Preface to the Classics Edition	xiii
---------------------------------	------

Preface to the Second Edition	xv
-------------------------------	----

1 Introduction and Motivation	1
1.1 Preliminary Remarks	1
1.2 Preview on Noncooperative Games	3
1.3 Outline of the Book	12
1.4 Conventions, Notation and Terminology	13

Part I

2 Noncooperative Finite Games: Two-Person Zero-Sum	17
2.1 Introduction	17
2.2 Matrix Games	18
2.3 Computation of Mixed Equilibrium Strategies	29
2.4 Extensive Forms: Single-Act Games	36
2.5 Extensive Games: Multi-Act Games	45
2.6 Zero-Sum Games with Chance Moves	57
2.7 Two Extensions	60
2.7.1 Games with repeated decisions	61
2.7.2 Extensive forms with cycles	63
2.8 Action-Dependent Information Sets	65
2.8.1 Duels	66
2.8.2 A searchlight game	66
2.9 Problems	70
2.10 Notes	75
3 Noncooperative Finite Games: N-Person Nonzero-Sum	77
3.1 Introduction	77
3.2 Bimatrix Games	78
3.3 N -Person Games in Normal Form	88
3.4 Computation of Mixed-Strategy Nash Equilibria in Bimatrix Games	95
3.5 Nash Equilibria of N -Person Games in Extensive Form	97

3.5.1	Single-act games: Pure-strategy Nash equilibria	100
3.5.2	Single-act games: Nash equilibria in behavioral and mixed strategies	116
3.5.3	Multi-act games: Pure-strategy Nash equilibria	118
3.5.4	Multi-act games: Behavioral and mixed equilibrium strategies	126
3.5.5	Other refinements on Nash equilibria	128
3.6	The Stackelberg Equilibrium Solution	131
3.7	Nonzero-Sum Games with Chance Moves	148
3.8	Problems	153
3.9	Notes	159
4	Static Noncooperative Infinite Games	161
4.1	Introduction	161
4.2	ϵ Equilibrium Solutions	162
4.3	Continuous-Kernel Games: Reaction Curves, and Existence and Uniqueness of Nash and Saddle-Point Equilibria	168
4.4	Stackelberg Solution of Continuous-Kernel Games	179
4.5	Consistent Conjectural Variations Equilibrium	186
4.6	Quadratic Games with Applications in Microeconomics	190
4.7	Braess Paradox	203
4.8	Problems	205
4.9	Notes	210

Part II

5	General Formulation of Infinite Dynamic Games	215
5.1	Introduction	215
5.2	Discrete-Time Infinite Dynamic Games	216
5.3	Continuous-Time Infinite Dynamic Games	224
5.4	Mixed and Behavioral Strategies in Infinite Dynamic Games	230
5.5	Tools for One-Person Optimization	233
5.5.1	Dynamic programming for discrete-time systems	233
5.5.2	Dynamic programming for continuous-time systems	236
5.5.3	The minimum principle	241
5.6	Representations of Strategies Along Trajectories, and Time Consistency of Optimal Policies	247
5.7	Viscosity Solutions	255
5.8	Problems	260
5.9	Notes	262
6	Nash and Saddle-Point Equilibria of Infinite Dynamic Games	265
6.1	Introduction	265
6.2	Open-Loop and Feedback Nash and Saddle-Point Equilibria for Dynamic Games in Discrete Time	266

6.2.1	Open-loop Nash equilibria	267
6.2.2	Closed-loop no-memory and feedback Nash equilibria . . .	276
6.2.3	Linear-quadratic games with an infinite number of stages	288
6.3	Informational Properties of Nash Equilibria in Discrete-Time Dynamic Games	292
6.3.1	A three-person dynamic game illustrating informational nonuniqueness	292
6.3.2	General results on informationally nonunique equilibrium solutions	296
6.4	Stochastic Nonzero-Sum Games with Deterministic Information Patterns	303
6.5	Open-Loop and Feedback Nash and Saddle-Point Equilibria of Differential Games	310
6.5.1	Open-loop Nash equilibria	310
6.5.2	Closed-loop no-memory and feedback Nash equilibria . . .	320
6.5.3	Linear-quadratic differential games on an infinite time horizon	333
6.6	Applications in Robust Controller Designs: H^∞ -Optimal Control	342
6.7	Stochastic Differential Games with Deterministic Information Pat- terns	350
6.8	Problems	355
6.9	Notes	361
7	Stackelberg Equilibria of Infinite Dynamic Games	365
7.1	Introduction	365
7.2	Open-Loop Stackelberg Solution of Two-Person Dynamic Games in Discrete Time	366
7.3	Feedback Stackelberg Solution Under CLPS Information Pattern	373
7.4	(Global) Stackelberg Solution Under CLPS Information Pattern	376
7.4.1	An illustrative example (Example 7.1)	376
7.4.2	A second example (Example 7.2): Follower acts twice in the game	382
7.4.3	Linear Stackelberg solution of linear-quadratic dynamic games	385
7.4.4	Incentives (deterministic)	392
7.5	Stochastic Dynamic Games with Deterministic Information Pat- terns	396
7.5.1	(Global) Stackelberg solution	396
7.5.2	Feedback Stackelberg solution	402
7.5.3	Stochastic incentive problems	403
7.6	Stackelberg Solution of Differential Games	407
7.6.1	The open-loop information structure	407
7.6.2	The CLPS information pattern	412
7.7	Problems	418
7.8	Notes	421

8 Pursuit-Evasion Games	423
8.1 Introduction	423
8.2 Necessary and Sufficient Conditions for Saddle-Point Equilibria	424
8.2.1 The Isaacs equation	425
8.2.2 Upper and lower values, and viscosity solutions	432
8.3 Capturability	434
8.4 Singular Surfaces	442
8.5 Solution of a Pursuit-Evasion Game: The Lady in the Lake	448
8.6 An Application in Maritime Collision Avoidance	451
8.7 Role Determination and an Application in Aeronautics	456
8.8 Problems	464
8.9 Notes	467
Appendix A Mathematical Review	471
A.1 Sets	471
A.2 Normed Linear (Vector) Spaces	472
A.3 Matrices	473
A.4 Convex Sets and Functionals	473
A.5 Optimization of Functionals	474
Appendix B Some Notions of Probability Theory	477
B.1 Ingredients of Probability Theory	477
B.2 Random Vectors	478
B.3 Integrals and Expectation	480
B.4 Norms and the Cauchy-Schwarz Inequality	481
Appendix C Fixed Point Theorems	483
Bibliography	485
List of Corollaries, Definitions, Examples, Lemmas, Propositions, Remarks and Theorems	507
Index	515
