| | *Introduction to the Second Edition* | | *page* 1 |
| | *From the Introduction to the First Edition* | | 2 |
| **1** | **Basic Results on Algebraic Groups** | | 5 |
| | 1.1 | Basic Results on Algebraic Groups | 5 |
| | 1.2 | Diagonalisable Groups, Tori, $X(\mathbf{T}), Y(\mathbf{T})$ | 8 |
| | 1.3 | Solvable Groups, Borel Subgroups | 11 |
| | 1.4 | Unipotent Groups, Radical, Reductive and Semi-Simple Groups | 13 |
| | 1.5 | Examples of Reductive Groups | 15 |
| **2** | **Structure Theorems for Reductive Groups** | | 19 |
| | 2.1 | Coxeter Groups | 19 |
| | 2.2 | Finite Root Systems | 24 |
| | 2.3 | Structure of Reductive Groups | 29 |
| | 2.4 | Root Data, Isogenies, Presentation of $\mathbf{G}$ | 35 |
| **3** | **$(B,N)$-Pairs; Parabolic, Levi, and Reductive Subgroups; Centralisers of Semi-Simple Elements** | | 39 |
| | 3.1 | $(B,N)$-Pairs | 39 |
| | 3.2 | Parabolic Subgroups of Coxeter Groups and of $(B,N)$-Pairs | 42 |
| | 3.3 | Closed Subsets of a Crystallographic Root System | 45 |
| | 3.4 | Parabolic Subgroups and Levi Subgroups | 51 |
| | 3.5 | Centralisers of Semi-Simple Elements | 56 |

Digne, François
Representations of finite groups of Lie Type

digitalisiert durch:
IDS Basel Bern

| | | |
|---|---|---|
| **4** | **Rationality, the Frobenius Endomorphism, the Lang–Steinberg Theorem** | 59 |
| | 4.1 $k_0$-Varieties, Frobenius Endomorphisms | 59 |
| | 4.2 The Lang–Steinberg Theorem; Galois Cohomology | 63 |
| | 4.3 Classification of Finite Groups of Lie Type | 70 |
| | 4.4 The Relative $(B,N)$-Pair | 75 |
| **5** | **Harish-Chandra Theory** | 79 |
| | 5.1 Harish-Chandra Induction and Restriction | 79 |
| | 5.2 The Mackey Formula | 83 |
| | 5.3 Harish-Chandra Theory | 86 |
| **6** | **Iwahori–Hecke Algebras** | 91 |
| | 6.1 Endomorphism Algebras | 91 |
| | 6.2 Iwahori–Hecke Algebras | 97 |
| | 6.3 Schur Elements and Generic Degrees | 104 |
| | 6.4 The Example of $G_2$ | 108 |
| **7** | **The Duality Functor and the Steinberg Character** | 113 |
| | 7.1 $F$-rank | 113 |
| | 7.2 The Duality Functor | 116 |
| | 7.3 Restriction to Centralisers of Semi-Simple Elements | 123 |
| | 7.4 The Steinberg Character | 126 |
| **8** | **$\ell$-Adic Cohomology** | 130 |
| | 8.1 $\ell$-Adic Cohomology | 130 |
| **9** | **Deligne–Lusztig Induction: The Mackey Formula** | 137 |
| | 9.1 Deligne–Lusztig Induction | 137 |
| | 9.2 Mackey Formula for Lusztig Functors | 140 |
| | 9.3 Consequences: Scalar Products | 146 |
| **10** | **The Character Formula and Other Results on Deligne–Lusztig Induction** | 148 |
| | 10.1 The Character Formula | 148 |
| | 10.2 Uniform Functions | 153 |
| | 10.3 The Characteristic Function of a Semi-Simple Class | 157 |
| **11** | **Geometric Conjugacy and the Lusztig Series** | 161 |
| | 11.1 Geometric Conjugacy | 161 |
| | 11.2 More on Centralisers of Semi-Simple Elements | 167 |
| | 11.3 The Lusztig Series | 170 |

11.4 Lusztig's Jordan Decomposition of Characters: The Levi Case 175
11.5 Lusztig's Jordan Decomposition of Characters: The General Case 183
11.6 More about Unipotent Characters 188
11.7 The Irreducible Characters of $\mathbf{GL}_n^F$ and $\mathbf{U}_n^F$ 191

**12 Regular Elements; Gelfand–Graev Representations; Regular and Semi-Simple Characters** 196
12.1 Regular Elements 196
12.2 Regular Unipotent Elements 201
12.3 Gelfand–Graev Representations 207
12.4 Regular and Semi-Simple Characters 214
12.5 The Character Table of $\mathbf{SL}_2(\mathbb{F}_q)$ 220

**13 Green Functions** 225
13.1 Invariants 225
13.2 Green Functions and the Springer Correspondence 231
13.3 The Lusztig–Shoji Algorithm 236

**14 The Decomposition of Deligne–Lusztig Characters** 242
14.1 Lusztig Families and Special Unipotent Classes 242
14.2 Split Groups 244
14.3 Twisted Groups 247
