1	Introduction	page 1
2	Univariate linear stochastic models: basic concepts	7
	2.1 Stochastic processes, ergodicity and stationarity	7
	2.2 Stochastic difference equations	9
	2.3 ARMA processes	11
	2.4 Linear stochastic processes	23
	2.5 ARMA model building	23
	2.6 Non-stationary processes and ARIMA models	31
	2.7 ARIMA modelling	41
	2.8 Forecasting using ARIMA models	44
3	Univariate linear stochastic models: further topics	50
	3.1 Determining the order of integration of a time series	51
	3.2 Decomposing time series: unobserved component models	
	and signal extraction	68
	3.3 Measures of persistence and trend reversion	76
	3.4 Fractional integration and long memory processes	83
4	Univariate non-linear stochastic models	90
	4.1 Martingales, random walks and non-linearity	90
	4.2 Testing the random walk hypothesis	92
	4.3 Stochastic variance models	94
	4.4 ARCH processes	101
	4.5 Other non-linear univariate models	113
	4.6 The Hamilton two-state switching-regime model	120
	4.7 Non-linear dynamics and chaos	123
	4.8 Testing for non-linearity	124
