Preface	xi
1 Simulation and Conditional Probability	1
1.0 Getting Started with Simtools in Excel	2
1.1 How to Toss Coins in a Spreadsheet	3
1.2 A Simulation Model of 20 Sales Calls	7
1.3 Analysis Using Excel's Data-Table Command	16
1.4 Conditional Independence	20
1.5 A Continuous Random Skill Variable from a Triangular Distribution	20
1.6 Probability Trees and Bayes's Rule	27
1.7 Advanced Spreadsheet Techniques: Constructing a Table with Multiple Inputs	38
1.8 Using Models	41
1.9 The Modeling Process	43
1.10 Summary	48
Further Readings	50
Exercises	50
2 Discrete Random Variables	59
2.1 Unknown Quantities in Decisions under Uncertainty	59
2.2 Charting a Probability Distribution	62
2.3 Simulating Discrete Random Variables	65
2.4 Expected Value and Standard Deviation	70
2.5 Estimates from Sample Data	75
2.6 Accuracy of Sample Estimates	78
2.7 Decision Criteria	84
2.8 Multiple Random Variables	89
2.9 Summary	91
Further Readings	92
Exercises	93

3	Utility Theory with Constant Risk Tolerance	97
	3.1 Taking Account of Risk Aversion: Utility Analysis with Probabilities	98
	3.2 Utility Analysis from Simulation Data	109
	3.3 The More General Assumption of Linear Risk Tolerance	111
	3.4 Advanced Technical Note on Expected Utility Theory	113
	3.5 Advanced Technical Note on Constant Risk Tolerance	118
	3.6 Limitations of Expected Utility Theory	123
	3.7 Summary	125
	Further Readings	126
	Exercises	126
4	Continuous Random Variables	129
	4.1 Normal Distributions	130
	4.2 EXP and LN	135
	4.3 Lognormal Distributions	137
	4.4 Application: The Time Diversification Fallacy	144
	4.5 Generalized Lognormal Distributions	149
	4.6 Subjective Probability Assessment	152
	4.7 A Decision Problem with Discrete and Continuous Unknowns	157
	4.8 Certainty Equivalents of Normal Lotteries	163
	4.9 Other Probability Distributions	164
	4.10 Summary	173
	Further Readings	175
	Exercises	176
5	Correlation and Multivariate Normal Random Variables	181
	5.1 Joint Distributions of Discrete Random Variables	182
	5.2 Covariance and Correlation	186
	5.3 Linear Functions of Several Random Variables	188
	5.4 Estimating Correlations from Data	192
	5.5 Making Multivariate Normal Random Variables with CORAND and NORM.INV	197
	5.6 Portfolio Analysis with Multivariate Normal Asset Returns	202
	5.7 Excel Solver and Efficient Portfolio Design	207
	5.8 Political Forecasting	214
	5.9 Subjective Assessment of Correlations	220
	5.10 Using CORAND with Non-Normal Random Variables	225
	5.11 More about Linear Functions of Random Variables	229
	5.12 Summary	233
	Further Readings	234
	Exercises	234

6	Conditional Expectation	239
6.1	Dependence among Random Variables	239
6.2	Estimating Conditional Expectations and Standard Deviations	243
6.3	The Expected-Posterior Law in a Discrete Example	247
6.4	Backwards Analysis of Conditional Expectations in Tree Diagrams	252
6.5	Conditional Expectation Relationships and Correlation	255
6.6	Uncertainty about a Probability	257
6.7	Linear Regression Models	261
6.8	Confidence Intervals and Prediction Intervals	265
6.9	Regression Analysis and Least Squared Errors	271
6.10	Summary	274
	Further Readings	275
	Exercises	276
7	Optimization of Decision Variables	279
7.1	General Techniques for Using Simulation in Decision Analysis	280
7.2	Strategic Use of Information	290
7.3	Decision Trees	295
7.4	Revenue Management	301
7.5	A Simple Bidding Problem	306
7.6	The Winner's Curse	309
7.7	Analyzing Competitive Behavior	318
7.8	Summary	327
	Further Readings	329
	Exercises	330
8	Risk Sharing and Finance	341
8.1	Optimal Risk Sharing in a Partnership of Individuals with Constant Risk Tolerance	342
8.2	Optimality of Linear Rules in the Larger Class of Nonlinear Sharing Rules	351
8.3	Risk Sharing Subject to Moral-Hazard Incentive Constraints	355
8.4	Piecewise-Linear Sharing Rules with Moral Hazard	362
8.5	Corporate Decision Making and Asset Pricing in the Stock Market	366
8.6	Fundamental Ideas of Arbitrage Pricing Theory	378
8.7	Borrowing and Lending Decisions in Credit Markets with Adverse Selection	383
8.8	Summary	389
	Further Readings	390
	Exercises	391

9	Dynamic Models of Growth	397
	9.1 Net Present Value	397
	9.2 Forecasting Models	400
	9.3 Forecasting Example: The Goeing Case	405
	9.4 Brownian-Motion Growth Models	413
	9.5 The Value of Flexibility	418
	9.6 Log-Optimal Investment Strategies	423
	9.7 Some Mathematics of Gambling	430
	9.8 Risk Aversion on Growth Rates	434
	9.9 Summary	438
	Further Readings	439
	Exercises	439
10	Dynamic Models of Arrivals	447
	10.1 Exponential Arrival Models	447
	10.2 Queueing Models	454
	10.3 A Simple Inventory Model	461
	10.4 The Transmission of Disease: Fixed Population	465
	10.5 The Transmission of Disease: Variable Population	470
	10.6 Project Length and Critical Tasks	474
	10.7 Summary	478
	Further Readings	479
	Exercises	479
11	Model Risk	483
	11.1 Implementation and Data Errors	483
	11.2 Interpretation Errors	485
	11.3 Model Specification Errors	485
	11.4 Functional Form Mis-specification	486
	11.5 Correlation Mis-specification	493
	11.6 Mis-specification due to Incomplete Information	496
	11.7 Volatility Mis-specification	498
	11.8 Mitigating Model Risk: Estimation, Validation, and Testing	510
	11.9 Mitigating Model Risk: The Precautionary Principle	517
	11.10 Summary	519
	Further Readings	521
	Exercises	521
	Appendix: Excel Add-Ins for Use with This Book	525
	References	533
	Index	535
