

Contents

1	Some Mathematical Foundations of Quantum Mechanics	1
1.1	Ontology	2
1.2	The Wave Function and Born's Statistical Hypothesis	3
1.3	The Spreading of the Wave Packet	5
1.4	No Mystery: The Double-Slit Experiment	9
1.5	The Importance of Configuration Space	12
1.6	The Classical Limit	17
1.6.1	Motion of Concentrated Wave Packets	18
1.7	Spin and the Stern-Gerlach Experiment	21
1.7.1	The Pauli Equation and the Stern-Gerlach Experiment	24
1.8	Why "Spinors"?	27
1.9	Hilbert Space and Observables	33
2	The Measurement Problem	37
2.1	The Orthodox Answer	40
2.2	Solutions to the Measurement Problem	41
2.2.1	The Negation of (1) Leads to Bohmian Mechanics	41
2.2.2	The Negation of (2) Leads to Collapse Theories Such As GRW	42
2.2.3	The Negation of (3) Leads to the Many Worlds Theory	42
2.3	Other Alternatives?.....	43
2.4	The Measurement Problem and Born's Statistical Hypothesis.....	44
2.5	Decoherence	46
2.6	The Ontology of Quantum Mechanics	47
3	Chance in Physics	49
3.1	Typicality	50
3.2	Small Causes, Large Effects	52
3.3	Coarse Graining and Typicality Measures	52
3.4	The Law of Large Numbers.....	58

3.5	Typicality in the Continuum	61
3.5.1	Newtonian Mechanics in Hamiltonian Form	62
3.5.2	Continuity Equation and Typicality Measure	65
3.5.3	<i>Typicality and the Statistical Hypothesis</i>	69
4	Bohmian Mechanics	75
4.1	From the Universe to Subsystems	82
4.2	Typicality Analysis and Born's Statistical Interpretation	86
4.3	Heisenberg's Uncertainty	94
4.4	<i>Identical Particles and Topology</i>	96
5	Collapse Theory	105
5.1	GRW Theory	107
5.2	Spontaneous Localization	108
5.3	Remarks About Collapse Theories	114
6	The Many Worlds Theory	117
6.1	Finding the World(s) in the Wave Function	119
6.1.1	Everett Versus Bohm	120
6.2	Probabilities in the Many Worlds Theory	121
6.2.1	Everett's Typicality Argument	123
6.3	<i>Many Worlds: A Brief Assessment</i>	125
7	The Measurement Process and Observables	127
7.1	Ideal Measurements: PVMs	128
7.2	PVMs and POVMs in General	137
7.3	It Is Theory that Decides What Is Observable	143
8	Weak Measurements of Trajectories	149
8.1	On the (Im)-Possibility of Measuring the Velocity	155
8.2	Surrealistic Trajectories?	156
8.3	Wheeler's Delayed-Choice Experiment	160
9	Hidden Variables	161
9.1	Joint Measurements of Observables	164
9.2	Two Assertions About Hidden Variables	168
9.2.1	Von Neumann's Theorem	168
9.2.2	The Kochen-Specker Theorem	168
9.3	Contextuality	170
10	Nonlocality	173
10.1	The EPR Argument	174
10.2	Bell Inequality	176
10.3	Implications and Misunderstandings	179
10.4	CHSH Inequality and the Generalized Bell Theorem	181
10.4.1	Derivation of the CHSH Inequality	187
10.5	Nonlocality and Faster-than-Light Signaling	189

11	Relativistic Quantum Theory	193
11.1	Difficulties of “First” and “Second” Class	194
11.1.1	Infinite Mass	194
11.1.2	Infinite Pair Creation	196
11.2	Field Ontology: What Exactly Is It?	201
11.3	Fermionic Fock Space	205
11.3.1	Particles and Antiparticles	208
11.3.2	Fock Space as the Dirac Sea	209
11.4	Multi-Time Wave Function	211
11.4.1	Time Evolution	214
12	Further Food for Thought	217
12.1	Many Worlds Interpretation of Relativistic Quantum Mechanics	218
12.2	Relativistic Bohm–Dirac Theory	221
12.3	Nonlocality Through Retrocausality	224
12.4	Bohmian “Big Bang” Model	227
12.5	Relativistic GRW Theory	228
13	Epilogue	231
	Index	235
