<b>PREFACE</b>	v
<b>LIST OF CONTRIBUTORS TO VOLUME B</b>	vii
<b>CONTENTS</b>	ix
<b>CHAPTER 1 FINITE AUTOMATA</b>	1
<i>D. Perrin</i>	
1. Introduction	3
2. Finite automata and recognizable sets	4
3. Rational expressions	11
4. Kleene's theorem	14
5. Star-height	19
6. Star-free sets	21
7. Special automata	29
8. Recognizable sets of numbers	35
9. Notes	45
Acknowledgment	52
References	53
<b>CHAPTER 2 CONTEXT-FREE LANGUAGES</b>	59
<i>J. Berstel and L. Boasson</i>	
Introduction	61
1. Languages	62
2. Iteration	72
3. Looking for nongenerators	82
4. Context-free groups	95
Acknowledgment	100
References	100

<b>CHAPTER 3 FORMAL LANGUAGES AND POWER SERIES</b>	<b>103</b>
<i>A. Salomaa</i>	
Prelude	105
1. Preliminaries	105
2. Rewriting systems and grammars	109
3. Post canonical systems	113
4. Markov algorithms	114
5. Parallel rewriting systems	116
6. Morphisms and languages	119
7. Rational power series	123
8. Algebraic power series	126
9. What power series do for you	129
10. Final comments	131
References	131
<b>CHAPTER 4 AUTOMATA ON INFINITE OBJECTS</b>	<b>133</b>
<i>W. Thomas</i>	
Introduction	135
<b>Part I. Automata on infinite words</b>	
Notation	136
1. Büchi automata	136
2. Congruences and complementation	139
3. The sequential calculus	143
4. Determinism and McNaughton's Theorem	147
5. Acceptance conditions and Borel classes	152
6. Star-free $\omega$ -languages and temporal logic	156
7. Context-free $\omega$ -languages	161
<b>Part II. Automata on infinite trees</b>	
Notation	165
8. Tree automata	167
9. Emptiness problem and regular trees	170
10. Complementation and determinacy of games	173
11. Monadic tree theory and decidability results	178
12. Classifications of Rabin recognizable sets	184
Acknowledgment	186
References	186
<b>CHAPTER 5 GRAPH REWRITING: AN ALGEBRAIC AND LOGIC APPROACH</b>	<b>193</b>
<i>B. Courcelle</i>	
Introduction	195
1. Logical languages and graph properties	196
2. Graph operations and graph expressions	203
3. Context-free sets of hypergraphs	211
4. Logical properties of context-free sets of hypergraphs	215
5. Sets of finite graphs defined by forbidden minors	222

6. Complexity issues	226
7. Infinite hypergraphs	229
8. Guide to the literature	235
Acknowledgment	238
References	239
<b>CHAPTER 6 REWRITE SYSTEMS</b>	<b>243</b>
<i>N. Dershowitz and J.-P. Jouannaud</i>	
1. Introduction	245
2. Syntax	248
3. Semantics	260
4. Church–Rosser properties	266
5. Termination	269
6. Satisfiability	279
7. Critical pairs	285
8. Completion	292
9. Extensions	305
Acknowledgment	309
References	309
<b>CHAPTER 7 FUNCTIONAL PROGRAMMING AND LAMBDA CALCULUS</b>	<b>321</b>
<i>H.P. Barendregt</i>	
1. The functional computation model	323
2. Lambda calculus	325
3. Semantics	337
4. Extending the language	347
5. The theory of combinators and implementation issues	355
Acknowledgment	360
References	360
<b>CHAPTER 8 TYPE SYSTEMS FOR PROGRAMMING LANGUAGES</b>	<b>365</b>
<i>J.C. Mitchell</i>	
1. Introduction	367
2. Typed lambda calculus with function types	370
3. Logical relations	415
4. Introduction to polymorphism	431
Acknowledgment	452
Bibliography	453
<b>CHAPTER 9 RECURSIVE APPLICATIVE PROGRAM SCHEMES</b>	<b>459</b>
<i>B. Courcelle</i>	
Introduction	461
1. Preliminary examples	461
2. Basic definitions	463
3. Operational semantics in discrete interpretations	466
4. Operational semantics in continuous interpretations	471
5. Classes of interpretations	475

6. Least fixed point semantics	481
7. Transformations of program schemes	485
8. Historical notes, other types of program schemes and guide to literature	488
Acknowledgment	490
References	490
<b>CHAPTER 10 LOGIC PROGRAMMING</b>	<b>493</b>
<i>K.R. Apt</i>	
1. Introduction	495
2. Syntax and proof theory	496
3. Semantics	511
4. Computability	523
5. Negative information	531
6. General goals	547
7. Stratified programs	555
8. Related topics	566
Appendix	569
Note	570
Acknowledgment	570
References	571
<b>CHAPTER 11 DENOTATIONAL SEMANTICS</b>	<b>575</b>
<i>P.D. Mosses</i>	
1. Introduction	577
2. Syntax	578
3. Semantics	585
4. Domains	589
5. Techniques	596
6. Bibliographical notes	623
References	629
<b>CHAPTER 12 SEMANTIC DOMAINS</b>	<b>633</b>
<i>C.A. Gunter and D.S. Scott</i>	
1. Introduction	635
2. Recursive definitions of functions	636
3. Effectively presented domains	641
4. Operators and functions	644
5. Powerdomains	653
6. Bifinite domains	660
7. Recursive definitions of domains	663
References	674
<b>CHAPTER 13 ALGEBRAIC SPECIFICATION</b>	<b>675</b>
<i>M. Wirsing</i>	
1. Introduction	677
2. Abstract data types	679

3. Algebraic specifications	690
4. Simple specifications	712
5. Specifications with hidden symbols and constructors	718
6. Structured specifications	737
7. Parameterized specifications	752
8. Implementation	759
9. Specification languages	770
Acknowledgment	780
References	780
<b>CHAPTER 14 LOGICS OF PROGRAMS</b>	<b>789</b>
<i>D. Kozen and J. Tiuryn</i>	
1. Introduction	791
2. Propositional Dynamic Logic	793
3. First-order Dynamic Logic	811
4. Other approaches	830
Acknowledgment	834
References	834
<b>CHAPTER 15 METHODS AND LOGICS FOR PROVING PROGRAMS</b>	<b>841</b>
<i>P. Cousot</i>	
1. Introduction	843
2. Logical, set- and order-theoretic notations	849
3. Syntax and semantics of the programming language	851
4. Partial correctness of a command	858
5. Floyd–Naur partial correctness proof method and some equivalent variants	859
6. Liveness proof methods	875
7. Hoare logic	883
8. Complements to Hoare logic	931
References	978
<b>CHAPTER 16 TEMPORAL AND MODAL LOGIC</b>	<b>995</b>
<i>E.A. Emerson</i>	
1. Introduction	997
2. Classification of temporal logics	998
3. The technical framework of Linear Temporal Logic	1000
4. The technical framework of Branching Temporal Logic	1011
5. Concurrent computation: a framework	1017
6. Theoretical aspects of Temporal Logic	1021
7. The application of Temporal Logic to program reasoning	1048
8. Other modal and temporal logics in computer science	1064
Acknowledgment	1067
References	1067

<b>CHAPTER 17 ELEMENTS OF RELATIONAL DATABASE THEORY</b>	<b>1073</b>
<i>P.C. Kanellakis</i>	
1. Introduction	1075
2. The relational data model	1079
3. Dependencies and database scheme design	1112
4. Queries and database logic programs	1121
5. Discussion: other issues in relational database theory	1140
6. Conclusion	1144
Acknowledgment	1144
References	1144
<b>CHAPTER 18 DISTRIBUTED COMPUTING: MODELS AND METHODS</b>	<b>1157</b>
<i>L. Lamport and N. Lynch</i>	
1. What is distributed computing	1159
2. Models of distributed systems	1160
3. Reasoning about distributed algorithms	1167
4. Some typical distributed algorithms	1178
References	1196
<b>CHAPTER 19 OPERATIONAL AND ALGEBRAIC SEMANTICS OF CONCURRENT PROCESSES</b>	<b>1201</b>
<i>R. Milner</i>	
1. Introduction	1203
2. The basic language	1206
3. Strong congruence of processes	1215
4. Observation congruence of processes	1223
5. Analysis of bisimulation equivalences	1234
6. Confluent processes	1238
7. Sources	1240
Note added in proof	1241
References	1241
<b>SUBJECT INDEX</b>	<b>1243</b>
