

Content

Preface	9
1 The “Ur-project” - main goals	11
2 The Fertile Crescent - cradle of civilisation	13
3 Ur – the site	15
3.1 Location, historic significance, and Trivia	15
3.2 Excavations	16
3.3 The analysed artefacts.....	20
3.3.1 The archaeological context of the sampled copper-based artefacts	20
3.3.1.1 . Uruk	20
3.3.1.2 . Jemdet Nasr/Early Dynastic I.....	20
3.3.1.3 . Early Dynastic III	20
3.3.1.4 . Akkadian	22
3.3.1.5 . Ur III	23
3.3.1.6 . Late Ur III to Isin-Larsa	23
3.3.1.7 . Early Iron Age	23
3.3.1.8 . Without context	23
3.3.2 The archaeological context of the sampled silver artefacts	23
4 Resource procurement and trade routes in 3rd millennium BCE Ur.....	25
5 A comprehensive GIS-based geological, archaeological and archaeometallurgical database	27
6 Geodynamic settings of copper, silver and tin occurrences in the Near and Middle East	31
6.1 Anatolia	31
6.2 Caucasus	33
6.3 Levant and Sinai	34
6.4 Eastern Desert of Egypt.....	34
6.5 Iranian Plateau and Zagros Mountains	34
6.6 <i>Makan</i> - Oman and <i>Dilmun</i> - East coast of Arabian peninsula.....	35
6.7 Central Asia and Himalayas	36
6.7.1 Precambrian to Palaeozoic geodynamics.....	36
6.7.2 Mesozoic ophiolites and volcanic activity	37
6.7.3 Cenozoic Himalayan orogeny associated units	37
6.8 The Indus Valley and Aravalli-Delhi range in NW India	37
7 Methods: Electron microprobe analysis	39
7.1 Requirements and procedure	39
7.2 Limitations	39
7.3 Sample preparation	39
7.4 Electron Microprobe Analysis	39

8 Methods: Mass spectrometry	43
8.1 Requirements and procedure	43
8.2 Sample Preparation	43
8.3 Laserablation	43
8.3.2 Lead Isotopes	45
8.3.2.1 Mass bias correction with Tl (Solution)	46
8.3.2.2 Standard-sample bracketing (Laserablation)	46
8.3.2.3 Matrix correction with the exponential law	46
8.3.3 Copper Isotopes	47
8.3.4 Destructive Laserablation	48
8.4 Wet chemical measurements of Pb and Cu isotopes	48
8.4.1 Wet chemical Pb isotope measurements	48
8.4.2 Wet chemical Cu isotope measurements	49
8.5 Accuracy and precision - Laserablation in comparison with wet chemical measurements.....	49
8.6 Graphics.....	52
9 Beginnings of copper metallurgy.....	53
9.1 The emergence of copper base metal and its alloys.....	53
9.1.1 11th to 9th millennium BCE	53
9.1.2 8th to 7th millennium BCE	53
9.1.3 6th millennium BCE	53
9.1.4 5th to 4th millennium BCE	54
9.1.5 3rd millennium BCE	55
9.2 Copper ores	57
9.2.1 Early unalloyed copper: Native copper versus smelted copper ores from oxidation zones ..	57
9.3 Smelting of copper ores	59
9.3.1 Smelting of oxidic copper ores	59
9.3.2 Smelting of sulphide ores	60
9.3.3 Smelting of arsenical copper	60
9.3.4 Smelting of copper and tin	61
9.4 The "tin problem"	62
10 The copper-based artefacts: Results and discussion	63
10.1 Quantitative analysis	63
10.1.1 Results: electron microprobe analysis	63
10.1.1.1 Differing alloys and metals by their main elements	63
10.1.1.2 Homogeneity of copper-based metal artefacts	64
10.1.2 Discussion: The main elements	65
10.1.2.1 The chemistry of the inclusions	68
10.1.3 Results: trace elements - nanosecond-laserablation-SC-ICP-MS	68
10.1.3.1 The bulk chemical composition of the copper-based artefacts	69
10.1.4 Discussion: Trace element analysis	71
10.1.5 Implications of the chemistry on the ore source	73
10.1.5.1 Intentional alloying of tin bronze	75

10.2 Isotope analysis	77
10.2.1 Results: Copper isotopes - fs-Laserablation-MC-ICP-MS and solution MC-ICP-MS	77
10.2.2 Discussion: Cu isotopes	77
10.2.3 Results: Lead isotopes - Laserablation-MC-ICP-MS and solution MC-ICP-MS	78
10.2.4 Discussion: Lead isotopes	78
10.3 Comparison of potential raw material sources with the Ur copper-based metal	81
10.3.1 Provenance of the As-Ni-copper	81
10.3.2 Provenance of the tin bronzes	83
10.3.3 Provenance of the pure copper artefact 31-17-352T	86
11 The copper-based artefacts: Conclusion	87
12 Beginnings of Silver metallurgy.....	89
12.1 Lead- and silver ores	89
12.2 Smelting of polymetallic ores	90
12.2.1 Roast reduction process:	90
12.2.2 Roast reaction process:	91
12.2.3 Smelting process:	91
12.3 Cupellation of silver	91
13 The silver artefacts: Results and discussion	93
13.1 Quantitative analysis	93
13.1.1 Results: Electron Microprobe Analysis	93
13.1.2 Discussion: The main elements	93
13.1.3 Results: trace elements - nanosecond-laserablation-SC-ICP-MS	95
13.1.4 Discussion: Trace elements	95
13.2 Isotope analysis	98
13.2.1 Results: Copper isotopes - fs-laserablation- and solution-MC-ICP-MS	98
13.2.2 Discussion: Copper isotopes	98
13.2.3 Results: Lead isotopes - MC-ICP-MS	101
13.2.4 Discussion: Lead isotopes	101
13.3 Comparison of potential raw material sources with the Ur silver metal	102
13.3.1 The ore type	102
13.3.2 Comparing Pb isotope signatures of ores with the silver artefacts	102
14 The silver artefacts: Conclusion	107
15 Conclusions	109
16 Abstract / Zusammenfassung.....	113
17 Bibliography	119
A Methods	129
A.1 Documentation of changes in Electron-Microprobe measurement conditions.....	129
A.2 R-Script for Pb isotope evaluation	130

B Analytical Results	135
B.1 Electron microprobe results	136
B.2 Mass spectrometry results	140
B.3 Copper isotope analysis	144
B.4 Lead isotope analysis	145
C Catalogue	149
