Preface xiii

Introduction 1

- The data used: the parish registers and their shortcomings 3
- Aggregative tabulations and local historians 5
- The problem of demographic inference from aggregative data 7
- Demographic structure and environment 8
- The unit of analysis 9
- The presentation of results 10

Part 1 From parish register data to national vital series

1. The basic data 15
 - The parish tabulations 16
 - Registration coverage over time 18
 - Completeness of registration 19
 - Patterns of defective registration 23
 - Correcting defective registration 30
2. The representativeness of the data 33
 - A demographic check 33
 - Some indirect checks 37
 - A bias discovered and corrected 45
 - Compensating for differences in length of registration 56
 - The consequences of weighting by parish population size 62
3. Inflation to national frequencies 66
 - The aggregative sample and Rickman's 1836 survey 66
 - The aggregative sample and the parish register returns of 1801 71
 - Incorporating London into national estimates 77
 - National inflation ratios 83
4. From baptisms and burials to births and deaths 89
 - I Corrections for nonconformity and late baptism 89
 - The growth of nonconformity 89
 - The Quakers 92
 - The effects of delayed baptism 96
 - A method of correction 97

Combined results of correcting for nonconformity
and delayed baptism 100

5. From baptisms and burials to births and deaths 103
- II Final inflation ratios: offsetting other causes of non-registration 103
- The use of age data from censuses 103
- Adjusting age data in the 1821 and 1841 censuses 104
- The level of mortality between 1821 and 1841 113
- Early-nineteenth-century net migration 118
- Mortality levels in the early nineteenth century 120
- The censuses of 1801, 1811, and 1821 122
- Decadal birth and death totals 1801–41 126
- Anglican registration in the 1830s 130
- Birth and death totals before 1801 136
- The application of final inflation ratios 139
- Assessment of the new estimates 142
- Retrospect 152

Part 2 English population history

6. Secular trends: some basic patterns 157
- The task defined 157
- The overall pattern of events 160
- Regional variation 162
- London 166
- Comparison with other studies 170
- Population growth 174
- Estimating crude rates of natural increase 179
7. Secular trends: back-projection estimates of population characteristics and vital rates 192
- Recent attempts to make fuller use of parish registers 193
- Aggregative back projection 195
- A comparison of nineteenth-century census data and the results of back projection 199
- Estimates of population size 207
- The age structure of the population 215
- Estimates of net migration 219
- Fertility and mortality 228
- The determinants of the intrinsic growth rate 235
- Back projection and family reconstitution 248
- Proportions never marrying 257
- A simple model of the changes in the components of fertility that led to population growth in the eighteenth century 265
- Sensitivity tests: alternative data sets 269
- Sensitivity tests: migration and mortality schedules 277
8. Short-term variation: some basic patterns 285
- Seasonal patterns 286

- Annual variation and co-variation 305
- Annual fluctuations 309
- Crude birth, death, and marriage rates 310
- Annual percentage deviation from trend in vital rates and real wages 313
- Extreme fluctuations 320
- ✕ Mortality crises 332
- ✕ Mortality crises and monthly death rates 336
- ✕ The timing of mortality crises in England and abroad 340
- The analysis of co-movements 342
- Internal structure within the series 344
- Co-movements between the series 348
- ✕ Summary 353
- 9. Short-term variation: vital rates, prices, and weather 356
 - The data 356
 - Methods of analysis 357
 - Nuptiality and mortality 359
 - Fertility and mortality 363
 - Fertility and nuptiality 366
 - Vital rates and wheat prices 368
 - Analysis by sub-period 373
 - Runs of high prices, threshold effects, and other nonlinearities 377
 - Weather and vital rates 384
 - ✕ Concise summary of conclusions 398
- 10. The economic setting of long-term trends in English fertility and mortality 402
 - Population growth, prices, and real wages 402
 - Mortality fluctuations and real-wage trends 412
 - ✕ Fertility fluctuations and real-wage trends 417
 - ✕ Marriage behaviour and real-wage trends 421
 - The timing of turning points in the real-wage, nuptiality, and fertility series 430
 - Nuptiality and fertility in the later nineteenth century 435
 - The lag between real-wage and fertility changes 438
 - Age-structural changes and the dependency ratio 443
 - ✕ Conclusion 450
- 11. Conclusion: a dynamic model of the relationship between population and environment in early modern England 454
 - The reliability of the results presented earlier in the volume 454
 - Modelling the setting of pre-industrial populations 457
 - ✕ English experience viewed in model terms 466
 - The limitations of models 480
 - Concluding remarks 483

Appendices

1. A list of the aggregative sample parishes and of the names of those who carried out the aggregative tabulations 485

2. Monthly, annual, quinquennial, and decennial totals of births, deaths, and marriages (England less Monmouth) 493
3. Back-projection results: population and net migration totals; age structure; natural increase; net-migration and population growth rates; fertility, mortality, and crude vital rates 527
4. From parish register data to estimated national totals of births, deaths, and marriages (England less Monmouth) 536
5. National population totals: the results of back projection compared with earlier estimates 563
 - Population estimates before 1700 563
 - Population estimates after 1700 576
6. English population totals 1801–71 588
7. Rickman's parish register returns of 1801 and 1841 597
 - The reliability of the 1801 national totals 597
 - County estimates 619
 - Comparison of the 1801 and 1841 returns 624
 - Summary 629
8. English birth and death totals 1841–71 631
9. A real wage series 1500–1912 using the Phelps Brown and Hopkins wage and price data 638
10. Local mortality crises 645
 - Identifying local crises 646
 - The distribution of local crises through time 649
 - The seasonality of local crises 657
 - Local crisis characteristics by quinquennium 659
 - Some extended periods of local crisis mortality 664
 - The causes of local crises 667
 - The geographical spread of local crisis mortality 670
 - The structure of local crisis mortality 685
11. Sequential sampling to estimate the proportion of monthly totals wrongly recorded 694
 - Statistical basis 694
 - Practical operation 695
12. The detection of periods of defective registration 697
 - General strategy 697
 - The reference period 698
 - The test period 699
 - Testing for 'peaks' 700
 - Finding the edges of a 'peak' 700
 - Testing for 'troughs' 701
 - Finding the edges of a 'trough' 703
13. The replacement of defective monthly frequencies 705
 - Interpolation 705
 - Monthly variation 705
 - Replacement 707
14. The derivation of two families of 'English' life tables 708
15. Aggregative back projection 715
 - Back projection 715
 - The derivation of measures of fertility and mortality 730

Testing the technique of back projection	733
Birth and death totals before 1541	736
16. Econometric procedures.	739
Bibliography	741
Index	759
