<i>Contributors</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
1. Color centers in diamond for quantum applications	1
Gergő Thiering and Adam Gali	
1. Introduction	1
2. Vacancy-impurity color centers with inversion symmetry	3
3. Other color centers	21
4. Summary and outlook	24
Acknowledgments	25
References	25
2. Ultrapure homoepitaxial diamond films grown by chemical vapor deposition for quantum device application	37
Tokuyuki Teraji	
1. Introduction	37
2. Making "single defect" diamond crystals	38
3. Mechanism of diamond chemical vapor deposition	40
4. NIMS-type diamond growth system	41
5. Growth of high-quality and high-purity diamond crystals	42
6. Conclusion	53
Acknowledgments	53
References	54
3. Step-edge growth and doping of diamond	57
Norio Tokuda	
1. Introduction	57
2. Growth modes of homoepitaxial diamond films	58
3. Growth of diamond layers with atomically flat diamond (111) surfaces	62
4. Creation of perfectly aligned NV centers in diamonds (111) by step-edge growth	65
5. Conclusions	69
Acknowledgments	69
References	69

4. Nitrogen-vacancy doped CVD diamond for quantum applications: A review	73
Christoph E. Nebel	
1. Introduction	74
2. The growth of single crystalline diamond	77
3. Microwave plasma CVD for quantum grade diamond	82
4. 3D shaping and growth of diamond	95
5. Nitrogen doping	100
6. The NV center	107
7. Nanoscale sensing	114
References	125
5. Charge state control by band engineering	137
Toshiharu Makino, Hiromitsu Kato, Maki Shimizu, Mutsuko Hatano, and Norikazu Mizuochi	
1. Concept of charge state control of NV centers	137
2. Charge state control by n-type diamond	139
3. Charge state control by nin junction	146
4. Charge state control by pin junction	151
5. Summary	155
Acknowledgments	156
References	156
6. High-pressure, high-temperature synthesis and doping of nanodiamonds	161
E.A. Ekimov and M.V. Kondrin	
1. Introduction	161
2. The diamond synthesis from hydrocarbons	166
3. Synthesis and structure of nanodiamonds obtained from halogenated adamantanes	170
4. On the mechanism for the formation of nanodiamonds in the presence of halogens	171
5. Morphology of diamond crystals and growth defects	175
6. Defect's formation energy and HPHT doping of diamond	177
7. Charge state control of color centers in diamond	182
8. Doping of diamonds in hydrogen- and halogen-containing growth systems	187
9. Conclusions	190
Acknowledgments	192
References	192

7. The silicon vacancy center in diamond	201
Jonas Nils Becker and Elke Neu	
1. Introduction	202
2. Creating SiV centers	205
3. SiV centers in nanostructures	209
4. Electronic and optical properties of the SiV ⁻	214
5. The SiV ⁻ as a spin–photon interface	218
6. The SiV ⁰ for quantum information processing	227
7. Conclusion	228
References	228
8. Color centers based on heavy group-IV elements	237
Takayuki Iwasaki	
1. Introduction	237
2. Structure and electronic configuration	238
3. Formation of color centers	239
4. Optical properties	241
5. Spin properties	246
6. Charge state control	250
7. Nanophotonic devices and sensor application	251
8. Concluding remarks	253
References	254
9. Hybrid light collection	257
Niko Nikolay, Florian Böhm, Boaz Lubotzky, Hamza Abudayyeh, Ronen Rapaport, and Oliver Benson	
1. Introduction	257
2. Free-space single-photon collection	258
3. On-chip single-photon collection	265
References	273
10. Dynamic nuclear polarization (DNP) in diamond	277
Jochen Scheuer and Boris Naydenov	
1. Introduction to DNP	277
2. DNP with nitrogen-vacancy (NV) centers in diamond	280
3. Conclusions and outlook	288
References	289
