Contents

Chapter 1. Computer Simulation Defined	I
Introduction	1
A Definition of Simulation	2
Why Simulate	6
Chapter 2. Computer Simulation Experiments with Models	11
of Economic Systems	11
Methodology	11
	11
Formulation of a Mathematical Model	$\frac{12}{15}$
Computer Program	15
Data Input and Starting Conditions	16
Data Generation	16
Validation	21
Experimental Design	2 2
The Problem of Stochastic Convergence	24
The Problem of Size	26
The Problem of Motive	27
The Multiple Response Problem	2 8
Data Analysis	29
F-Test	34
Multiple Comparisons	34
Multiple Rankings	34
Spectral Analysis	3:
Sequential Sampling	3:
Nonparametric Methods	36
Bibliography	36

viii CONTENTS

chapter 5. Management Science Models									40
Introduction									40
Properties of Computer Models									40
Markov Chain Models	<u>.</u> .								42
Queueing Models									44
A Single-Channel, Single-Station Mode									44
A Single-Channel, Multistation Model A Multichannel, Multistation Model									48 48
Inventory Models									52
Production Models									57
Marketing Models									59
The Pillsbury Model									59
The Anheuser-Busch Model									59
The Corning Glass Model									61
Other Marketing Models		-						•	61
Financial Models									61
The Clarkson Model									61
The Hertz Model									62
The Mattessich Model									64
The Sun Oil Model									64
Other Financial Models		•	•		٠	٠	•	•	65
Corporate Models									68
The Anheuser-Busch Model									68
The IBM Model									70
The Pillsbury Model									70
The XEROX Model				•	-	-	•	٠	72
Management Games								•	7 3

Chapter 4. Economic Models									89
Introduction									88
Models of the Firm									89
Cobweb Models									
Cobweb Model 1									

	CONTENTS	ix
Cobweb Model 2		91
Cobweb Model 3		92
A Model of a Competitive Industry		93
A Duopoly Model		96
Behavioral Models		99
Duopoly Model		100
Oligopoly Model		101
Department Store Model		101
Monopoly Model		105
Bonini Model		105
Industrial Dynamic (DYNAMO)		107
Reflections on Computer Models of the Firm		111
Industry Models		113
A Model of the Textile Industry		113
Endogenous Variables		114
Exogenous Variables		114
Status Variables		115
Identities		115
Behavioral Equations		115
Apparel Demand		115
Apparent Output		115
Demand for Textile Mill Products		115
Output of Textile Mill Products		116
Employment of Production Workers .		116
Earnings		116
Prices		116
Profit		116
Investment		117
A Model of the Shoe, Leather, Hide Industry		119
A Model of the Lumber Industry		124
Macroeconometric Models		126
Introduction		_
An Example Model		
Problem Formulation		
Model Formulation		
Parameter Estimation		
Computer Program Formulation		
Experimental Design		133
Data Analysis		133

	Fixed Sample Size Rules	

xiv CONTENTS

Testing a Hypothesis about the Mean	292	
Sequential Sampling Rules		
Estimation of the Population Mean		
Testing a Hypothesis about the Mean		
Comparing the Means of K Experimental Categories.		
A Multiple Ranking Procedure		
Autocorrelated Observations	. 295)
Bibliography	. 296	,
Chapter 12. Simulation Versus Analytical Solutions by E. Philip Howrey and H. H. Kelejian	299)
Introduction	. 299)
Simulation of Linear Models	. 301	L
Nonstochastic Simulation	. 301	l
Stochastic Simulation		
Simulation of Nonlinear Models	. 303	5
Reduced-Form Equations	. 306	3
Nonstochastic Simulation	. 308	3
Dynamic Properties of Stochastic Linear Systems	. 310	0
Final Form and Solution of a Linear Model	. 31	1
Spectral Representation of Solution	. 313	2
Application of Spectral Method		
Spectral Representation in Validation	. 31	6
Conclusions	. 31	7
Bibliography	. 31	8
Chapter 13. A Computer Model of the Tobacco Industry by John M. Vernon, Norfleet W. Rives, and Thomas H. Naylor	32	20
Introduction	. 32	20
Description of the Industry	. 32	20
The Model	. 32	:3
