Introduction to Volume 7	1
Introduction to Behavioral Economics and the Book Volumes	7
1 Some antecedents of behavioral economics	9
2 On methodology in economics	10
3 The experimental method in economics	16
3.1 Experiments and internal validity	17
3.2 Subject pools used in lab experiments	19
3.3 Stake sizes in experiments	20
3.4 The issue of the external validity of lab findings	20
3.5 The role of incentives in economics	22
3.6 Is survey data of any use?	25
3.7 Replications in experimental economics	27
4 Approach and organization of the book	28
5 Appendix A: The random lottery incentive mechanism	33
6 Appendix B: In lieu of a problem set	33
References for Introduction	38

## Part I EMOTIONS

1 Emotions and Human Behavior	45
1.1 Introduction	45
1.2 Visceral influences and the rationality of emotions	48
1.2.1 Visceral influences	48
1.2.2 Rationality and emotions	50
1.3 Cue-conditioned behavior and habit formation	55
1.3.1 Solution to the no-cues model	57
1.3.2 Solution to the cues model	59
1.4 Anticipation and delay under certainty	62
1.5 Fear and anxiety under uncertainty	64
1.5.1 An outline of the framework	65
1.5.2 Life-cycle consumption, portfolio choice, and asset prices under anxiety	66
1.6 Projection bias	70
1.6.1 Preferences under projection bias	71

1.6.2	Habit formation, life-cycle consumption, and projection bias	72
1.6.3	An application to consumer durables	75
1.6.4	Other applications of projection bias	76
1.7	Temptation preferences: a revealed preference approach	77
1.7.1	The formal model	78
1.7.2	Interpreting temptation preferences in a planner–doer framework	84
1.8	Temptation and conflicts between commitment and flexibility	85
1.8.1	First best outcome	86
1.8.2	The optimal commitment solution under asymmetric information	87
1.8.3	Some empirical evidence on self-control	89
1.9	Happiness economics	90
1.9.1	Why should we be interested in subjective well-being?	90
1.9.2	The relation between life-satisfaction/happiness and GDP	93
1.9.3	Other important economic correlates of well-being	103
<b>2</b>	<b>Interactions between Emotions and Cognition</b>	<b>107</b>
2.1	Introduction	107
2.2	Emotions and a two-modules view of the brain	109
2.2.1	An introduction to the two-modules view	109
2.2.2	An illustrative framework	110
2.3	A dual selves model with costly commitment	118
2.3.1	The model without commitment	118
2.3.2	Commitment via a cash-in-advance constraint	120
2.4	Information asymmetries between emotions and cognition	123
2.4.1	The full information equilibrium	124
2.4.2	The asymmetric information equilibrium	125
2.5	Strategic ignorance, confidence, and self-esteem	127
2.5.1	Strategic ignorance	128
2.5.2	Confidence, motivation, and self-esteem	130
2.6	Exercises for Part I	141
	References for Part I	147

## **Part II BEHAVIORAL WELFARE ECONOMICS**

<b>3</b>	<b>Behavioral Welfare Economics</b>	<b>157</b>
3.1	Introduction	157
3.2	Fixing basic ideas	161
3.2.1	The basic framework	162
3.2.2	Direct paternalism	165
3.2.3	Indirect paternalism	166
3.2.4	Libertarian paternalism	167
3.2.5	Effect of other policies	168
3.3	Soft paternalism	168
3.3.1	Libertarian paternalism	169
3.3.2	Asymmetric paternalism	171

3.3.3	A pragmatic approach	173
3.3.4	Some applications of soft paternalism	174
3.3.5	A critique of soft paternalism	177
3.3.6	A note on behavioral welfare criteria	178
3.4	Regulation under imperfect self-information	180
3.5	Choice and non-choice data: What is the scope of economics?	182
3.6	Choice-based behavioral welfare economics	189
3.7	Revealed preference under limited attention	196
3.8	The contractarian approach	202
3.9	Behavioral public finance and welfare	203
3.9.1	Limited attention and tax elasticities	203
3.9.2	Tax incidence under limited attention	205
3.9.3	Excess burden under limited attention	207
3.9.4	A note on reduced-form approaches to behavioral public finance	211
3.10	Exercises for Part II	213
	References for Part II	217

## Part III NEUROECONOMICS

4	Neuroeconomics	223
4.1	Introduction	223
4.2	A brief introduction to the brain	227
4.3	An introduction to neuroeconomic techniques	234
4.3.1	Criteria for evaluating neuroeconomic measurement techniques	235
4.3.2	Single unit recording	235
4.3.3	Electroencephalography and magnetoencephalography	236
4.3.4	Positron Emission Tomography	236
4.3.5	Functional magnetic resonance imaging	237
4.3.6	Manipulation techniques	238
4.4	The neuroeconomics of risky decisions	240
4.4.1	Neural basis of value and risk	240
4.4.2	Reference dependence	242
4.4.3	Loss aversion	244
4.4.4	Non-linear probability weighting	246
4.5	The neuroeconomics of social preferences	248
4.5.1	Computation of social rewards in the brain	248
4.5.2	The neural basis of inequity averse preferences	249
4.5.3	Neural basis of social punishment and trust	252
4.5.4	Human virtues and the brain	263
4.5.5	Neural interplay of guilt and social preferences	264
4.6	The neuroeconomics of time preferences	265
4.7	The neuroeconomics of strategic interaction	268
4.8	Pharmacoeconomics: an application to social effects of oxytocin	271
	References for Part III	274

## Part IV A GUIDE TO FURTHER READING

5	A Guide to Further Reading	285
5.1	Introduction	285
5.2	Temptation, commitment, and self-control	287
5.3	Additional evidence on projection bias	291
5.4	The need for a holistic approach to behavioral public policy	293
5.5	More on the effectiveness of nudges	295
5.6	A consideration of unexpected effects of nudges	296
5.7	Nudges and costs of overriding defaults	302
	5.7.1 Theoretical model	302
	5.7.2 Empirical results	305
5.8	Default nudges and present biased preferences	305
	5.8.1 Theoretical Model	306
	5.8.2 Empirical results	313
5.9	Behavioral public finance	314
5.10	Some fundamental issues in behavioral welfare economics	317
5.11	Some new findings in neuroeconomics	321
	References for Part IV	325
