I Dynamical Systems 1

1 Deterministic Linear Systems 3

1.1 Some Basic Concepts 3

1.2 Scalar First-Order Linear Difference Equations 6

1.3 Lag Operators 10

1.4 Scalar Second-Order Linear Difference Equations 11

1.5 Planar Linear Systems 13

1.5.1 Distinct Real Eigenvalues 14

1.5.2 Repeated Real Eigenvalues 15

1.5.3 Complex Eigenvalues 16

1.6 Phase Diagrams 16

1.7 Higher-Dimensional Linear Systems 18

1.7.1 Nonsingular Systems 20

1.7.2 Singular Systems 26

1.8 Exercises 29

2 Deterministic Nonlinear Systems 31

2.1 Linear Approximation 31

2.2 Local Stability 33

2.3 Lyapunov Function 38

2.4 Cycles and Chaos 41

2.4.1 Periodic Solutions 41

2.4.2 Bifurcations 43

2.4.3 Chaos 49

2.5	Numerical Solutions Using Dynare	55
2.6	Exercises	62
3	Stochastic Difference Equations	65
3.1	First-Order Linear Systems	65
3.2	Scalar Linear Rational Expectations Models	67
3.2.1	Lag Operators	67
3.2.2	Method of Undetermined Coefficients	70
3.3	Multivariate Linear Rational Expectations Models	71
3.3.1	Blanchard–Kahn Method	71
3.3.2	Klein Method	73
3.3.3	Sims Method	75
3.4	Nonlinear Rational Expectations Models	81
3.5	Numerical Solutions Using Dynare	85
3.6	Indeterminacy and Sunspot Equilibria	94
3.7	Pruning Nonlinear Solutions	96
3.8	Exercises	99
4	Markov Processes	103
4.1	Markov Chains	104
4.1.1	Classification of States	108
4.1.2	Stationary Distribution: Finite State Space	111
4.1.3	Countable-State Markov Chains	118
4.2	General Markov Processes	128
4.3	Convergence	132
4.3.1	Strong Convergence	132
4.3.2	Weak Convergence	137
4.4	Markov Chain Monte Carlo Algorithms	140
4.5	Exercises	143
5	Ergodic Theory and Stationary Processes	147
5.1	Ergodic Theorem	147
5.2	Application to Stationary Processes	152
5.3	Application to Stationary Markov Processes	159
5.4	Exercises	164
II	Dynamic Optimization	165
6	Markov Decision Process Model	167
6.1	Model Setup	167

6.2	Examples	173
6.2.1	Discrete Choice	173
6.2.2	Optimal Stopping	174
6.2.3	Bandit Model	177
6.2.4	Optimal Control	180
6.3	Exercises	181
7	Finite-Horizon Dynamic Programming	183
7.1	A Motivating Example	183
7.2	Measurability Problem	187
7.3	Principle of Optimality	189
7.4	Optimal Control	196
7.5	Maximum Principle	202
7.6	Applications	206
7.6.1	Secretary Problem	206
7.6.2	A Consumption-Saving Problem	207
7.7	Exercises	209
8	Infinite-Horizon Dynamic Programming	211
8.1	Principle of Optimality	211
8.2	Bounded Rewards	220
8.3	Unbounded Rewards	222
8.3.1	Negative Dynamic Programming	222
8.3.2	Weighted Contraction Approach	225
8.4	Optimal Control	229
8.5	The Maximum Principle and Transversality Conditions	233
8.6	Euler Equations and Transversality Conditions	236
8.7	Exercises	243
9	Applications	247
9.1	Option Exercise	247
9.2	Discrete Choice	250
9.3	Multi-Armed Bandit	252
9.4	Consumption and Saving	258
9.4.1	Deterministic Income	261
9.4.2	Stochastic Income	268
9.5	Consumption/Portfolio Choice	276
9.6	Inventory	278
9.6.1	Finite-Horizon Problem	280
9.6.2	Infinite-Horizon Problem	284

9.7	Investment	289
9.7.1	Neoclassical Theory	289
9.7.2	Q Theory	291
9.7.3	Augmented Adjustment Costs	293
9.8	Exercises	299
10	Linear-Quadratic Models	301
10.1	Controlled Linear State-Space System	301
10.2	Finite-Horizon Problems	305
10.3	Infinite-Horizon Limits	308
10.3.1	Value Function Iteration	312
10.3.2	Policy Improvement Algorithm	312
10.3.3	Lagrange Method	313
10.4	Optimal Policy under Commitment	314
10.5	Optimal Discretionary Policy	320
10.6	Robust Control	324
10.6.1	Belief Distortions and Entropy	324
10.6.2	Two Robust Control Problems	326
10.6.3	Recursive Formulation	327
10.6.4	Linear-Quadratic Model with Gaussian Disturbances	328
10.6.5	Relative Entropy and Normal Distributions	330
10.6.6	Modified Certainty Equivalence Principle	330
10.7	Exercises	331
11	Control under Partial Information	335
11.1	Filters	335
11.1.1	Kalman Filter	335
11.1.2	Smoothing	344
11.1.3	Hidden Markov Chain	344
11.1.4	Hidden Markov-Switching Model	346
11.2	Control Problems	347
11.3	Linear-Quadratic Control	351
11.4	Rational Inattention	353
11.4.1	Information Theory	353
11.4.2	Linear-Quadratic-Gaussian Models	355
11.5	Exercises	358
12	Numerical Methods	361
12.1	Numerical Integration	361
12.1.1	Gaussian Quadrature	361
12.1.2	Multidimensional Quadrature	363

12.2	Discretizing AR(1) Processes	364
12.2.1	Tauchen (1986) Method	364
12.2.2	Tauchen–Hussey (1991) Method	365
12.2.3	Simulating a Markov Chain	366
12.3	Interpolation	367
12.3.1	Orthogonal Polynomials	369
12.3.2	Splines	372
12.3.3	Multidimensional Approximation	375
12.4	Perturbation Methods	377
12.5	Projection Methods	380
12.6	Numerical Dynamic Programming	385
12.6.1	Discrete Approximation Methods	386
12.6.2	Smooth Approximation Methods	388
12.7	Exercises	391
13	Structural Estimation	393
13.1	Generalized Method of Moments	393
13.1.1	Estimation	394
13.1.2	Asymptotic Properties	396
13.1.3	Weighting Matrix and Covariance Matrix Estimation	398
13.1.4	Overidentifying Restrictions	399
13.1.5	Implementation	400
13.1.6	Relation to Other Estimation Methods	401
13.2	Maximum Likelihood	401
13.2.1	Estimation	401
13.2.2	Asymptotic Properties	402
13.2.3	Hypothesis Testing	403
13.3	Simulation-Based Methods	404
13.3.1	Simulated Method of Moments	405
13.3.2	Simulated Maximum Likelihood	407
13.3.3	Indirect Inference	408
13.4	Exercises	411
III	Equilibrium Analysis	413
14	Complete Markets Exchange Economies	415
14.1	Uncertainty, Preferences, and Endowments	415
14.2	Pareto Optimum	416

14.3	Time 0 Trading	417
14.3.1	Equilibrium Computation	419
14.3.2	Two Welfare Theorems	420
14.3.3	Asset Pricing	422
14.4	Sequential Trading	423
14.4.1	Investment Opportunities	423
14.4.2	Ponzi Scheme and Portfolio Constraints	424
14.4.3	Radner Equilibrium	425
14.4.4	Arbitrage and State Prices	426
14.4.5	Complete Markets	428
14.4.6	Equilibrium with Transversality Condition	429
14.4.7	Natural Debt Limit	431
14.5	Equivalence of Equilibria	431
14.6	Asset Price Bubbles	434
14.7	Recursive Formulation	439
14.8	Asset Pricing	440
14.8.1	Capital Asset-Pricing Model	442
14.8.2	Factor-Pricing Model	442
14.8.3	Consumption-Based Capital Asset-Pricing Model	443
14.9	Exercises	445
15	Neoclassical Growth Models	449
15.1	Deterministic Models	449
15.1.1	A Basic Ramsey Model	449
15.1.2	Incorporating Fiscal Policy	458
15.2	A Basic RBC Model	461
15.2.1	Steady State	463
15.2.2	Calibration	463
15.2.3	Log-Linearized System	464
15.2.4	Business Cycle Statistics and Model Results	469
15.2.5	Impact of a Permanent TFP Shock	471
15.2.6	Impact of a Temporary TFP Shock	472
15.2.7	Effects of Persistence and Critiques of the RBC Model	473
15.3	Extensions of the Basic RBC Model	474
15.3.1	Various Utility Functions	474
15.3.2	Capacity Utilization	479
15.3.3	Capital or Investment Adjustment Costs	480
15.3.4	Stochastic Trends	485
15.3.5	Other Sources of Shocks	487
15.4	Exercises	491

16	Bayesian Estimation of DSGE Models Using Dynare	493
16.1	Principles of Bayesian Estimation	494
16.2	Bayesian Estimation of DSGE Models	495
16.2.1	Numerical Solution and State-Space Representation	496
16.2.2	Evaluating the Likelihood Function	497
16.2.3	Computing the Posterior	499
16.2.4	Identification	501
16.2.5	Model Comparison	502
16.2.6	Model Diagnosis: Predictive Checks	502
16.3	An Example	503
16.3.1	Dynare Codes	503
16.3.2	Dynare Output	507
16.3.3	Stochastic Trends	508
16.4	Exercises	509
17	Overlapping Generations Models	511
17.1	Exchange Economies	511
17.1.1	A Special Case and Multiple Equilibria	513
17.1.2	Existence and Efficiency	518
17.2	Production Economies	524
17.2.1	Multiple Equilibria	526
17.2.2	Dynamic Efficiency	529
17.2.3	Altruism, Bequests, and Infinite Horizons	540
17.3	Asset Price Bubbles	542
17.4	Sunspots and Self-Fulfilling Prophecies	546
17.5	Exercises	548
18	Incomplete Markets Models	551
18.1	Production Economies	551
18.1.1	Income Fluctuation Problem	552
18.1.2	Production	553
18.1.3	Stationary Recursive Equilibrium	554
18.1.4	Computation and Implications	555
18.2	Endowment Economies	559
18.2.1	Risk-Free Rate	559
18.2.2	Fiat Money	561
18.2.3	Interest on Currency	561
18.2.4	Seigniorage	564

18.3	Aggregate Shocks	566
18.3.1	Recursive Equilibrium	566
18.3.2	Krusell–Smith Method	567
18.4	Uninsured Idiosyncratic Investment Risk	569
18.5	Exercises	570
19	Search and Matching Models of Unemployment	573
19.1	A Basic DMP Model	574
19.1.1	Steady State	577
19.1.2	Transitional Dynamics	579
19.1.3	Large Firms	581
19.1.4	Efficiency	583
19.2	Cyclical Volatilities of Unemployment and Vacancies	584
19.3	Endogenous Job Destruction	587
19.3.1	Steady State	590
19.3.2	Transitional Dynamics	593
19.4	Unemployment and Business Cycles	593
19.4.1	Households	593
19.4.2	Firms	595
19.4.3	Nash Bargained Wages	597
19.4.4	Equilibrium	598
19.5	Exercises	598
20	Dynamic New Keynesian Models	601
20.1	A Basic DNK Model	601
20.1.1	Households	602
20.1.2	Final Goods Firms	603
20.1.3	Intermediate Goods Firms	604
20.1.4	Central Bank	606
20.1.5	Sticky-Price Equilibrium	607
20.1.6	Flexible-Price Equilibrium	607
20.1.7	Log-Linearized System	608
20.2	Monetary Policy Design	614
20.2.1	Efficient Allocation	614
20.2.2	Quadratic Approximation to Utility	616
20.2.3	Commitment versus Discretion	620
20.3	Fiscal Stimulus	624
20.3.1	A Neoclassical Model	624
20.3.2	Monopolistic Competition	625
20.3.3	A DNK Model	627

20.3.4	Zero-Interest-Rate Lower Bound	630
20.3.5	Duration of Fiscal Stimulus	635
20.3.6	Government Purchases and Welfare	636
20.4	A Medium-Scale DSGE Model	640
20.4.1	Households	641
20.4.2	Firms	644
20.4.3	Monetary and Fiscal Policies	646
20.4.4	Aggregation and Equilibrium	646
20.5	Exercises	647

IV Further Topics 651

21 Recursive Utility 653

21.1	Deterministic Case	654
21.1.1	Koopmans's Utility	654
21.1.2	Construction	656
21.2	Stochastic Case	659
21.2.1	Epstein–Zin Preferences	659
21.2.2	Ambiguity Aversion	665
21.2.3	Temporal Resolution of Uncertainty	673
21.3	Properties of Recursive Utility	675
21.3.1	Concavity	676
21.3.2	Risk Aversion	676
21.3.3	Utility Gradients and Pricing Kernels	677
21.4	Portfolio Choice and Asset Pricing	680
21.4.1	Optimality and Equilibrium	681
21.4.2	Log-Linear Approximation	684
21.4.3	Long-Run Risk	692
21.5	Pareto Optimality	698
21.5.1	Lucas–Stokey Approach	699
21.5.2	Dumas–Uppal–Wang Approach	702
21.6	Exercises	703

22 Dynamic Games 705

22.1	Repeated Games	706
22.1.1	Perfect Monitoring	706
22.1.2	Equilibrium Payoff Set	708
22.1.3	Computation	711
22.1.4	Simple Strategies	712
22.1.5	Imperfect Public Monitoring	713

22.2	Dynamic Stochastic Games	716
22.3	Application: The Great Fish War	718
22.4	Credible Government Policies	720
22.4.1	One-Period Economy	721
22.4.2	Infinitely Repeated Economy	723
22.4.3	Equilibrium Value Set	725
22.4.4	Best and Worst SPE Values	727
22.4.5	Recursive Strategies	729
22.5	Exercises	731
23	Recursive Contracts	733
23.1	Limited Commitment	734
23.1.1	A Dynamic Programming Method	735
23.1.2	A Lagrangian Method	737
23.1.3	An Alternative Characterization	738
23.2	Hidden Action	739
23.3	Hidden Information	745
23.3.1	Characterizations	746
23.3.2	Long-Run Poverty	751
23.4	Exercises	752
	Mathematical Appendixes	755
A	Linear Algebra	757
B	Real and Functional Analysis	763
C	Convex Analysis	771
D	Measure and Probability Theory	779
	References	787
	Matlab Index	811
	Name Index	813
	Subject Index	819
