Preface	ix
Notation	x
I. ELECTROSTATICS OF CONDUCTORS	
§1. The electrostatic field of conductors	1
§2. The energy of the electrostatic field of conductors	3
§3. Methods of solving problems in electrostatics	9
§4. A conducting ellipsoid	20
§5. The forces on a conductor	31
II. ELECTROSTATICS OF DIELECTRICS	
§6. The electric field in dielectrics	36
§7. The dielectric permeability	38
§8. A dielectric ellipsoid	42
§9. The dielectric permeability of a mixture	45
§10. Thermodynamic relations for dielectrics in an electric field	47
§11. The total free energy of a dielectric	52
§12. Electrostriction of isotropic dielectrics	55
§13. Dielectric properties of crystals	58
§14. The sign of the dielectric susceptibility	63
§15. Electric forces in a fluid dielectric	64
§16. Electric forces in solids	69
§17. Piezoelectrics	73
§18. Thermodynamic inequalities	79
§19. Ferroelectrics	83
III. CONSTANT CURRENT	
§20. The current density and the conductivity	92
§21. The Hall effect	96
§22. The contact potential	99
§23. The galvanic cell	101
§24. <i>Electrocapillarity</i>	103
§25. Thermoelectric phenomena	104
§26. Diffusion phenomena	110
IV. CONSTANT MAGNETIC FIELD	
§27. Constant magnetic field	113
§28. Magnetic symmetry of crystals	116
§29. The magnetic field of a constant current	119
§30. Thermodynamic relations in a magnetic field	126
§31. The total free energy of a magnetic substance	129
§32. The energy of a system of currents	131

	<i>Page</i>
§33. The self-inductance of linear conductors	136
§34. Forces in a magnetic field	141
§35. Gyromagnetic phenomena	144
V. FERROMAGNETISM	
§36. Ferromagnetics near the Curie point	146
§37. The magnetic anisotropy energy	149
§38. Magnetostriction of ferromagnetics	155
§39. The domain structure of ferromagnetics	158
§40. The antiferromagnetic Curie point	165
VI. SUPERCONDUCTIVITY	
§41. The magnetic properties of superconductors	167
§42. The superconductivity current	169
§43. The critical field	173
§44. The intermediate state	178
VII. QUASI-STATIC ELECTROMAGNETIC FIELD	
§45. Eddy currents	186
§46. The skin effect	195
§47. The complex resistance	197
§48. Capacity in a quasi-steady current circuit	202
§49. Motion of a conductor in a magnetic field	205
§50. Excitation of currents by acceleration	210
VIII. MAGNETIC FLUID DYNAMICS	
§51. The equations of motion for a fluid in a magnetic field	213
§52. Hydromagnetic waves	218
§53. Tangential and rotational discontinuities	224
§54. Shock waves	229
§55. The spontaneous magnetic field in turbulent motion of a conducting fluid	234
IX. THE ELECTROMAGNETIC WAVE EQUATIONS	
§56. The field equations in a dielectric in the absence of dispersion	239
§57. The electrodynamics of moving dielectrics	243
§58. The dispersion of the dielectric permeability	247
§59. The dielectric permeability at very high frequencies	251
§60. The dispersion of the magnetic permeability	251
§61. The field energy in dispersive media	253
§62. The relation between the real and imaginary parts of $\epsilon(\omega)$	256
§63. A plane wave of a single frequency	263
§64. Transparent media	266
X. THE PROPAGATION OF ELECTROMAGNETIC WAVES	
§65. Geometrical optics	269
§66. Reflection and refraction of electromagnetic waves	272
§67. The surface impedance of metals	279

	<i>Page</i>
§68. The propagation of waves in an inhomogeneous medium	284
§69. The reciprocity principle	288
§70. Electromagnetic oscillations in hollow resonators	290
§71. The propagation of electromagnetic waves in waveguides	293
§72. The scattering of electromagnetic waves by small particles	299
§73. The absorption of electromagnetic waves by small particles	303
§74. Diffraction by a wedge	304
§75. Diffraction by a plane screen	308

XI. ELECTROMAGNETIC WAVES IN ANISOTROPIC MEDIA

§76. The dielectric permeability of crystals	313
§77. A plane wave in an anisotropic medium	315
§78. Optical properties of uniaxial crystals	321
§79. Biaxial crystals	324
§80. Double refraction in an electric field	329
§81. Mechanical-optical effects	330
§82. Magnetic-optical effects	331
§83. Natural optical activity	337

XII. THE PASSAGE OF FAST PARTICLES THROUGH MATTER

§84. Ionisation losses by fast particles in matter: the non-relativistic case	344
§85. Ionisation losses by fast particles in matter: the relativistic case	349
§86. Cherenkov radiation	357

XIII. ELECTROMAGNETIC FLUCTUATIONS

§87. Current fluctuations in linear circuits	360
§88. Electromagnetic field fluctuations	361
§89. Black-body radiation in a transparent medium	367
§90. Forces of molecular attraction between solid bodies	368

XIV. SCATTERING OF ELECTROMAGNETIC WAVES

§91. The general theory of scattering in isotropic media	377
§92. The principle of detailed balancing applied to scattering	383
§93. Scattering with small change of frequency	385
§94. Rayleigh scattering in gases and liquids	387
§95. Critical opalescence	393
§96. Scattering in amorphous solids	395

XV. DIFFRACTION OF X-RAYS IN CRYSTALS

§97. The general theory of X-ray diffraction	398
§98. The integral intensity	404
§99. Diffuse thermal scattering of X-rays	407
Appendix	410
Index	413
