Preface to the English Translation	vii
Introduction	ix
Notation	xi
Chapter I. Some Classical Groups	1
1. Siegel sets and reduction in $\mathbf{GL}(n, \mathbb{R})$	1
2. Reduction of positive-definite quadratic forms	7
3. Bruhat decomposition of $\mathbf{GL}(n, k)$	12
4. The Siegel property in \mathbf{GL}_n	17
5. Reduction of indefinite quadratic forms	23
6. A finiteness lemma	27
Chapter II. Algebraic Groups	31
7. A review of algebraic groups. Arithmetic groups	31
8. Compactness criterion	41
9. Fundamental sets (first type)	49
Chapter III. Fundamental Sets with Cusps	55
10. Algebraic tori	55
11. Parabolic subgroups. Bruhat decomposition	60
12. Siegel sets	74
13. Fundamental sets (second type)	79
14. Fundamental representations. Associated functions	84
15. The Siegel property	88
16. Fundamental sets and minima	98
17. Groups with rational rank one	108
Bibliography	115
Index	117
