I Introduction

1 **Nonlinear Modelling: An Introduction** 1
John Creedy and Vance L. Martin
1.1 Linear Models 2
1.1.1 Estimation and Prediction 3
1.1.2 A Structural Form 6
1.1.3 A Distributional Specification 7
1.2 A Nonlinear Approach 8
1.2.1 The Generalised Exponential Family 8
1.2.2 Bimodality and the Generalised Exponential . 10
1.2.3 Estimation and Prediction 11
1.3 Data Generating Processes 15
1.3.1 The Stochastic Differential Equation 16
1.3.2 Transitional and Stationary Distributions 18
1.4 Examples of Nonlinear Models 21
1.4.1 Partial Equilibrium Analysis 21
1.4.2 Variance Proportional to Price 21
1.4.3 A Structural Model with Multiple Equilibria .. 22
1.5 Generating the Hypothetical Time Series 24
1.5.1 The Model 24
1.5.2 Simulation procedure 25
1.6 Conclusions 26

II Cross-sectional Applications

2 **A Model of Income Distribution** 29
John Creedy, Jenny N. Lye and Vance L. Martin
2.1 The Model 30
2.1.1 Labour Demand and Supply 30
2.1.2 The Stochastic Specification 32
2.1.3 Alternative Specifications 35
2.2 Estimation Methods 37
2.2.1 The Unconditional Distribution 37
2.2.2 The Conditional Distribution 39
2.3 Applications 40
2.3.1 Estimates of the Unconditional Earnings Distribution 40
2.3.2 Estimates of the Conditional Earnings Distribution 42
2.4 Conclusions 45

3 **Truncated Distribution Families** 47
Jenny N. Lye and Vance L. Martin
3.1 A Stochastic Model of Income 48
3.2 A Family of Truncated Distributions 50
3.2.1 Doubly Truncated Distributions 50
3.2.2 Singly Truncated Distributions 53
3.3 Estimation of Distributions 55
3.3.1 Maximum Likelihood 55
3.3.2 Least Squares 56
3.3.3 Monte Carlo Simulations 57
3.4 Estimation of Regression Models 61
3.5 Testing 62
3.6 Conclusions 68

4 **Betit: A Flexible Binary Choice Model** 69
Alex Bakker and Vance L. Martin
4.1 The Binary Choice Problem 70
4.2 The Betit Model 71
4.2.1 Parameterisation and Identification 74
4.2.2 Relationships with Existing Approaches 77
4.3 Pseudo Maximum Likelihood Estimation 80
4.4 Constructing Normality Tests 82
4.5 Female Labour Force Participation 86
4.6 Conclusions 89

5 Estimation of Generalised Distributions 91
Alex Bakker
5.1 Derivation of the LSFE 92
5.2 Error Properties 94
5.2.1 Derivation of Quadrature Error (ε_1) 94
5.2.2 Numerical Example 96
5.2.3 Empirical Error Term (ε_2) 97
5.3 Econometric Properties 98
5.3.1 Unbiasedness and Consistency of the LSFE .. 99
5.3.2 Generalised Least Squares Frequency Estimator 100
5.3.3 Monte Carlo Experiments 101
5.4 Optimal (K,N) Relationship 102
5.4.1 The MSE Criterion 104
5.4.2 A Numerical Solution 105
5.4.3 Numerical Example 106
5.5 LSFE and GLSFE Inference 107
5.5.1 Inference Assumptions 108
5.5.2 Monte Carlo Testing of Inference Assumptions 108
5.6 Conclusions 109

6 Age and the Distribution of Earnings 111
Alex Bakker and John Creedy
6.1 A Demand and Supply Model 112
6.1.1 The Deterministic Model 112
6.1.2 The Stochastic Specification 113
6.2 Estimation Using Grouped Data 114
6.2.1 Unconditional Distribution Estimates 115
6.2.2 Maximum Likelihood Techniques 117
6.3 Application to New Zealand Data 118
6.3.1 New Zealand Income Distribution Data 118
6.3.2 Unconditional Distribution Estimates 120
6.3.3 Conditional Model Specification 124
6.4 Conclusions 126

7 Count Data and Discrete Distributions 129
David Dickson and Vance L. Martin
7.1 Families of Discrete Distributions 129
7.2 Generalised Exponential Distributions 132
7.3 Estimation Procedures 133
7.4 Numerical Illustrations 134

7.5 Aggregate Claims Distributions 138
7.6 Conclusions 140

III Time Series Applications

8 **A Model of the Real Exchange Rate** 143
John Creedy, Jenny N. Lye and Vance L. Martin
8.1 The Model 144
8.1.1 The Error Correction Representation 145
8.1.2 Distributional Dynamics 145
8.1.3 Properties of the Model 147
8.2 Estimation and Prediction 148
8.2.1 Maximum Likelihood Estimation 148
8.2.2 Prediction Conventions 149
8.3 Empirical Application 149
8.3.1 Model Specification 149
8.3.2 The Results 151
8.3.3 Forecasting 151
8.3.4 Interpretation 155
8.4 Conclusions 158

9 **Jump Models and Higher Moments** 161
G.C. Lim, Jenny N. Lye, Gael M. Martin and Vance L. Martin
9.1 A General Model of Jump Dynamics 162
9.1.1 The Linear Model 163
9.1.2 The Nonlinear Model 163
9.2 Theoretical Examples 164
9.2.1 Step Function 165
9.2.2 Heteroscedasticity 165
9.3 The Australian 1987 Crash 168
9.3.1 Integration and Cointegration Properties 168
9.3.2 Model Specification 170
9.3.3 Distributional Characteristics 170
9.3.4 Forecasting 173
9.4 Conclusions 174

10 **A Topological Test of Chaos** 177
Eugene S.Y. Choo
10.1 The Topological Approach 178
10.2 Properties of Close Returns Plots 181
10.2.1 Periodic Behaviour 181

10.2.2 Quasi-Periodic Behaviour 184
10.2.3 Chaotic Behaviour 184
10.2.4 Stochastic Behaviour 185
10.3 Simulated Economic Models 186
10.3.1 Near Unit Processes 186
10.3.2 ARCH 187
10.4 Application to Australian Data 187
10.4.1 Business Cycles 187
10.4.2 Financial Markets 188
10.5 Conclusions 189

11 Genetic Algorithms and Trading Rules 191
Robert Pereira
11.1 Technical Trading Rules 193
11.1.1 Moving Average Rules 193
11.1.2 Rules Based on Order Statistics 195
11.2 Optimisation Procedures 196
11.2.1 Problem Representation 197
11.2.2 Objective Function 198
11.2.3 Genetic Algorithm Operations 198
11.2.3 The Steps Involved in a Genetic Algorithm ... 200
11.3 Share Market Application 200
11.3.1 The Data 200
11.3.2 Descriptive Statistics 201
11.3.3 Selection of Optimal Parameters 203
11.3.4 Trading Rule Parameter Estimates 206
11.3.5 Out-of-sample Performance 208
11.4 Conclusions 209

IV Neural Network Applications

12 Artificial Neural Networks 213
Vance L. Martin and Clarence Tan
12.1 Model Specification 214
12.1.1 Basics and Terminology 214
12.1.2 Univariate Generalisations 215
12.1.3 Multivariate Generalisations 217
12.2 Estimation 219
12.2.1 Search Methods 219
12.2.2 Gradient Methods 221
12.2.3 Back Propagation 225

12.3 Testing 229
12.3.1 Construction of Test Statistics 230
12.3.2 Monte Carlo Results 232
12.4 Relationships with Econometric Models 235
12.4.1 Nonlinear Time Series Models 235
12.4.2 Binary Choice Models 235
12.5 An ANN Foreign Trading System 236
12.5.1 The Trading System 236
12.5.2 Data and Specification 237
12.5.3 Results 238
12.6 Conclusions 239

13 An ANN Model of the Stock Market **241**
G.C. Lim and P.D. McNelis
13.1 Data: Statistical Analysis and Filtering 242
13.2 The Linear Autoregressive Model 246
13.3 The GARCH-M Model 248
13.4 The Neural Network Model 248
13.5 Out-of-sample Forecasting 253
13.6 Conclusions 253

14 Exchange Rate Forecasting Models **255**
Vance L. Martin, Eugene S.Y. Choo and Leslie Teo
14.1 Nonlinear Forecasting Models 256
14.1.1 Univariate Models 256
14.1.2 Multivariate Models 260
14.2 Statistical Properties of the Data 261
14.2.1 Description 261
14.2.2 Tests of Nonlinearity 261
14.2.3 Recurrence Plots 262
14.3 Empirical Comparisons of Models 263
14.3.1 Univariate Results 263
14.3.2 Multivariate Results 264
14.4 Conclusions 264
