## Preface — V

|          |  |
|----------|--|
| <b>1</b> | <b>Introduction to computer mathematics languages — 1</b>  |
| 1.1      | Introduction to solving mathematical problems — 1          |
| 1.1.1    | Why learn a computer mathematics language? — 1             |
| 1.1.2    | Analytical and numerical solutions — 5                     |
| 1.1.3    | Development of mathematical packages — 6                   |
| 1.1.4    | Limitations of conventional computer languages — 8         |
| 1.2      | History of computer mathematics languages — 10             |
| 1.2.1    | The early days of computer mathematics languages — 10      |
| 1.2.2    | Representative modern computer mathematics languages — 11  |
| 1.3      | Three-phase solution of scientific computing problems — 12 |
| 1.4      | Problems — 14  |
| <br>     |  |
| <b>2</b> | <b>Fundamentals of MATLAB programming — 17</b>             |
| 2.1      | Command windows and fundamental commands — 18              |
| 2.1.1    | Regulations in variable names — 18                         |
| 2.1.2    | Reserved constants — 19                                    |
| 2.1.3    | Setting of display formats — 20                            |
| 2.1.4    | Low-level operating system commands — 21                   |
| 2.1.5    | Setting of MATLAB working environment — 21                 |
| 2.1.6    | MATLAB workspace and management — 23                       |
| 2.1.7    | Other supporting facilities — 23                           |
| 2.2      | Commonly used data types — 24                              |
| 2.2.1    | Numeric data types — 24                                    |
| 2.2.2    | Symbolic data — 26   |
| 2.2.3    | Generation of arbitrary symbolic matrices — 28             |
| 2.2.4    | Symbolic functions — 29                                    |
| 2.2.5    | Integer and logic variables — 29                           |
| 2.2.6    | Recognition of data types — 29                             |
| 2.2.7    | Sizes and lengths of matrices — 30                         |
| 2.3      | String data type — 30                                      |
| 2.3.1    | Expression of string variables — 30                        |
| 2.3.2    | String processing methods — 32                             |
| 2.3.3    | Conversion of string variables — 33                        |
| 2.3.4    | Executions of string commands — 34                         |
| 2.3.5    | Interface of MuPAD language — 35                           |
| 2.4      | Other commonly used data types — 36                        |
| 2.4.1    | Multidimensional arrays — 36                               |
| 2.4.2    | Cell arrays — 37   |

|          |   |
|----------|---|
| 2.4.3    | Tables — 38   |
| 2.4.4    | Structured variables — 41                                       |
| 2.4.5    | Other data types — 42   |
| 2.5      | Fundamental statement structures — 42                           |
| 2.5.1    | Direct assignment statements — 42                               |
| 2.5.2    | Function call statements — 43                                   |
| 2.5.3    | Functions with different syntaxes — 43                          |
| 2.5.4    | Colon expressions — 44  |
| 2.5.5    | Submatrix extractions — 45                                      |
| 2.5.6    | Generation of equally spaced row vectors — 46                   |
| 2.6      | Reading and writing of different data types — 46                |
| 2.6.1    | Reading and writing of data files — 46                          |
| 2.6.2    | Low-level reading and writing commands — 47                     |
| 2.6.3    | Reading and writing of Excel files — 48                         |
| 2.7      | Problems — 50   |
| <b>3</b> | <b>Fundamental mathematical computations — 53</b>               |
| 3.1      | Algebraic computation of matrices — 53                          |
| 3.1.1    | Transposing, flipping and rotating matrices — 53                |
| 3.1.2    | Arithmetic operations — 55                                      |
| 3.1.3    | Complex matrices and transformations — 56                       |
| 3.1.4    | Powers and roots of matrices — 57                               |
| 3.1.5    | Dot operations — 59   |
| 3.2      | Logic and comparison operations — 59                            |
| 3.2.1    | Logic operations with matrices — 59                             |
| 3.2.2    | Comparisons of matrices — 60                                    |
| 3.2.3    | Searching commands in matrix elements — 60                      |
| 3.2.4    | Attribute judgement — 62  |
| 3.3      | Computation of transcendental functions — 62                    |
| 3.3.1    | Exponentials and logarithmic functions — 63                     |
| 3.3.2    | Trigonometric functions — 63                                    |
| 3.3.3    | Inverse trigonometric functions — 65                            |
| 3.3.4    | Transcendental functions of matrices — 66                       |
| 3.4      | Simplifications and conversions of symbolic expressions — 68    |
| 3.4.1    | Polynomial operations — 68                                      |
| 3.4.2    | Conversions and simplifications of trigonometric functions — 69 |
| 3.4.3    | Simplification of symbolic expressions — 70                     |
| 3.4.4    | Variable substitution of symbolic expressions — 71              |
| 3.4.5    | Conversions of symbolic expressions — 72                        |
| 3.5      | Fundamental computations with data — 72                         |
| 3.5.1    | Integer rounding and rationalization of data — 73               |
| 3.5.2    | Sorting and finding maximum and minimum of vectors — 74         |

|          |   |
|----------|---|
| 3.5.3    | Mean, variance and standard deviation — 75                  |
| 3.5.4    | Prime factors and polynomials — 76                          |
| 3.5.5    | Permutations and combinations — 78                          |
| 3.6      | Problems — 79   |
| <b>4</b> | <b>Flow control structures of MATLAB language — 83</b>      |
| 4.1      | Loop structures — 83  |
| 4.1.1    | The <code>for</code> loop structure — 83                    |
| 4.1.2    | The <code>while</code> loop structure — 86                  |
| 4.1.3    | Loop implementation of iterations — 87                      |
| 4.1.4    | Assistant statements of loop structures — 90                |
| 4.1.5    | Vectorized implementation of loops — 90                     |
| 4.2      | Conditional structures — 93                                 |
| 4.2.1    | Simple conditional structures — 93                          |
| 4.2.2    | General form of conditional structures — 94                 |
| 4.2.3    | Vectorized expressions of piecewise functions — 96          |
| 4.3      | Switch structures — 98                                      |
| 4.4      | Trial structure — 100                                       |
| 4.5      | Problems — 101  |
| <b>5</b> | <b>Function programming and debugging — 105</b>             |
| 5.1      | MATLAB scripts — 105  |
| 5.2      | Fundamental structures of MATLAB functions — 106            |
| 5.2.1    | Fundamental function structures — 106                       |
| 5.2.2    | Regulations in function names — 108                         |
| 5.2.3    | Examples of function programming — 108                      |
| 5.3      | Skills of MATLAB function programming — 112                 |
| 5.3.1    | Recursive structures — 112                                  |
| 5.3.2    | Functions with variable numbers of inputs and outputs — 114 |
| 5.3.3    | Fault tolerance manipulation — 116                          |
| 5.3.4    | Global variables — 117                                      |
| 5.3.5    | Reading and writing of MATLAB workspace — 118               |
| 5.3.6    | Anonymous and inline functions — 119                        |
| 5.3.7    | Subfunctions and private functions — 121                    |
| 5.4      | MATLAB function debugging — 122                             |
| 5.4.1    | Debugging of MATLAB functions — 122                         |
| 5.4.2    | Pseudocode and code protection — 125                        |
| 5.5      | MATLAB live editor — 125                                    |
| 5.5.1    | Live editor interface — 126                                 |
| 5.5.2    | Creating a live document — 126                              |
| 5.5.3    | Execution of embedded code — 128                            |
| 5.5.4    | Embed other objects in live editor — 128                    |

|          |   |
|----------|---|
| 5.5.5    | Output of live files — 131                              |
| 5.6      | Problems — 131  |
| <b>6</b> | <b>Two-dimensional graphics — 135</b>                   |
| 6.1      | Drawing two-dimensional plots — 135                     |
| 6.1.1    | Plotting data — 135                                     |
| 6.1.2    | Plots of mathematical functions — 139                   |
| 6.1.3    | Plots of piecewise functions — 139                      |
| 6.1.4    | Titles in plots — 141                                   |
| 6.1.5    | Plots with multiple vertical axes — 143                 |
| 6.2      | Decoration of plots — 145                               |
| 6.2.1    | Plot decoration with interface tools — 145              |
| 6.2.2    | TeX support commands — 146                              |
| 6.2.3    | Superimposing formulas in plots — 148                   |
| 6.3      | Other two-dimensional plotting functions — 149          |
| 6.3.1    | Polar plots — 150                                       |
| 6.3.2    | Plots of discrete samples — 151                         |
| 6.3.3    | Histograms and pie charts — 152                         |
| 6.3.4    | Filled plots — 155                                      |
| 6.3.5    | Logarithmic plots — 156                                 |
| 6.3.6    | Error bar plots — 157                                   |
| 6.3.7    | Dynamic trajectories — 157                              |
| 6.3.8    | Two-dimensional animation — 158                         |
| 6.4      | Plot window partitioning — 159                          |
| 6.4.1    | Regular partitioning — 159                              |
| 6.4.2    | Arbitrary segmentation — 161                            |
| 6.5      | Implicit functions — 162                                |
| 6.6      | Displaying and simple manipulation of images — 165      |
| 6.6.1    | Input images — 165                                      |
| 6.6.2    | Editing and displaying images — 166                     |
| 6.6.3    | Color space conversion — 167                            |
| 6.6.4    | Edge detection — 167                                    |
| 6.6.5    | Histogram equalization — 168                            |
| 6.7      | Output of MATLAB graphs — 170                           |
| 6.7.1    | Output menus and applications — 170                     |
| 6.7.2    | Output commands of plots — 171                          |
| 6.8      | Problems — 171  |
| <b>7</b> | <b>Three-dimensional graphics — 175</b>                 |
| 7.1      | Three-dimensional curves — 175                          |
| 7.1.1    | Drawing three-dimensional plots from data — 175         |
| 7.1.2    | Three-dimensional plots of mathematical functions — 176 |

|          |  |
|----------|--|
| 7.1.3    | Filled plots — 177   |
| 7.1.4    | Bar and pie charts — 178                                   |
| 7.1.5    | Ribbon plots — 180   |
| 7.2      | Three-dimensional surfaces — 182                           |
| 7.2.1    | Mesh grids and surfaces — 182                              |
| 7.2.2    | Shading and lights — 186                                   |
| 7.2.3    | Three-dimensional surface from images — 188                |
| 7.2.4    | Representation of functions — 189                          |
| 7.2.5    | Surfaces from scattered data — 190                         |
| 7.3      | Viewpoint setting in three-dimensional plots — 191         |
| 7.3.1    | Definition of viewpoints — 192                             |
| 7.3.2    | Orthographic views — 193                                   |
| 7.3.3    | Setting of arbitrary viewpoints — 193                      |
| 7.4      | Other three-dimensional plots — 194                        |
| 7.4.1    | Contour lines — 194  |
| 7.4.2    | Quiver plots — 196   |
| 7.4.3    | Three-dimensional implicit plots — 197                     |
| 7.4.4    | Surfaces of parametric equations — 199                     |
| 7.4.5    | Surfaces of complex functions — 199                        |
| 7.4.6    | Spheres and cylinders — 200                                |
| 7.4.7    | Voronoi diagrams and Delaunay triangulation — 203          |
| 7.5      | Special treatment of three-dimensional plots — 205         |
| 7.5.1    | Rotation of surfaces — 205                                 |
| 7.5.2    | Axis specification for surfaces — 207                      |
| 7.5.3    | Cutting of surfaces — 208                                  |
| 7.5.4    | Patches in surfaces — 208                                  |
| 7.6      | Four-dimensional plots — 210                               |
| 7.6.1    | Slices — 210   |
| 7.6.2    | A volume visualization interface — 212                     |
| 7.6.3    | Creating and playing of three-dimensional animations — 213 |
| 7.7      | Problems — 214   |
| <b>8</b> | <b>MATLAB and its interface to other languages — 217</b>   |
| 8.1      | Introduction to C interfaces with MATLAB — 218             |
| 8.1.1    | Environment setting of compilers — 218                     |
| 8.1.2    | Data types in Mex — 218                                    |
| 8.1.3    | Mex file structures — 220                                  |
| 8.1.4    | Mex file programming and procedures — 223                  |
| 8.2      | Mex manipulation of different data types — 225             |
| 8.2.1    | Processing of various input and output data types — 225    |
| 8.2.2    | Reading and writing of string variables — 226              |
| 8.2.3    | Processing of multidimensional arrays — 228                |

|           |   |
|-----------|---|
| 8.2.4     | Processing of cells — 229   |
| 8.2.5     | Reading and writing of MAT files — 231                                    |
| 8.3       | Direct calling of MATLAB functions from C programs — 233                  |
| 8.4       | Standalone program conversion from MATLAB functions — 238                 |
| 8.5       | Problems — 239  |
| <b>9</b>  | <b>Fundamentals in object-oriented programming — 241</b>                  |
| 9.1       | Concepts of object oriented programming — 241                             |
| 9.1.1     | Classes and objects — 241   |
| 9.1.2     | Data type of classes and objects — 242                                    |
| 9.2       | Design of classes — 243   |
| 9.2.1     | The design of a class — 244   |
| 9.2.2     | Design and input of classes — 245   |
| 9.2.3     | Class display — 246   |
| 9.3       | Programming of overload functions — 247                                   |
| 9.3.1     | Overload addition functions — 247   |
| 9.3.2     | Simplification functions via like-term collection — 248                   |
| 9.3.3     | Overload subtraction functions — 249                                      |
| 9.3.4     | Overload multiplication functions — 250                                   |
| 9.3.5     | Overload power functions — 252  |
| 9.3.6     | Assignment and extraction of fields — 253                                 |
| 9.4       | Inheritance and extension of classes — 254                                |
| 9.4.1     | Definition and display of extended classes — 254                          |
| 9.4.2     | Overload functions for ftf objects — 256                                  |
| 9.4.3     | Frequency domain analysis of fractional-order transfer<br>functions — 258 |
| 9.5       | Problems — 259  |
| <b>10</b> | <b>Graphical user interface design using MATLAB — 261</b>                 |
| 10.1      | Essentials in graphical user interface design — 261                       |
| 10.1.1    | The relationships of objects in MATLAB interface — 261                    |
| 10.1.2    | Window objects and properties — 262                                       |
| 10.1.3    | Commonly used properties in window objects — 262                          |
| 10.1.4    | Extraction and modification of object properties — 265                    |
| 10.1.5    | Easy dialog boxes — 267   |
| 10.1.6    | Standard dialog boxes — 269   |
| 10.2      | Fundamental controls in interface design — 272                            |
| 10.2.1    | Commonly used controls supported — 273                                    |
| 10.2.2    | Commonly used properties in controls — 274                                |
| 10.2.3    | Getting the handles — 275   |
| 10.3      | Graphical user interface design tool – Guide — 276                        |
| 10.4      | Advanced techniques in interface design — 286                             |

- 10.4.1 Design of menu systems — 287
- 10.4.2 Design of toolbars — 287
- 10.4.3 Embedding ActiveX controls — 289
- 10.5 APP packaging and publication — 291
- 10.6 Problems — 291
