Preface	xi
CHAPTER 1 INTRODUCTION	1
1-1 Factor Analysis and Structural Theories	1
1-2 Brief History of Factor Analysis as a Linear Model	3
1-3 An Example of Factor Analysis	10
CHAPTER 2 MATHEMATICAL FOUNDATIONS FOR FACTOR ANALYSIS	16
2-1 Introduction	16
2-2 Scalar Algebra	17
2-3 Vectors	19
2-4 Matrix Algebra	30
2-5 Determinants	37
2-6 The Treatment of Variables as Vectors	43
2-7 Maxima and Minima of Functions	50
	vii

CHAPTER 3 COMPOSITE VARIABLES	61
3-1 Composite Variables	61
3-2 Unweighted Composite Variables	62
3-3 Differentially-weighted composite Variables	70
3-4 Matrix Equations for Composite Variables	72
CHAPTER 4 MULTIPLE AND PARTIAL CORRELATION	77
4-1 Multiple Correlation	77
4-2 Partial Correlation	84
4-3 Determinantal Formulas	85
4-4 Multiple Correlation in Terms of Partial Correlation	87
CHAPTER 5 FUNDAMENTAL EQUATIONS OF FACTOR ANALYSIS	95
5-1 The Analysis of a Variable into Components	95
5-2 The Use of Matrix Notation in Factor Analysis	100
CHAPTER 6 METHODS OF FACTOR EXTRACTION	103
6-1 A Rationale for Finding Factors and Factor Loadings	103
6-2 The Diagonal Method of Factoring	108
6-3 The Centroid Method of Factoring	110
6-4 The Principal-axes Methods	111
CHAPTER 7 COMMON-FACTOR ANALYSIS	132
7-1 Introduction	132
7-2 Axioms of Common-factor Analysis	134
7-3 The Concept of Minimum Rank	135
7-4 Lower-bound Estimates of Communalities	139
7-5 Fitting the Common-factor Model to a Correlation Matrix	149
CHAPTER 8 OTHER MODELS OF FACTOR ANALYSIS	173
8-1 Introduction	173
8-2 Component Analysis	174
8-3 Image Analysis	186
8-4 Canonical-factor Analysis	196
8-5 Image Factor Analysis	204
8-6 Psychometric Inference in Factor Analysis	207
CHAPTER 9 GRAPHICAL ROTATION	217
9-1 Introduction	217
9-2 Simple Structure	218
9-3 Oblique Graphical Rotation	227

CHAPTER 10 ORTHOGONAL ANALYTIC ROTATION	249
10-1 Orthogonal Analytic Rotation	249
10-2 The Quartimax Criterion	250
10-3 The Varimax Criterion	258
10-4 The Transvarimax Methods	261
10-5 Simultaneous Orthogonal Varimax and Parsimax	265
CHAPTER 11 OBLIQUE ANALYTIC ROTATION	272
11-1 General	272
11-2 The Oblimax Criterion	273
11-3 Oblimin Methods	277
11-4 Maxplane Oblique Transformation Method	285
11-5 Harris-Kaiser Oblique Transformations	288
11-6 Practical Recommendations	292
CHAPTER 12 PROCRUSTEAN TRANSFORMATIONS	293
12-1 General	293
12-2 Orthogonal Procrustean Transformations	294
12-3 Oblique Procrustean Transformations	299
CHAPTER 13 FACTOR SCORES	321
13-1 Introduction	321
13-2 Scores on Component Variables	322
13-3 Indeterminacy of Factor Scores	327
13-4 Estimators of Common Factors	331
CHAPTER 14 FACTORIAL INVARIANCE	337
14-1 Introduction	337
14-2 Invariance under Selection of Variables	338
14-3 Invariance under Selection of Experimental Populations	340
14-4 Comparing Factors across Populations	351
CHAPTER 15 CONFIRMATORY FACTOR ANALYSIS	361
15-1 Exploratory versus Confirmatory Factor Analysis	361
15-2 Analysis of Covariance Structures	366
15-3 Applications	384
CHAPTER 16 FACTOR ANALYSIS AND MULTIVARIATE ANALYSIS	402
16-1 Introduction	402

16-2	Predicting a Single Criterion	403
16-3	Predicting Several Criteria	409
16-4	Canonical Correlation	417
16-5	Multiple discriminant Analysis	423
	Bibliography	429
	Name Index	437
	Subject Index	443
