

Contents

1 Ancient Wisdom and Natural Philosophers	1
1.1 The Universe in Mythology: Enlightenment by the Laws of Nature	3
1.1.1 Marduk, Patron Deity of Babylon	4
1.1.2 Atum, the Great Egyptian God	6
1.1.3 Jehovah, God of the Hebrews	7
1.1.4 Greek Pantheon	7
1.2 Rise of Empires	9
1.2.1 Assyrian Empire	9
1.2.2 Persian Empire	10
1.2.3 Macedonian Empire	12
1.2.4 Conquests of Alexandria the Great	13
1.3 The Great Library of Alexandria	16
1.4 The Hellenistic Civilization	19
1.5 Natural Philosopher 1: Thales	21
1.6 Natural Philosopher 2: Pythagoras	28
1.7 Natural Philosopher 3: Euclid	33
1.8 Natural Philosopher 4: Archimedes	36
1.9 Natural Philosopher 5: Aristotle	44
1.10 Aristotle's Universe	47
Appendix 1.1: The Catapult of Thales	51
Appendix 1.2: Proofs of the Pythagorean Theorem	54

Appendix 1.3: Pythagoras' Vibrating String: Length and Harmony	55
Appendix 1.4: Computing Archimedes' π Using Integration	57
2 The Blooming Greek Astronomy	61
2.1 Elements that Make up Our Universe	62
2.2 Astronomical Observations: Navigation, Divination and Agriculture	66
2.3 Observing the Sun: Gnomon	69
2.4 Observing the Moon: Calendars	71
2.5 The Maps and Shape of the Earth	72
2.6 Estimating the Distances to the Sun and the Moon	75
2.7 Precession of the Equinoxes	79
2.8 The Elusive Cosmological Model	82
2.8.1 Geocentric Model with Concentric Celestial Spheres	83
2.8.2 Heliocentric Model with Concentric Orbits	86
2.8.3 The Deferent-and-Epicycle Model	87
2.9 Alexandria as a Flourishing Center for Learning	89
2.10 Ptolemaic Astronomy	92
2.11 <i>The Almagest</i> : A Great Astronomical Treatise	97
Appendix 2.1: Principle of Minimum Energy: Cases and Proofs	99
Appendix 2.2: Derivation of Equations for Planetary Retrograde Motion	102
3 The Tumultuous Astronomical Revolution	107
3.1 Science of Medieval Europe	108
3.1.1 Destruction and Redemption of Empires	108
3.1.2 Science in the Language of Arabic	111
3.1.3 Science in the Language of Latin	113
3.1.4 Universities of Medieval Europe	114
3.1.5 Student Activism at the Sorbonne: Aristotelian Debates	116
3.1.6 Emergence of Kinematics: Mathematics at Oxford	119
3.1.7 The Printing Press Facilitates Knowledge Preservation	121
3.1.8 Harbinger of the Astronomical Revolution	123

3.2	Copernicus: Pioneer of the Scientific Revolution	125
3.2.1	Rise of Neoplatonism	128
3.2.2	Heliocentrism: <i>Little Commentary</i> and <i>on the Revolutions of the Heavenly Spheres</i>	130
3.2.3	Modern Proofs of the Heliocentric Theory	133
3.2.4	How <i>on the Revolutions</i> Was Published: Inner Struggles	136
3.2.5	Tycho Brahe, the Noble Astronomical Observer	140
3.3	Kepler: The First Mathematical Physicist	143
3.3.1	Unifying Astronomy and Astrology: Cosmological Model	146
3.3.2	Discarding Yesterday's Model and Focusing on Mars Data	148
3.3.3	Confirming the Law of Areas Using Earth Data	151
3.3.4	First Two Laws of Planetary Motion: Modern Derivations	153
3.3.5	Discovering the Third Law	159
3.3.6	Giants of the Scientific World	162
3.4	Galilei: Founder of Experimental Physics	165
3.4.1	Research at University: First Attempt at Kinematics	167
3.4.2	First Astronomical Telescope in History	170
3.4.3	<i>Sidereus Nuncius</i> : Jupiter's Moons	172
3.4.4	Return to Florence: First Trial by the Roman Inquisition	175
3.4.5	Galilei's <i>Dialogue Concerning the Two Chief World Systems</i> : The Work that Proved Fateful	178
3.4.6	Last Judgment	180
3.4.7	Persecution of Science by Religion	182
3.4.8	Relationship with Kepler	184
3.4.9	Accomplishments in Kinematics	185
3.4.10	Father of Experimental Physics	188
Appendix 3.1:	Indirect Evidence of the Earth's Rotation	191
Appendix 3.2:	Principles behind Galilei's Telescope Designs	199
Appendix 3.3:	The Work of Scientific Revolutionaries	201
4	The Well-Ordered Newtonian Mechanics	205
4.1	Teenage Prodigy	207

4.2	Early Research	209
4.2.1	Optics	209
4.2.2	Mathematics	211
4.2.3	Universal Gravity	213
4.3	Contemporary Research on Solar System and Gravity	216
4.3.1	Cassini's Calculation of the Radius of Earth's Revolving Orbit	217
4.3.2	Measuring Earth's Gravity	218
4.4	Hidden Discovery	221
4.5	Unearthing the Buried Law of Universal Gravitation: Halley's Comet	223
4.6	Examining Laws of Planetary Motion with Universal Gravitation	228
4.6.1	Kepler's First Law of Planetary Motion: Elliptical Orbits	228
4.6.2	Kepler's Second Law of Planetary Motion: Equal Areas	230
4.6.3	Kepler's Third Law of Planetary Motion: Orbital Periods	231
4.7	<i>Philosophiæ Naturalis Principia Mathematica</i> : A Scientific Masterpiece	232
4.8	<i>The Principia</i> : Written by Standing on the Shoulder of Giants	237
4.9	Exploring Long-Standing Mysteries with the Law of Universal Gravitation	241
4.9.1	Example 1: Precession Speed of the Earth's Axis	242
4.9.2	Example 2: Marine Tidal Movement	243
4.9.3	Example 3: Captured Rotation—The Phenomenon Left Out by Newton	245
4.10	Bitter Controversy: Who Invented Calculus?	249
4.11	Malicious Criticism: Academia's Corrupted Norm	251
4.12	A Great Theory: Needs Rigorous Examinations	254
4.13	Cavendish's Measurement of Gravitational Constant	259
4.14	<i>The Principia</i> : An Abstruse Masterpiece	263
4.15	Newton—A Scientific Giant Almost Impossible to Emulate	265

4.16	Life Summary: Awkward in Society But Sharp in Science	269
Appendix 4.1:	Calculating the Period of Earth's Precession with the Law of Universal Gravity	271
Appendix 4.2:	Measuring the Influence of Moon's Gravity on Earth Tides with the Law of Universal Gravitation	277
Appendix 4.3:	Exploring the Requirement for Tidal Locking in the Earth-Moon System	282
Appendix 4.4:	When Will We See Earth's Rotation and Moon's Revolution Synchronized?	286
Appendix 4.5:	How the Theory of Pendulum and Its Period Change When in Equatorial and Polar Regions	295
Appendix 4.6:	Calculating the Difference Between Earth's Equatorial and Polar Radiuses	298
Appendix 4.7:	Feynman's Geometrical Approach of Proving Planetary Orbits to Be Elliptic	302
5	Special Relativity, Where Time and Space Are Merged	307
5.1	Lonely, Isolated Teenager	308
5.2	Electromagnetic Field: Faraday's Law of Induction	311
5.3	Maxwell's Theory of Electromagnetic Waves	319
5.4	The Miracle Year: Five Groundbreaking Papers	330
5.4.1	Paper 1: A New Determination of Molecular Dimensions	332
5.4.2	Paper 2: Brownian Motion	332
5.4.3	Paper 3: Special Relativity	334
5.4.4	Paper 4: Mass-Energy Equivalence	335
5.4.5	Paper 5: Photoelectric Effect	335
5.5	Foundation of Relativity: Light Speed Over Ether	336
5.5.1	What Is Light?	337
5.5.2	Does Ether Really Exist?	339
5.6	Integration of Space and Time	342
5.7	Lorentz Transformations: Mathematical Model for Special Relativity	350
5.8	Time Dilation and Length Contraction	355
5.9	Special Relativity Concept 1: Invariance of Spacetime Distance	367
5.10	Special Relativity Concept 2: Invariance of Causality	373

5.11	Special Relativity Concept 3: Invariance of Physical Quantities	376
5.11.1	Momentum Conservation	377
5.11.2	Energy Conservation	383
5.12	The Wonder of Special Relativity: Mass-Energy Formula	386
5.13	Far-Reaching Influence of Relativity Theory Applied to Engineering: Birth of Nuclear Bombs	394
5.13.1	Chain Reaction of Nuclear Fission	395
5.13.2	The Critical Mass of Nuclear Fuel	396
5.13.3	Calculating Critical Mass	397
5.13.4	Ways to Lower Critical Mass	399
5.13.5	Power of Nuclear Bombs	400
5.14	Internal Energy of Matter: More Powerful Within Than Outside	403
Appendix 5.1:	Small Particles That Form the Rings of Saturn	405
Appendix 5.2:	Reflecting Mechanism of Electromagnetic Waves in the Ionosphere	408
Appendix 5.3:	Measuring the Radius of Table Sugar Molecules	412
Appendix 5.4:	Average Distance Traveled by Pollen Particles in Liquids through Random Motion	413
Appendix 5.5:	How the Equivalent Mass of an Electron Changes with Its Direction of Motion in an Electric Field	417
Appendix 5.6:	Rømer's Light Speed Experiment	419
Appendix 5.7:	Light Aberration Caused by Earth's Revolution	420
6	General Relativity, Where Time and Space Are Curved	423
6.1	Concept Clarification: How Time and Space Work Under Gravitational Impact	424
6.1.1	Vast Range of Relative Time and Space	425
6.1.2	Gravity and Weak Equivalence Principle	427
6.1.3	Physical Phenomena in Reference Frame with Constant Proper Acceleration	429
6.1.4	Deeper Dive Into Principle of Equivalence	433
6.1.5	Mathematical Model and Spacetime Geometry Describing Reference Frame with Constant Proper Acceleration	437
6.2	Riemannian Manifold: Geometry of Curved Time and Space	440
6.2.1	Definition of Curved Time and Space	442
6.2.2	Basis Vector and Metric	447

6.2.3	Parallel Transport of Vector	453
6.2.4	Riemann Curvature Tensor	457
6.3	Einstein's Field Equations	459
6.3.1	Review and Integration—How Newton's Law of Universal Gravitation and Curved Spacetime are Related	461
6.3.2	Geodesic: Spacetime Path of Freely Moving Object	462
6.3.3	Energy-Momentum Tensor	466
6.3.4	Ricci Tensor	470
6.3.5	Frame Transformation and Tensor Definition	472
6.3.6	Covariant, Contravariant & Mixed Tensors	477
6.3.7	Local Inertial Frame and Strong Equivalence Principle	483
6.3.8	Covariant Derivative	485
6.3.9	November of 1915—Birth of Field Equation	488
6.3.10	Field Equation Regulating Energy-Momentum Conservation	490
6.4	Verification and Application of General Relativity	494
6.4.1	Schwarzschild Metric	495
6.4.2	Light Bending in Gravitational Field	498
6.4.3	Precession of Mercury's Perihelion	504
6.4.4	Global Positioning System	510
6.4.5	Geodetic Precession and Frame Dragging	513
6.4.6	Gravitational Wave	525
6.5	Summary and Review of General Relativity	530
6.6	Einstein's Distraught, Lonely Late Life	535
Appendix 6.1: Transformation between Reference Frame with Constant Proper Acceleration and Inertial Frame		540
Appendix 6.2: Derivation of the Geodesic Equation		546
7	The Course of Scientific Progress: Spanning Three Thousand Years of Ideological Conflict and Evolution	553
7.1	The Evolution of Natural Philosophy: A Victory for the Geocentric Model	554
7.2	The Astronomical Revolution of the Middle Ages: The Heliocentric System Snatches Victory from the Jaws of Defeat	556
7.3	Ruling Physical Sciences by Law: The Law of Gravity	559

7.4	Perceiving the Universe Through Spacetime Relativity: A Great Correction in Our Understanding of Physics	563
7.5	Newton and Einstein: Divergent Streams of Thought Converge at the Same Destination	564
7.6	A Battle Between Rationality and Sensitivity: A Love-Hate Relationship Between Science and Religion	566
7.7	Human Manipulation: Struggles for Survival and Disputes Over Personal Gain	569
7.8	What Is Science? the Question with an Ever-Changing Answer	572
7.9	A Brave New World: Facing the Anxieties of the Future	576
