the Specifications	536
13.4.3. Fixed or Random Effects?	537
13.4.4. Extensions of the Model	538
13.5. Models with Slope Coefficients that Vary Over Individuals	538
13.5.1. The Swamy Random Coefficient Model	539
13.5.1a. GLS Estimation	539
13.5.1b. Predicting Random Components	541
13.5.1c. Estimating Variances	541
13.5.1d. Testing the Specification	542
13.5.1e. Extensions of the Model	543
13.5.2. Fixed or Random Coefficients?	544
13.6. Models with Slope Coefficients That Vary Over Time and Individuals	545
13.6.1. The Hsiao Random Coefficient Model	547
13.6.1a. Estimation and Prediction with Known Variances	548
13.6.1b. Estimating Variances	548

13.7. Recommendations	550
13.8. Exercises	551
13.8.1. General Exercises	551
13.8.2. Exercises Using Monte Carlo Data	552
13.8.2a. Individual Exercises	553
13.8.2b. Group Exercises	554
13.9. References	554
PART FIVE INFERENCE IN SIMULTANEOUS EQUATION MODELS	561
Chapter 14 Specification and Identification in Simultaneous Equation Models	563
14.1. Introduction	563
14.2. The Simultaneous Equations Statistical Model and Assumptions	564
14.3. Consequences of Ordinary Least Squares Estimation of Structural Equation Parameters	570
14.4. Reduced Form Equations and Their Estimation	571
14.5. Identification	573
14.5.1. Basics	574
14.5.2. Identification in the Linear Simultaneous Equations Model	574
14.5.2a. Identification of a Single Equation Using Linear Restrictions on Structural Parameters	576
14.5.2b. Identification of the System in Terms of "Linear Estimable Functions"	580
14.5.3. Identification of Systems That are Linear in The Parameters But Nonlinear in the Variables	582
14.5.4. General Methods of Identification	584
14.6. Summary	585
14.7. Exercises	586
14.8. References	588
Chapter 15 Estimation and Inference in a System of Simultaneous Equations	591
15.1. Introduction	591
15.2. Traditional Methods of Estimating Linear Structural Models	591
15.2.1. Single Equation or Limited Information Methods	595
15.2.1a. Indirect Least Squares	595
15.2.1b. A Generalized Least Squares Estimator	596

15.2.1c.	The Two-Stage Least Squares Estimator	597
15.2.1d.	The Limited Information Maximum Likelihood Estimator	598
15.2.2.	Systems or Full Information Methods	599
15.2.2a.	The Three-Stage Least Squares Estimator	599
15.2.2b.	The Full Information Maximum Likelihood Method	601
15.3.	General Classes of Estimators	602
15.3.1.	The k -Class and K -Matrix-Class Families	602
15.3.2.	A Family of Instrumental Variable Estimators	604
15.3.3.	An Estimator Generating Equation	606
15.4.	Small Sample Properties of Estimators	609
15.5.	Inference	613
15.5.1.	Tests of Parameter Significance	614
15.5.2.	Tests of Overidentification	614
15.5.3.	Misspecification Tests	616
15.6.	Efficient Estimation of Reduced Form Parameters	619
15.7.	Methods for Nonlinear Systems	622
15.7.1.	Single Equation Methods	623
15.7.2.	Systems Methods	626
15.8.	Bayesian Methods	631
15.8.1.	Single Equation Bayesian Analysis	631
15.8.2.	Full System Bayesian Analysis	633
15.8.3.	A Minimum Expected Loss Approach	635
15.9.	A Special System—Disequilibrium Models	638
15.10.	Summary	640
15.11.	Exercises	641
15.12.	References	646
Chapter 16	Multiple Time Series and Systems of Dynamic Simultaneous Equations	654
16.1.	Stationary Vector Stochastic Processes	656
16.1.1.	Vector ARMA Processes	656
16.1.2.	Forecasting Vector ARMA Processes	659
16.2.	Dynamic Simultaneous Equations Models	660
16.2.1.	Structural Form, Reduced Form, and Final Form	660
16.2.1a.	An Example	662
16.2.1b.	Identification of ARMAX Models	663
16.2.2.	Rational Expectations	664
16.2.3.	Exogeneity and Causality	667
16.3.	Aggregation of Vector ARMA Processes	669
16.3.1.	The Structure of Aggregated ARMA Processes	670
16.3.1a.	Contemporaneous Aggregation	670

16.3.1b.	Temporal and Contemporaneous Aggregation	671
16.3.2.	Forecasting Aggregated Vector ARMA Processes	673
16.4.	Interpretation of Multiple Time Series Models	675
16.4.1.	Omitted Variables	675
16.4.2.	Measurement Errors	676
16.4.3.	Seasonality	677
16.5.	Estimation of Vector ARMA Processes	678
16.5.1.	Time Domain Maximum Likelihood Estimation	679
16.5.2.	Special Cases	680
16.5.2a.	Vector Autoregressive Processes	680
16.5.2b.	AP Processes	681
16.5.3.	Spectral Estimation	682
16.5.4.	Some Problems	684
16.6.	Data-Based Specification of Vector ARMA Processes	685
16.6.1.	AR Processes	685
16.6.1a.	Estimating the Order of an Unconstrained Vector AR Process	686
16.6.1b.	Constrained Vector AR Models	688
16.6.2.	Modeling ARMA Processes	690
16.6.2a.	Granger-Newbold Procedure	690
16.6.2b.	Tiao and Box's Approach	691
16.6.3.	Model Checking	691
16.6.4.	A Comment on Data-based Modeling	692
16.7.	Summary	692
16.8.	Exercises	694
16.8.1.	Individual Exercises	694
16.8.2.	Class Exercises	695
16.9.	References	695
 PART SIX FURTHER MODEL EXTENSIONS		 703
Chapter 17 Unobservable Variables		705
17.1.	Unobservable Variables in Econometric Models	705
17.2.	Least Squares Consequences of Errors in Variables	706
17.3.	The Dilemma of Proxy Variables	709
17.4.	The Problem of Identification	711
17.5.	Single Equation Models	713
17.5.1.	Use of Information on the Errors in Variables	714
17.5.2.	Repeated Observations	715
17.6.	Multiple Equations	717
17.6.1.	Multiple Indicators	717
17.6.2.	Multiple Causes	719
17.6.3.	A Model with Multiple Indicators and Multiple Causes	725

17.6.4.	Causal Models and Path Analysis	726
17.6.5.	Instrumental Variables	728
17.7.	Simultaneous Equations Models	731
17.8.	Dynamic Models	732
17.9.	Summary	734
17.10.	Exercises	738
17.11.	References	743
 Chapter 18 Qualitative and Limited Dependent Variable Models		 752
18.1.	Introduction	752
18.2.	Binary Choice Models	753
18.2.1.	The Difficulties of Standard Regression Techniques for Binary Choice Models	756
18.2.1a.	Generalized Least Squares Estimation of the Linear Probability Model	757
18.2.1b.	Inequality Restricted Least Squares	759
18.2.2.	Transformation Approaches	761
18.2.2a.	The Transformation Approaches When Sufficient Repeated Observations Are Available	762
18.2.2b.	The Transformation Approaches When Few Repeated Observations Are Available	764
18.2.3.	Evaluation and Use of Binary Choice Models	766
18.3.	Multinomial Choice Models	768
18.3.1.	Multinomial Logit	770
18.3.2.	Multinomial Probit	772
18.3.3.	Evaluation of Multinomial Choice Models	773
18.3.4.	Summary and Concluding Remarks on Multinomial Choice Models	778
18.4.	Analysis of Censored and Truncated Samples	779
18.4.1.	Estimation in Censored and Truncated Samples	780
18.4.2.	Evaluation and Extensions Related to Limited Dependent Variable Models	783
18.5.	Simultaneous Equations Models with Discrete and Limited Endogenous Variables	785
18.5.1.	Two-Stage Methods and Amemiya's Principle	785
18.5.2.	Alternative Specifications of Simultaneous Equations Models with Limited Endogenous Variables	787
18.6.	Summary	788
18.7.	Exercises	790
18.7.1.	General Exercises	790
18.7.2.	Individual Monte Carlo Exercises	790
18.7.3.	Group Monte Carlo Exercises	791

18.8. References	791
Chapter 19 Varying and Random Coefficient Models	797
19.1. Introduction	797
19.2. A Model of Systematically Varying Parameters	798
19.3. Switching Regression Models	800
19.3.1. Seasonality Models	800
19.3.2. Piecewise Regression Models: Known Join Point	802
19.3.3. Piecewise Regression Models: Unknown Join Point	803
19.3.3a. Deterministic Switching on the Basis of Time	804
19.3.3b. Deterministic Switching on the Basis of Other Variables	805
19.3.3c. Stochastic Choice of Regimes	806
19.4. The Hildreth-Houck Random Coefficient Model	806
19.5. The Return to Normality Model	809
19.5.1. The Model	809
19.5.2. State Space Form of the Model and Generalized Least Squares	810
19.5.3. Generalizations	811
19.6. The Cooley-Prescott Model	811
19.7. Summary	814
19.8. Exercises	816
19.8.1. Individual Exercises (Section 19.2)	816
19.8.2. Individual Exercises (Section 19.6)	817
19.8.3. Class or Group Exercises (Section 19.4)	818
19.9. References	818
Chapter 20 Nonnormal Disturbances	822
20.1. The Consequences of Nonnormal Disturbances	822
20.1.1. Finite Variance	822
20.1.2. Infinite Variance	825
20.2. Tests for Normality	826
20.3. Frontier Production Functions	827
20.4. Some Robust Estimators	828
20.4.1. M-Estimators	829
20.4.2. L-Estimators	834
20.4.2a. l_1 -Estimation	836
20.4.2b. Linear Functions of Regression Quantiles	838
20.4.2c. Trimmed Least Squares	838
20.4.2d. Heteroscedastic Errors	839

20.5. The Box-Cox Transformation	839
20.6. A Multiplicative or an Additive Disturbance	842
20.7. Recommendations	845
20.8. Exercises	846
20.8.1. Individual Exercises	846
20.8.2. Group or Class Exercises	847
20.9. References	847
Chapter 21 On Selecting the Set of Regressors	854
21.1. Introduction	854
21.2. Nested Statistical Models	855
21.2.1. Statistical Consequences of an Incorrect Design Matrix	857
21.2.2. Mean Squared Error Norms	859
21.2.3. Some Alternative Variable Selection Rules	862
21.2.3a. The R^2 and \bar{R}^2 Criteria	862
21.2.3b. The C_p Conditional Mean Square Error Prediction Criterion	863
21.2.3c. An Unconditional Mean Square Error Criterion	865
21.2.3d. An F Test Statistic Interpretation	866
21.2.3e. The S_p Criterion—How Many Variables	867
21.2.3f. A Comment	869
21.2.4. Model Selection Tests	869
21.2.5. Information Criteria for Model Selection	870
21.2.5a. The Akaike Information Criterion (AIC)	870
21.2.5b. Sawa's Criterion (BIC)	871
21.2.5c. The Reformulated AIC	872
21.2.5d. The Posterior Probability Criterion	873
21.2.5e. Jeffrey-Bayes Posterior Odds Ratio	873
21.2.6. Stein Rules for Model Choice	875
21.2.6a. The Conditional Mean Forecasting Problem Restated	875
21.2.6b. A Stein-Rule Formulation	876
21.2.6c. A General Stein Rule	879
21.3. Nonnested Statistical Models	881
21.3.1. The Nonnested Framework and a Traditional Test	882
21.3.2. The Cox Test	883
21.3.3. The J Test	884
21.3.4. Some Comments	885
21.4. Choosing the Functional Form	885
21.5. Summary	888
21.6. Exercises	890
21.6.1. Individual Exercises	890
21.6.2. Joint or Class Exercises	891
21.7. References	892

Chapter 22 Multicollinearity	896
22.1. Introduction	896
22.2. Statistical Consequences of Multicollinearity	898
22.3. Detection of Multicollinearity	902
22.4. Traditional Solutions to the Multicollinearity Problem	904
22.4.1. Additional Sample Information	905
22.4.2. Exact Linear Constraints	906
22.4.3. Stochastic Linear Restrictions	907
22.4.4. Linear Inequality Restrictions	908
22.4.5. Prior Densities	908
22.5. Ad Hoc Solutions to the Multicollinearity Problem	909
22.5.1. Principal Components Regression	909
22.5.1a. Component Selection Procedures	911
22.5.1b. The Benchmark Function of Principal Components Regression	912
22.5.2. Ridge Regression	912
22.5.2a. The Ridge Family of Estimators	913
22.5.2b. Adaptive Ordinary Ridge Estimators	915
22.5.2c. Adaptive Generalized Ridge Estimators	917
22.6. Nontraditional Solutions to the Multicollinearity Problem: Stein-like Estimators	922
22.6.1. A James- and Stein-type Minimax Estimator	923
22.6.2. Minimax Estimators with the Ridge Property	925
22.7. The Multicollinearity Problem When Regressors Are Stochastic	926
22.8. Summary	927
22.9. Exercises	930
22.9.1. Individual Exercises (Section 22.3)	930
22.9.2. Joint or Class Exercises (Section 22.3)	931
22.9.3. Individual Exercises (Section 22.4)	931
22.9.4. Joint or Class Exercises (Section 22.4)	932
22.10. References	933
Appendix A Some Matrix and Distribution Theorems	939
A.1. Matrix and Vector Differentiation	939
A.2. Matrix Algebra Relevant to Normal Distribution Theory	940
A.3. Normal Distribution	942
A.4. Chi-square, t , and F Distributions	943

A.5. Kronecker Product and Partitioned and Generalized Inverses	946
A.6. The Lag Operator	948
A.7. Vectorization of Matrices	949
A.8. Determinants	950
Appendix B Numerical Optimization Methods	951
B.1. Introduction	951
B.2. Unconstrained Optimization	951
B.2.1. Gradient Methods	953
B.2.2. Method of Steepest Descent	955
B.2.3. Newton-Raphson Method	955
