Table of Contents

Preface to the First Edition vii
Preface to the Second Edition ix

PART I. FUNDAMENTALS 1
1.1. Basic Concepts and Definitions 3
1.1.1. Historical Development of the Stability Concept . 3
1.1.2. Common Characteristics of Modern Stability Definitions 5
1.2. Sensitivity Equations and Variational Equations 21
Exercises 1.1 and 1.2 22
1.3. Linear Variational Equations 24
1.3.1. Linear Variational Equations with Constant Coefficients 24
1.3.2. Linear Variational Equations with Variable Coefficients 42
1.3.3. Linear Variational Equations with Periodic Coefficients 48
Exercises 1.3 59
1.4. Investigations in Phase Space 61
1.4.1. Stationary Points 64
1.4.2. Limit Cycles 68
Exercises 1.4 74
1.5. The Direct Method of Lyapunov 77
1.5.1. The Stability Definition of Lyapunov 77
1.5.2. Lyapunov Functions 78
1.5.3. Stability and Instability Theorems of Lyapunov .. 79
Exercises 1.5 86
1.6. The Energy Method 89
1.6.1. Conservative, Scleronomic Systems 89

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

1.6.2. Non-autonomous, Non-conservative Systems 93
Exercises 1.6 105
1.7. Mathematical Approximation Methods 106
1.7.1. Isocline Method 106
1.7.2. Methods of Small Oscillations 107
1.7.3. Variation of Constants 107
1.7.4. Perturbation Method 110
1.7.5. The Methods of Galerkin and Ritz 120
1.7.6. The Harmonic Balance Method 135
Exercises 1.7 140

PART II. APPLICATION OF STABILITY THEORY TO SELECTED PROBLEMS OF MECHANICS 143
2.1. Celestial Mechanics Problems 145
2.1.1. Stability of Central Force Motion 145
2.1.2. Stability Investigations of the Three-body Problem 149
Exercises 2.1 158
2.2. Problems of the Mechanics of Rigid Bodies and of Systems 159
2.2.1. Stability of Vibrations 159
2.2.2. Stability of Control Systems 167
2.2.3. Stability of the Gyroscope 174
2.2.4. Stability of Aircraft, Rockets, Satellites 180
Exercises 2.2 194
2.3. Problems of Elastomechanics 196
2.3.1. Stability Criteria of Elastostatics 197
2.3.2. Application of General Methods of Elastic Systems with Time-independent Parameters and Forces ... 200
2.3.3. Conservative Stability Problems and the Application of the Classical Energy Method 203
2.3.4. Outline of an Algebraic Theory 214
2.3.5. Examples for the Algebraic Approach to Elastostatic Stability Problems 249
2.3.6. Nonconservative Stability Problems and the Application of an Extended Version of the Energy Method 271
2.3.7. Lyapunov Stability of Continuous Elastic Systems 305
2.3.8. Problems of Elastokinetics 337
Exercises 2.3 348
